HURRY and get those bids IN before prices go up!

(not to mention that carnival sideshow now takeing place as
I type this on 14.275 with Baxter grandstanding as usual.....)

And you can be sure that all the
kooks on WWCR, WWRB, WHRI
will make more of this than you can believe.
(....their already doin it FREAKIN BIG TIME with the conspiracy fun
in alt.fan.art-bell like you cannot imagine - sit back, watch em spin and
roll Carl! it's the greatest show on earth - not only on 14.275 Ho-Ho!)

Here is a short message I sometimes send people who are bidding on
"unblocked" scanners on ebay.

Here are the freq ranges you want SPECIFICALLY if you want to tune in analog
cell. This radio will NOT pick up at&t, sprint, or Voicestream (which make
up 95% of the celluar market) because they are DIGITAL and this scanner will
NOT receive digital signals. Got to get a $600+bearcat for that!

Here is the list and ranges!

Cellular Telephone Frequency List

Unlike the rest of the 800MHz band, cellular frequencies are spaced 30 kHz
apart. Be forewarned that it is common to hear XXX language and adult
subject matter on a regular basis. This type of listening is not suitable
for family entertainment. In most areas of North America, there are two
service providers available to the customer.
Service A Service B
824.040 - 834.990 835.020 - 844.980
869.040 - 879.990 880.020 - 889.980
845.010 - 846.480 846.510 - 848.970
890.010 - 891.480 891.510 - 893.970

If it does NOT get these ranges, you will not hear
ANY cellular calls.

Hope this helps you out, and keeps you from
buying something that you expect to do one
thing, bit does another!

God bless!

Scanners sold in the USA by law must have the cell phone freqs blocked (thank you cell phone industry for being a pain in the ass). However, "authorized" users such as police, government, telephone companies, etc. can get a waiver to buy cellphone freq unblocked scanners. Of course it's only illegal to listen to cellphone freqs in the USA. Scanners sold in other countries (such as Canada, Mexico, England, France, etc as examples) are full coverage with cellphone freqs included.

Trunk refers to "trunked" frequencies (I guess you could sort of think of it as a multi-line telephone).

$600+ Bearcat or not, no scanner is ever going to be able to make sense of
digital cellular telephone transmissions.

its called business i thought americans believed in it

do you have any shuttle patches for this current mission????

yes its sad,of course it is,but remember

US and UK troops are about to go to war and kil thousands,thats whats really
sick.

Feb 15 th go and do something useful demonstrate against this war

block roads
go on strike
attack military and police/government workers/defence workers with
paint/eggs/flour anything you can

refuse to pay your taxes

but do something we must do all we can to stop this war

I'm not sure if that's the right way to look at things. It's not just exploring space, its achieving scientific progress in space that can help all the inhabitants of earth. Orbiting the earth is not "exploring space." Sending probes further than the moon's orbit is exploring space.

Good doctor, don't pay any attention to proma. He's a moronic little troll
who likes to stir up crap whenever the mood strikes. The only way he "looks
at things" is thru his rectum, which also serves as the epicenter for his
ramblings.

I am still looking for a complete case or at least the top for a PRO 2006 scanner. They are no longer available from RS parts. Let me know what you have and what you want for it. Reply here or to swlnstuffxxx@hotmail.com after removing the three xxx after stuff.
Thanks Scott

You are a real piece of work, you seem to enjoy either being against everything or trolling. I am not sure which.

I can here the crying and moaning now when the terrorists in your country turn on you and spread anthrax or other deadly virus or chemical agents.

Why oh why didn't the US stop them, They knew about it and let them attack us? This from a denizen of a country that was permitted to kill the poor and minorities for the sake of appeasement. Flunked your history final?

Get a grip, the poor will always be with us, nothing you or I can do about it. The war is to protect your sorry butt as much as it is to protect ours. Live with it!

More poor people have benefited from the space program research than have ever benefited from the bonds of slavery created by welfare programs.

i dont dislike al YANKS,but anyone from any country who supports this war coming up has got to be stopped.

the only way we can do that is withdrawing labour/blcking roads/stopping those who want to work from getting there

destroy world finacial centres,you want war,so yes ou get it hopefully many americasns and british will lose there jobs and wake up and see who is reponsible Tony Blair anf Bush

you cant stop terrorism by war,where in your warped logic does that stand a chance of working???

US are the biggest terrorists and war criminals remember Napalm do you ????

i enjoy attacking anything US

GET YOUR BASES OUT OF UK
GET YOUR BUSINESS OUT OF UK
GET ALL AMERICANS LEAVING IN UK OUT

otherwis they will be attacked in some way,many people in the UK feel the same wa

just look at our Mirror newspaper,the americans are only popular in the eyes of ass wiping new labour and conservitive politicians

yes we thank you for world war two,but does that mean we have to support you every time,dont sound like democracy to me.

but as th US dont know what democracy is then hardly surprising

you only support countries you do business with,if not then you attack

Saudia Arabia and Israel both have weapons of mass destruction and appalling human rights but no mention of them.

if your policies towards the state of Palestine were better and not PRO ISRAELI then the attack on 911 would prob of not happpened.

btw we have had plenty of terrorist attacks in the UK i have been present at 3 IRA bombings again these would not happen if Northern Ireland was handed back to Southern Ireland and the protestants told to put up with it or piss off to UKmainland.

terrorism is because of the faliure of so called world leaders to adress basic human rights problems.

dont need to stop you unless you are involved in the war somehow

but those americans living in uk will hjave a hard time ahead of them.

thats all i say,i just want peace,but if there are those who ont then,there
are non violent means available to deal with those who support war.

I'm only getting local police traffic on the streaming audio, when
I've checked between 3 and 4pm Eastern time Saturday.

war is offensive and any one who supports it is offensive

kill file who you want just shows how undemocratic you are,i thought you
Wanks Sorry Yanks liked free speech

oh silly me,you only like free speech by those who agree with you

Nazi US are not going to control my thoughts and actions and those of
millions of others in UK signing peace pledges and organizing
demonstrations,and indeed there are some free thinking people in the US who
also are opposed to this war.

i hate to be the one who tells you but

PEOPLE DIE EVERYDAY

mostly by inhuman acts carried out by Governments many by US and UK hands

yes its a shame of course it is,but do we have to censor ourselves because
of it.

I am looking for CALTRANS talkgroup ids to program into my 245xlt.

So far, I know that their system is TYPE II (Motorola) / 800mhz but
that's about it.

Is there a place on the web where I could find the codes I am looking
for? Can someone please point me to it? I have found some info
bearcat1.com and freqofnature but that's all.

If you have any tg-ids yoursef, can you please post them here?

Thanks in advance for helping.

I think I will put proma on killfile. Not because of his ideology, though.
It's just whatever he's saying is messed up by his spelling, grammar, and
punctuation, and anything else I missed.

The whole reason the US is doing what is doing is for world peace. These other third world countries want to do what they want (make weapons of mass destruction & enslave everyone around them) & then when someone big enough to do something about it tells them no, suddenly we're bad guys and need to be stopped. Just because your mommy & daddy tell you no, does that make them bad? Should they be stopped? GROW UP!

When the US gives you money to support your sorry, cowardly, impotent ass, because you can't do it yourself. You take it & expect & practically demand more as you want it or need it. When another third world country flexes its muscle and threatens you. You ask and get big brother US to fight your battles for you. When its all said and done you don't even say thank you. Your right about one thing. The US should pull out of these loser countries, seal its borders and tell the rest of the world to go to hell. You wouldn't last long if we did. You try to scare the US by threatening to hurt its economy. YOUR CUTTING YOUR OWN THROATS! If you hurt the US you hurt your self. Nobody else is going to take care of you. What a bunch of ungratefull, impotent, incompetent cowards. Believe it or not the US is doing more & has done more for you, than you or your own parents have done for yourselfs. You all want to come over here, take our jobs, and our aid, then you say thank you by hijacking a plane. Sure there are other ways of dealing with things, nobody wants to go to war, but nobody listens unless somebody (MOMMY & DADDY U.S.) gives them a little spanking.

I am an American. And promo1 is right. 100% right.

I'm afraid of americans.

As the time-worn, age-old saying goes:
"George Bush is the AntiChrist ".

It's not about oil, it's not about Iraq. It's about George Bush's quest for
power.

Here's the bumber sticker that will be on my giant SUV
"My SUV did not attack Iraq: The president that you voted for did."

Idiots.

1672. homebrew "2 component ICOM clone cable"

Newsgroup: rec.radio.scanner
Date: 2003-02-01 22:00:27 UTC
From: Dan Jacobson <jidanni@dman.ddts.net>
Message-ID: <87d6mb3blw.fsf@jidanni.org>
Source record: 37466
Cross-posted to: rec.radio.scanner,rec.radio.amateur.homebrew

http://stevenet.freehosting.net/icom/ has a "2 component Icom Clone & CI-V Cable", which is perhaps the simplest I've seen of these. I plan to connect an ICOM R2 to my computer. Questions: does one connect all the "gnd"'s and the little "brush feet" ground symbols all together? Replace the jack with a mono one--ok, I can handle that. It is a simple circut but still safe for the few things one can do with the R2? Uh oh, what about the 5 volts, wasn't that supposed to come from one of the D9 pins?

I just go into a store with drawers full of that stuff and ask the young man to solder it together for me? (Or take it home and, hark, do it myself.) Thus I will save big bucks over the Parnass-suggested http://cloningsoftware.com/addtocart.cfm?product=CT-29A&price=25& easy way out?

what on earth are you waffling about

the US is invading another country for peace,ok yes believe that if you want,but in the UK we are allowed to think for ourselves and dont have to be subserviant to any world leader.

if the only weapon you have is a plane full of people then that is what you do to get your point across,as they say alls fair in love and war.

you want war,terrorism is the same as war,that does not justify it,its wrong its killing innocent people,something in particular the US has been very good at doing over the years

we did not invade you when just 25 years ago southern states were practising apartheid and oprresion of coloureds,we did not invade when the McCarthy witch hunts were going on,the US is guilty of some of the worse atrocities in the world,but did anyone invade you no.

Do you intend to chuck all Israelis out of Israel or rather Palestine,no thought not

you only have wars with countries you can beat,you run scared of countries that are a real threat,you never invaded the USSR did you?????

lot of hot air that cold war was,but find a country you can bullly and attack with not much oppostion and you go in,and as usual the UK will lose more troops to "friendly fire" than the actual war,you gung ho miliary will see to that.

the USAF routinely fire on shpeherd and there sheep in Iraq as a bit of fun,young kids tending there parents sheep and your cowardly USAF bomb them,the evidence is at the locations of the attacks,John Pilger has uncovered many such incidents.

well done Harold

as said i dont mean to come across as anti US in general,but these things
need to be said,we are just about to enter a major war and i cannot allow it
to pass off without comment on any group i am.

its our world and we only have one

peace to all

How nice of the Pope to drop in.

> I'm afraid of americans.

Why? Most Americans aren't Yanks or even WASPs.

> As the time-worn, age-old saying goes:
> "George Bush is the AntiChrist ".

Bubya is a bumbling puppet who can barely read the scripts that his
advisors spoon-feed him.

> It's not about oil, it's not about Iraq. It's about George Bush's quest for
> power.

More so the corporate backers behind the Bush dynasty: the Carlisle Group
(which had bin Laden as an investor) Searle Pharmaceuticals, Eli Lilly,
makers of vaccine ingredients, Haliburton, Exxon, etc.

> Here's the bumber sticker that will be on my giant SUV
> "My SUV did not attack Iraq: The president that you voted for did."

So the tire-slashers down there think people who drive big SUVs are
Republicans who support Bush's campaign to grab Iraq's oil? How
quaint. But what makes you think that those on the other side of
the class-warfare divide voted for Bush? Your bumber sticker ought
to read:

Iraqis didn't (& won't ever) attack the US:
CIA-trainees did (& will again)

Christ, what an asshole you are ...

You must either be on too much medication or on too little medication,
but you're not functioning properly.

To the rest of you, if you want to see what this little f***er looks
like and how he's been trying to do great damage to the scanning hobby,
you may want to check this link :

http://news.bbc.co.uk/1/hi/uk/2065342.stm

Regards

Peter

why is that too much near the truth???

read in the UK paper the "Mirror" it states the same,the US has never been
so unpopular

the lying of your governments of past and present have made the US the
worlds laughing stock,of course our Tony Blair loves US,but at least France
and Germany are thinking more rationally.

regards

not that old crap again

the BBC are just part of the UK establishment,look at Paul Wey on a google search and you will see me on many websites across the world thanks to the BBC,never been so famous before

i now charge for my autograph[lol]

i have not damaged scanning at all in the UK,where is the proof of that HMG did not care so why should the BBC.

in fact in the US they would not of even cared about what i do in regard to scanning,so well done for that at least.

i run the UKs top scanning sites and publish frequencies,and in that the US are freerer,but life is not all about scanning,there are serious issues out there an sometimes they need discusssing.

if you are unable to discuss freely then i feel very sorry for you

you dont have to agreee with me,just start thinking for yourselves,dont take it too personally,for me its just a bit of a way of kicking off te days problems,without violence.

so we can agree to disagree surely??

Heroic astronauts do *NOT* die everyday. Not people that are risking their lives for the progress of science and technology...

...Without them, you wouldn't even have a 'home computer' sonny. Don't start blaming governments or politics. It's a terrible accident....it's an awful thing. Show a little compassion.

Mike

It's definitely not aimed at public service monitoring. Designed to replace
the AR3000A with gov't and military users.

So, George goes to the trouble of posting and letting us know he has some interesting final comms from Columbia and this is the thanks he gets. That's gratitude for you.

War, Anti American nonsense, Nazism.

George, I've visited your webpage many times and you've given me some tips on Military Com scanning...you deserve much better than this garbage. Please, continue your good work...maybe just leave it on your website and the people that find it will appreciate it. Your selfless act of posting here seems to have caused more trouble than it's worth. (Not all posters were rude, but it got very ugly)

Thanks again
Mike T.

you don't sell debris, but you certainly ARE debris. I predict your
auctions are going to get, oh, a few hundred bids that will run off
any legit buyers. of the successful bidders, you will never hear from
them again.

I would hope that to be not true. I expect "some" Muslims (those
radical extremists that simply hate all and anything American)
to probably rejoice, but not "all". I pray I am right.

another person against democracy.

who were those astronauts helping???????????

overpaid for a start doing a completely worthless job,yes sad they have died
but accidents/murders and deaths happen every day,why get excited over some
more.

will wait for ever for someone on here to say how sorry and sad they are
when US weapons hit a childrens hospital in Iraq

it will suddenly be tough luck

why will they lock me up,i have not done anything wrong,just expressed my
opinion,again americans do not like such freedom of expression.

as for going to the US,i m not that sad to want to visit,there are more
interesting and more important countries to visit.

the world does not end at America,even though every president you hav had
seems to think so.

had to read my comments again there,but as expected i said "non violent"

last week 50 anti war demonstrators cut the fences at USAF Fairford one of your bases in the UK

the intentions are to block the runway with protestors in the event of war breaking out i understand.

there is no way enough police/security could be found to ring the entire base and after last week invasion of the base i guess it will be quiete easy to do again

peaceful demonstration is the way to go,unfortunaltely Blair will send his bullly boys out for the demo in London on 15 th Feb,and already has stated a planned meeting in a park will not be allowed,so by saying that and denying free speech if any rioting does occur that day,then its al down to him and his bully boys.

i hope though it will be the opposite and be 100 % peaceful

You weren't hearing police traffic but NASA security. I don't have
standard Police/Fire freqs in my scanners just NASA and MilComm stuff....

Oh, you've got to be kidding me!!!!!!!! Where do you assholes come from.
Whatever hole you came out of, crawl back in you gutless bastard.
An excuse for war, you sick bastard.
God be with 7 astronauts and their families.
GOD BLESS AMERICA!!!!!!!!!!
ONE NATION UNDER GOD!!!!!!!!!!!!

How serious are we supposed to take a fat ass loser who still lives with
mommy and daddy.

Get a job, then come back and maybe we will condescend to speak with you.

Pilot: Ahhh Tower this is Air Force 218 heavy, I think I just hit a
protestor.

Tower: Roger on the protestor, turn right at the intersection.

Do you think that those of us capable of bombing woman, children, and the
poor as you assert, would blink at running over your stupid butt with an
airplane.

oh dear you are getting off the subject

for your information i do not intend to get a job and pay taxes for a war i
dont support,i have only been out of work a few months.

i actually have a dissability so at moment cannot do paid work,but do
voluntary work when possible.
which is why i live at home,so there.

whats wrong with that anyway,many people in UK live with there parents for a
long time,i have been away an now back again.

which is much more rewarding than any paid job i have had.

as for loser,i can scan and play on the pc all day,not much money but peace
of mind,i stay with friends across the UK and go scanning around with them.

i have had jobs where i have been paid purely to scan.

I have owned one for years. Some MODS were required to bring the radio up to my satisfaction but after the mods all is well. Still
own it ... 4-1/2 years later!

Obviously, if you consider it a "waste", you have no clue as to what you are talking about. The space program has been the greatest BARGAIN as to what has come out of it, versus what it cost, ever. The PC you are typing on owes a big part of itself to the space program.

Get a clue..

I would bet scanners are working overtime in eastern TEXAS and western Louisiana today and in the coming days.

FBI, CIA, FEMA along with all the state, county and local emergency services.

OK got the software (Thanks Guys !)

Now do I need a interface with a PCR1000 ?

Or will the Icom PCR1000 do it for me ??

Thanks for all your input !

although I don't doubt for a moment that it's possible to make up your own cable, risking damage to an expensive scanner is a danger I can do without! That's why I bought the cable for $25 + 5 shipping, and consider it worth the money! Having one has made my R3 radio so much easier to use!

guess he forgot about the battle of britain. the germans had to 'get
their point across', and the british stopped 'em cold.

but this gutless coward would have welcomed goering with open arms. to
him, neville chamberlain was a hero.

>
>
>you want war,terrorism is the same as war,that does not justify it,its wrong

uh, it's the colonialists...the europeans...who fucked up the world.
not the US. sorry.

>
>we did not invade you when just 25 years ago southern states were practising
>apartheid and oprresion of coloureds,we did not invade when the McCarthy
>witch hunts were going on,the US is guilty of some of the worse atrocities
>in the world,but did anyone invade you no.

meaningless. the US never had an empire like you europeans did. iraq
is a creation of the british. syrian is a creation of the french. look
at what's happening in the ivory coast today. the french are,
literally, being run out of town, while PRO american protesters ask
for help at the US embassy.

moron.

Thats calling the kettle black.

> the US is invading another country for peace,ok yes believe that if you
> want,but in the UK we are allowed to think for ourselves and dont have to
be
> subserviant to any world leader.

Then think for yourself, it remains to be seen. You have no idea what
freedom
and luxery we live in and experience on a daily basis. As far our leader
goes.
We voted him in office, something you wouldn't understand.

> if the only weapon you have is a plane full of people then that is what
you
> do to get your point across,as they say alls fair in love and war.
> you want war,terrorism is the same as war,that does not justify it,its
wrong

Its fair when you do it. If anyone else does it, its wrong? Poor baby!
Look us
in the eye, stand toe to toe with us when you attack us. I guarantee you -
you'll
lose. The outcome would be pure suicide on your part. Thats why it was
done
the way it was done. Talk about cowardly.

> we did not invade you when just 25 years ago southern states were
practising
> apartheid and oprresion of coloureds,we did not invade when the McCarthy
> witch hunts were going on,the US is guilty of some of the worse atrocities
> in the world,but did anyone invade you no.

Because they were doing it too? We corrected ourselves. Something other
counties
are refusing too do, even after promising they would. You have to be able
to invade.

> Do you intend to chuck all Israelis out of Israel or rather Palestine,no
> thought not you only have wars with countries you can beat,you run scared
of countries
> that are a real threat,you never invaded the USSR did you?????

USSR lost the cold war. We distroyed them at thier own game. We kicked thier ass &
destroyed thier economy. End of story. We aren't at war with Israel or the Palestines.
Were at war with terrorists who manufacture weapons of mass destruction. Who refuse
to live in peace with the world. Who refuse to keep their promises. Who want to destroy
anyone who won't join them. We went to war because the losers attacked us.
Get your facts straight. What was that I read about you being a threat to your own countries security?

> the USAF routinely fire on shpeherd and there sheep in Iraq as a bit of

As far as I know, CALTRANS doesn't use a Trunked system, but a conventional 800MHz radio system. At least, that's all they use in Northern Calif. I will try to check on this Monday; perhaps there is some trunked operations in Southern Calif. and in the SF Bay Area.

Cuba, Panama & Liberia were creations of the U.S. while many other Latin American countries were recreations of the U.S. And if you include the Philippines, Hawaii, Alaska, Puerto Rico prior to WWII, that was enough territory to qualify for an "empire". In fact, it was enough for the U.S. to avoid the depression, or at least to avoid having to close the banks due to insolvency, by selling the Philippines to the Japanese, Puerto Rico to Mexico, and the Alaskan Panhandle to Canada, as well as insisting that the Allies not stop payments on their war loans from WWI (the exception being Canada which was stupid enough to pay off its war debt to the U.S.). Instead the U.S. tried to keep it all, rather than try to raise money to pay off their own debts. Since they could not pay off their own debts, they had to let other countries off the hook as well. Alistair Cooke gave a good talk on how the closing of the banks affected him in the spring of 1933. The BBC might rebroadcast that talk this spring seeing that it'll be the 70th anniversary of the great bank closure that demonstrated the true 3rd world status of the U.S. (It should be noted that at that time Argentina was doing quite well and did not have to close its banks; in fact its economy never went through a depression in the 1930s).

1737. Decoding packet radio with a PC sound card

Newsgroup: rec.radio.scanner
Date: 2003-02-02 04:30:05 UTC
From: tpzxr5@hotmail.com
Message-ID: <742b4e94.0302012030.360e255b@posting.google.com>
Source record: 37420

Can anyone point me to a site (or thread) that would help me understand how to decode packets received on my scanner, then connected to the mic input on my PC via the discriminator port on my scanner. I know it has been done before and have had some success by tapping into the bit stream using the waveIn* functions. However, I am lacking the knowledge to "decode" the data at a certain baud rate and making any sense of the bit stream.

thanks for any pointers (no pun intended)

Hey you over there in the old country. So you figure that anyone who
supports war is offensive?

Think back to when Hitler was buzz bombing London and the southern part of
England ol' chap.
That was before the American boys came over to help out British, Canadian
and the French/Dutch
underground to try and keep that bastard Hilter in check.

Alot our Canadian boys died to keep Hilter from overruning the UK during the
time the Yanks were
deciding to help out.

>
>
> kill file who you want just shows how undemocratic you are,i thought you
> Wanks Sorry Yanks liked free speech

The neighbours south of The Line do like free speech and they can say
anything they want, so why would that bother you?

>
>
> oh silly me,you only like free speech by those who agree with you
>
>
> Nazi US are not going to control my thoughts and actions and those of

> also are opposed to this war.

So all of those Labour Party peaceniks are going to do their own bit by
parading down The Mall and perhaps daring to
blockade the M1? Get real, mate. There's peace demonstrations by the left
wing nuts over here in Canada (mostly by Socialist Workers International and
the New Democratic Party).

Most Canadians are with PM Tony Blair and George Dubya, but only if there's
one last chance given by Saddam to get smart.

My thinkin' is that the Yanks down there are still pretty angry over the attack in New York by those punk terrorists, and even the Ozzies are pretty bloomin' mad over the attack on their own citizens on vacation in Bali. Saddam is going to get a real shit kickin' pretty soon from the U.S. with support from the British.

Been to the U.S. many times and I would hardly call the Yanks nazis. Us Canadians get a little steamed about the antics of our southern neighbours sometimes, but most Canadians are thankful the U.S. is there and to have them as neighbours.

So why would those who sign those idiotic peace pledges be able to control the thoughts of other British Subjects that decide that while no one wants war, sometimes it is nessesary to get rid of a tyrant?

What are you some left wing socialist that is so left wing that it makes Labour Party leader Tony Blair look like Maggie Thatcher or something?

Also, I'd work on being able to spell too, sport. Your spelling is horrible. Your English is worse than the corruption of real English I see coming from the United States.

God Bless the United States, and a toast to the Commonwealth.
From Canada.

It all depends on how you look at it. The shuttle has only been used about
28 times and the total for all the shuttles is only slightly over 200 trips.
That means every 50 trips or less you have a fatal accident.

Bert
I listened to some of the Ten-Ten contest today. I don't have
a number so I didn't try to join in. How did you do in it?
BTW I heard about the accident during the Mid-CARS net
on 7258 kHz, I wasn't watching any TV today either.

Well it's still safer than riding a commercial airline anyday.
And magnitudes safer than driving a car. Two failures in 20 years..I want
one to drive to work in!
7 people died..sad and condolences...but it isn't even the easter road toll
in one state in one year..disaster?...
Perhaps the conspirators believe that car manufacturers pre program failures
in to people and motor vehicles too?

BC780 in excellent condition. Never been mobile, this is my nightstand scanner. The only reason I'm selling it is so I can get the new 785D. With all original accy's, manual, box, antenna, etc.

$250 plus shipping.

Digital pics on request

No trades.

Thanks,
Jon

^ ... how to decode packets received on my scanner, then
^ connected to the mic input on my PC via the discriminator port ...

I haven't looked at it yet but it appears that there is some freely usable
code that may save you a lot of work. Look through the downloads at
TrunkedRadio.net for the file CAPTURE.ZIP:

<http://www.trunkedradio.net/modules.php?name=Downloads>

The file README.TXT from the archive:

```
========================================================================
CONSOLE APPLICATION : capture
========================================================================

AppWizard has created this capture application for you.

This file contains a summary of what you will find in each of the files that
make up your capture application.

capture.dsp
This file (the project file) contains information at the project level
and
is used to build a single project or subproject. Other users can share
the
project (.dsp) file, but they should export the makefiles locally.

capture.cpp
This is the main application source file.

/////////////////////////////////////////////////////////////////////////////
Other standard files:

StdAfx.h, StdAfx.cpp
These files are used to build a precompiled header (PCH) file
named capture.pch and a precompiled types file named StdAfx.obj.

/////////////////////////////////////////////////////////////////////////////
Other notes:

AppWizard uses "TODO:" to indicate parts of the source code you
should add to or customize.

/////////////////////////////////////////////////////////////////////////////
```

Hi All,
Here's a question for all the experts in the group.
What is the best antenna for the BC200XLT? I am presently using the "rubber duckie" antenna that came with the scanner, but it is somewhat lacking in certain areas. Does anyone have any opinions/ideas on where I can get an upgraded antenna for this scanner? I Use it for both regular and 800 mHz scanning. Any feedback would be greatly appreciated.
rgds,
Mark S.
p.s. thanks to all who responded to my request for a replacement battery/holder. The advice I received was VERY helpful....

what on earth has Saddam Hussein got to do with 911,there is no link

would not be surprised if your Bush and CIA were invlolved in organising 911 so as to start a war,Bush wanted a war from the start,and has made no effort for peace.

he is the same as Hitler,wants to take over the world,and impose your morals on other countries.

this war is about global domination and nothing to do with terrorism,which it wont affect anyway

terrorists a plotting as we email here,something a lot bigger than 911 is bound to happen in UK or US regardless of Saddam being overthrown

human rights in Afghanistand have not improved and unlikely to do so in Iraq,and of course the US will install a leader for Iraq who just happens to support US business

if you are worried about human rights invade Russia,human rights have not improved since the communist days,but of course as McDONALDS are now in Russia and a whole host of other US businesses those rights do not count.

as for UN resloutions,there are thousands of them being ignored,what the US doing about them,nothing,certainly not doing anything about the illegal state of Israel.

if i have to make a choice and support uk government or so called terroroist then i will have to choose terrorrist,which is a shame but there is little choice.

governments are happy to spend billions on war but not the country they are supposed to represent.

that is sick

yes i agree on that

the biggest problem maker was our LLoyd Geoarge

Yugoslavia
Kuwait and other arab states
Northern Ireland

all created or sanctioned by that twit,and yes other european countries.

world war two,completely differant although it would not of happened if we had not dessimated Germany after world war one with unrelaistic reparations,which allowed Hitler to gain support.

but yes he clearly invaded other countries and action was taken that is ok,i know many peace campaigners who would still disagree,but that in my opinion is fair,if Saddam attepmt to use such weopons of destruction them i hope we will be able to shoot any such weopon out of the sky,if not why????

supposedly anything moving around Iraq is spied upon,so Saddam launches we shoot out of sky,then yes we go in,fair enough,but to go in on the current terms is wrong and re writes the history of war,by thr same token Saddam could re invade Kuwait,because he feels there might be an attack.

Or indeed invade the US on the same basis,the US wants to police the world on its own terms and does everything it can to destablilise countries it does not agree with even if the people of that country have voted in a particular regime.

no more,after all Osama was trained and funded by the US,what did last years outing to Afghanistan prove,the US and UK certainly won nothing out of it,Osama and his people are still around.

Am I to gather from the above that your vision of the enlightened democracy
of the future dictates the abandon of all conventions of spelling, punctuation
and grammar? Pathetic ignoramus!

1766. HB232 / CE232 Interface help needed

Newsgroup: rec.radio.scanner
Date: 2003-02-02 16:00:11 UTC
From: Steve Reitter <sreitter@DELETETHISrcn.com>
Message-ID: <b1jfaj$q99$1@bob.news.rcn.net>
Source record: 37349

I have a hb232 / ce232 from the early 1990's. My scanner died due to to circumstances unrelated to the interface. I recently got he scanner operational but cannot find the software which came with the interface. Does anyone have a copy of it they can send me?

I am not looking for any of the "after market" software for this and the Optoscan products. I am solely the software which came with the interface kit. With the loss of Bill, his website is gone as is his company (a loss for all radio enthusiasts) so it appears I cannot locate this software any other way.

Once I confirm the radion is 100% and the interface works I may consider upgrading to an after market program but hate to shill out my money before knowing if everything is A-OK.

Thanks

1768. AR8600/8200 control software Ar86ctrl v1.20 BUGFIX

Newsgroup: rec.radio.scanner
Date: 2003-02-02 16:22:03 UTC
From: kbo <kbox2003@t-online.de>
Message-ID: <5ogq3v0oqs38d0k9fh50mmhmfo2idv3bkj@4ax.com>
Source record: 37351

Hi,

I have found a bug in the last release of my scanner control
software Ar86ctrl v1.20. In this version it's not possible
to store settings you made in VFO-mode to a memory channel.

That's too bad. I have released a new version v1.21 where the
bug is fixed. Some new features are also added:

- set opening message
- set beep volume
- set LCD contrast
- list and list selection mark now stay on last entry after a
delete, add, copy operation on a memory bank.

Get the new version at:

http://www.an-netz.de/home/kbo

sorry.
Klaus

Hi William, (Bill?)

I don't have a number either. That's the reason I worked the contest. Each
contact gave the other station a point and I got to log another Ten-Ten

number for my membership. I'm not a contester, it was just fun for me. I "casually" worked (...or attempted to work, hihi.) 30 or so stations. Take care now.

Hi all,

Everywhere on the net i find the same mod that enables the UBC2500XLT to receive cellular phone frequency range.
I have a 2500XLT where this range is already open. The range that is missing in mine is between 550 and 760MHz.

Is there any way that i can have this range open also.

So i'm looking for a way to open the full 25-1300MHz range.

Thanks for the help,

Ton.

>
>Cuba, Panama & Liberia were creations of the U.S.

none of these was occupied by the US. they were not colonies. sorry.
and cuba's been communist for 40 years. hardly proof of US
colonialism. castro took over in '59. at that time many african
countries were still european colonies.

again your history is faulty.

while many other Latin
>American countries were recreations of the U.S. And if you include the
>Philippines

the philippines is a free country. you think they should still be part
of spain? you're a colonialist, not the americans.

The BBC might rebroadcast that talk this spring seeing that it'll be
>the 70th anniversary of the great bank closure that demonstrated the true
>3rd world status of the U.S. (It should be noted that at that time
>Argentina was doing quite well and did not have to close its banks; in
>fact its economy never went through a depression in the 1930s).

so how will getting rid of Saddam stop any terrorist

no arrested terrorist so far have come from there,and so what if they did,terrorists come from all over,you going to wage war

if you can see the BBC now there is a programme on the coming war

our journalists and members of the public just do not believe what Bush and Blair are spouting and indeed many military and intelligence do not see any link between terrorism and Saddam

this war is going to spur terrorist attacks,and poss civil war,there is no way many people in the UK are going to let Tony Blair get away with this war,so people must do what they see as right to show there disgust at this war.

and if that means taking it out on americans in the UK then so be it,no violence

paint/egg/flour/human piss and shit attacks as they come out of hotels or visit tourist attractions.

blocking roads
breaking into military establishments and government buildings

all of these may take place if war goes ahead

if you can find a post that said negotiate i will eat my laptop

there is not one,what are you on???????

genocide yes we have to fight against that,but Iraq is not the only country
guilty of that,and the CIA have done many such things and daresay us Brits
have as well,i dont support any country.

i belive in a world thats free from country boundaries

1798. Re: UBC2500XLT full range mod

Newsgroup: rec.radio.scanner
Date: 2003-02-02 23:05:55 UTC
From: klarrg@aol.com
Message-ID: <20030202180555.15688.00000473@mb-fw.aol.com>
Source record: 37381

Hi all,

Everywhere on the net i find the same mod that enables the UBC2500XLT to receive cellular phone frequency range.
I have a 2500XLT where this range is already open. The range that is missing in mine is between 550 and 760MHz.

Is there any way that i can have this range open also.

So i'm looking for a way to open the full 25-1300MHz range.

Thanks for the help,

Ton.

The 550-760 range is deleted from this scanner and NOT restoreable..period. If the radio REALLY WAS a UBC-2500XLT, the cell range would ALREADY Be unblocked, so it is nothing more than the NON-restoreable USA version.

1799. What's in my cornfield - Please visit my Ebay auction -

Newsgroup: rec.radio.scanner

What's in my cornfield is mine - I don't care if it is a tail light or a nose cone.

If the government wants to drop helmets onto my chickens - the helmets are mine.

Therefore - Please visit my Ebay auction - I'm cleaning out my garage - and my front lawn - and my cornfield.
Why am I telling you this?

If the government wants to send radio signals or cell phone signals thru my body or my house then the radio signals are mine to listen to.

If the Government drops an in-flight urine collection absorber (IUCA) near my mother-in-law, the are are certainly welcome to buy it back from me on Ebay.
They are damn well going to pay me the postage to ship this crap back to Fort Nasa.

Emilio Goldstein

>did,terrorists come from all over,you going to wage war

the US can wage war on anyone who attacks US interests, and an
interesting sideline, government sponsored or harbored terrorism
against another country is an act of war. so by sponsoring such,
approving of such, or sheltering those who patricipate in such
activities have declared war. Saddam publicly praised the attacks on
09/11, he has supported Bin Ladens group.

>
>

I am not a war loving person myself, but after what I saw and dealt
with in my 3 months in NYC heping out after 09/11 I think the people
who were involved, and those that supported them, be it financially,
logistically, or by giving them shelter deserve to be punished.

And by saying that, you or those who participate in those actions are
eing violent, which you just said you are against. That my friend is
the definition of hypocrite. And breaking into a military base could
lead to serious trouble especially in these times.

and if that means taking it out on americans in the UK then so be it,no
violence

paint/egg/flour/human piss and shit attacks as they come out of hotels or
visit tourist attractions.

blocking roads
breaking into military establishments and government buildings

all of these may take place if war goes ahead

The "best" antenna ??? That depends on what your requirements are.

I use the Diamond RH-77. It's a "dual band" ham radio antenna but it has
good reports as a receiving antenna. However, it is about twice a long as
the standard rubber duck, so it's not for everyone.

Richard in Boston, MA, USA

Not to get picky, cutting the fence on a AFB is pretty dumb.
About 30 miles south of where I live the US Army has a base
where ancient (WWII ventate) nerve "agents" are stored.
The security peoeple there will shoot to kill, no verbal
warning. I suspect if you people try this at a base with
nukes you will die. In a hurry. Very fast. Nuke guardians
do not take names, they just shoot to kill.
To stay peacefull, you might want to just block the entrance.
Your life, your choice. Heck take your kids and if you get real
unlucky you could be this years Darwin Award winner.
If you really want to stop this war, figure a way to get Sadam
to leave before the bombing starts. I suspect this is a lot like
a TV crime drama where the DA offers a plea bargin. He has one
chance to save his skin and spare Iraq a lot of pain. At this
point I doubt that even if Labor managed to unseat Blair, that it
would stop the nightmare in waiting.

Typical... most nutjob conspiracy theorists don't think that any major event
just happens, it's always part of a massive dark conspiracy. Kind of the
way they were all saying that the 9/11 terrorist attacks were all planned &
carried out by the government.

It was my understanding that shuttles reentering the atmosphere are always
visible and sonic booms are heard, so I didn't think the article was all
that creepy. However, it does kind of give a sense of foreshadowing of
yesterday's tragedy.

From: olin_broadway@hotmail.com
Message-ID: <4e0b25e1.0302022240.5d852579@posting.google.com>
Source record: 37308

Please bear with me. I am completely new to trunking receivers.

Can someone tell me what frequency ranges are included in the pre-programmed service scans? And, does it follow trunked systems in this mode?

I have an old BC760xlt and use the service scan while traveling. It was great until so many agencies went up to the 800mhz band.

Also, while I'm at it, I've been really having a hard time deciding what I want to purchase in a new radio. Truth to tell I'd rather have something that offers a true wide-range coverage with PC control. Maybe something like the AOR AR8200 MK III

But I need the service scan feature to use while driving. That being the case, what is a good radio to get that would compliment the BC785D's capabilities and yet not duplicate any more than necessary. (Trying to save money here)

If this is a dumb question then so be it. :)

Thanks

You need to tune into the base station. You won't hear jack if you're just tuning into the head set. Try doing a search for cordless phone frequencies on the internet.

JUST A NOTE TO EVERYBODY. Before posting in here, please search the net first. Most of your answers are available online.

>chance of working???

By UN definitions state sponsored terrorism is an Act Of War.
Afganistan refused to turn Bin Laden over to US authorities for his
despicable acts of cowardice and they got what they deserved. Saddam
openly supported Bin Laden and his group, and applauded the 09/11
attacks and that falls into the definition of state sponsored
terrorism.

Then I suggest you start being sensible and stop being racist. "Get ALL Americans out"? "Throw human piss and shit"?? You really are on the same page as the guys that go around beating up people because they're black. You are ignorant to the extreme.

I am not an American, I am British, however if this is the way (as you indicate) the British are to treat our friends in the US - I will denounce my heritige and citizenship today and leave for their sane shores.

So I agree, let's talk about the war, but DO NOT pretend to represent the British with this.

Whilst it may not be my place to do so, I would apologise to any Americans offended by this man, on behalf of the majority of British who love and respect the American people - regardless of whether they agree with war or not.

i bet i represent more Brits than you do

just look at the news and the polls the Yanks are getting more unpopular everyday

In the US you cannot even talk about being anti war without some so called Nazi patriot calling you a traitor

US biggest class and fascist country in the west.

what is the differance between Hitler invadin Poland and Bush invading Iraq???

as for Saddam suporting Ossama,you must be on drugs they hate each other,you really do believe the shit your fed in the US.

the CIA were responsible for funding both Saddam and Ossama,real clever that was wasnt it.

wow,what next??

> Dataslicer is a new term ? could you explain a little more ?
>
> Tim

A "data slicer" is a comparator. Most often an audio opamp connect
so that is either on or off. It converts the low level DC pulses from
the discrimanator out (I think it is lable packet out on the PCR1000)
into higher level signal that can be routed to the PC for decoding.
The software looks at the zero crossing points to determine how long
a pulse lasted in what (on or off) condition. From the number of mSec
or PC clock cylces the pulse takes, it can be determined if the pulse
is a 1 or 0, or how many 1's, or 0's the pulse is.
Back in the early 1980s I used a similar setup with a TRS80 to decode
AX-25 transmissions. The real magic is not in the "data slicer",
but it is the software that measures the pulses and produces data that
it displays. Data slicers come intwo main flavors. Bipolar (+/- 5~12V_
and unipolar(0 or 5V). The bipolar is the most common.
This is an oversimplified explanation but it is complete enough to steer
you in the right direction.
Terry

Excuse me, but who the fuck are you? Did you just name yourself moderator of this group? Notice the name of this group, asshole. It's rec.radio.scanner. That means topics about scanner radio and what you can listen to with them are fair game in this group. Want to make the rules in a group? Go start one of your own and have a fucking ball.

I guess he can't figure it out? I dunno, WGAF anyway? I have yet to see anyone who replies to these posts (including me) actually make a bonafide offer to buy. Usually they just harass the seller until he gives up and takes it to ebay and then ppl still harass them even then. If I wanted to sell my radio I'd just ebay it and not even announce it on usenet - gives the trolls too much to do.

HOWEVER: My BC250 is most certainly NOT for sale - so get yer own! ;-)

I have added a very simple but effective home made, wide band scanner
antenna project that was submitted by Mark (one of the My World Page
readers) to the website. You can access the page directly at:
http://miked2000.home.mindspring.com/dipole.htm

or you can find a link from my website under the 'Work Bench page". Take a look and let
Mark know you saw his project by clicking on the mail
link on the page. If you have any questions or comments please send them directly to Mark.

Visit The My World of Radio Website at:
http://miked2000.home.mindspring.com/radioindex.htm

Visit my Work Bench page for this and other exciting scanner / ham
projects.

---------- Original Message -----------

Hi folks,

I have a handheld scanner. From my location I have a hard time picking
up signals such as NOAA radio broadcast and can only pick up some
airport freq's occasionally.

I replaced the rubber duck antenna with a whip antenna. While it did
not make a huge difference in the house, I can pick up the NOAA while
standing out on my deck. This lead me to thinking about outdoor
antennas for my scanner.

I live in an apartment so I need something small and understated. I am
curious what options I have and what everyone would suggest?

Thanks!
Bryan

if the cap fits wear it

the US is responsible for so many inhuman acts.

PISS AND SHIT is not violent,you think you can do what you want i am saying
there are others who think the same

i did not say i was going to do these things i said that people are planning
to if the war goes ahead

today there was another demo at a US base and also Greenpeace blockaded a
military ship in Souhampton port for 2 daysthe actin has started already

everyday something will happen and on Feb 15 th i would hate to be an
American in London,direct action will be the order of the day,no violence

The Bonito software requires a speical hardware connector in line with the serial cable. What you are advocating is not legal anyhow. If we want to keep the scanner hobby going you will not do stupid high school things like looking for "warez". Patronize the people who work hard to program good software.

you are hearing the headset as it broadcasts to the base. You need to tume into the base it is much stronger, and carries both sides.

One of the freqs is usually in the 926-929 range and the other is at 925 -930 i think

Fer cryin out loud....

Whats the matter - has ESN snatching been harder to do since the switch to digital cellular? I mean what other use could you have for it?! You really *want* to hear "Do we need milk at the store?"

I doubt anyone in here is both A: Smart enough to figure it out and B: dumb enough to tell you. Maybe one or the other but not both.

Then again... you never know.

You can't service search trunked systems. What you can do if the state system is a motorola 3600 baud, is put in the control channels statewide and then control channel search. gill

**********Price Reduction **********

I am selling my MINT condition Uniden 780 XLT scanner. This scanner has never been mobile, and is in a clean, non-smoking environment. It includes the manual, and all included accessories, however the box has been lost. The scanner will be well packed for delivery via USPS Priority Mail, insured.

$225.00 plus 10 bucks for the shipping. US buyers only.

Please E-MAIL if interested. If you reply here, I may not see it for a day or two.

Dan

No way that was a 10.

I can't believe it was really posted by Emilio. (Anyone familiar enough with Emilio's headers to be able to tell?) His posts are usually very well written, and tell a tale that leads to something patently absurd. Almost classic shaggy dog stories. This was just a clumsy rant. Not even as entertaining as the rants by the... the... the individualists, yeah that's the ticket - individualists - who are serious about this kind of thing.

Someone, not me, suggested that the Israeli on board had something to do with the shuttle crash. It went something like this:

Some have tried to force Israel to accept a Palestinian state and they won't do it. Perhaps by dumping one Jew's mangled body right in the middle of, or as near as possible to, Palestine (TX) the one worlders can get their message across to the Israeli leaders! (That they intend to force a Palestinian state.)

It's just something else to think about, if you don't believe that everything happens by accident.

Al

If the ARRL even REMOTLY offers ANY SUPPORT
WHATSOEVER to this Orwellian proposal by K8AD
than it will signal the **DEATH KNELL** for ARRL.

Anyone (...and I mean anyone) who would lend their
support to this insane proposal is aiding totalitarian
style controls to the private ownership of a radio
transmitter.

I wonder if K8AD went to the "Soviet Gulag School" of
Ham Radio? The Govt. or anyone else has no damm
business AT ALL knowing what makes and models of radios
I may purchase or own G-DDAMMIT!

What the frig? Are we to now have HANDGUN STYLE
Registration Requirements for Ham Radio and CB Equipment???

IF THE ARRL GOES ALONG WITH THIS PROPOSAL -
IN ANY CAPACITY WHATSOEVER, YOU WILL SEE THE
BIGGEST ABANDONMENT OF ARRL MEMBERSHIP
SINCE THE INCENTIVE LICENSING DISASTER OF
THE 60's and 70's.

-----> Do not support or touch this proposal W1AW - unless you
want to go the way of the Spark Transmitter and Rotary Dial Telephone.

Of course you won't do them-you're the typical pUKer chickenshit.

You seem to have convenient memory-what's that old saying you used to have?

"The sun never sets on the British Empire" Or does your point of reference
for barbaric acts only go back so far?.

Was polishing motorcycle in driveway one day. Car drives up and couple get out. Look at motorcycle then fellow asks if peculiar antenna on roof is mine. I say "Yes." Out comes papers. "You have been served." Went to court with Order for judge to sign requiring Plaintiff to reimburse me for time off and costs of researching law at law library plus travel and meals and listed miscellaneous expenses. Judge signed, they balked. I said, "Pay up or I freeze all accounts and assets." The rep of company asked judge if I could do that. Judge answered in the affirmative. They paid.

It's so much fun when you know the law and they don't!

Conspiracy is latent in all of man even the US Government.. been going on for years.. so stop bein illogical and saying conspiracy is impossible.. conspiracy is the root cause of all wars.. allthough Alex went a little far on the spaceshuttle thing i must admit. But the New World Order is real.. it has been quotes by multiple politicians.. and Gary Hart even talked about it on C-Span the day after Sept.11th. He said this disaster would help bring in a "New World Order" at the council on foreign relations meeting

What's a good online dealer for new and used Uniden scanners. I am getting back into scanning and would like to get a newer version of the bearcat 890XLT.
any info would be appreciated

Hmmm-maybe you should round up all the Americans and put them into camps the way we did with some of those with Japanese ancestry in WWII. You seem to automatically assume every American in Britain is for war or responsible for it. I suppose our protesters should feel the same about all British citizens in our country if the UK gives support and act accordingly towards them?

You brought up the Nazi word. Maybe come February 15 you can make all the Americans wear little red, white, and blue stars so you can single them out for more of your special treatment if war comes and they are still there.

Fuck off. Cordless phones frequencies can be grabbed by doing 1 search on a newsgroup and you'll get about 20k hits back. After announcing to everybody you're the asshole of this newsgroup, now you can go practice fucking yourself in the ass.

GO TO WWW.YAHOOO.COM

Type in "cordless phone frequencies" My god how fucking hard is that. Are you all the type who call up directory assistance on your phone to get the phone number to 911. Try and think a little first for yourself instead of having someone hand hold you like a baby. Cordless phone frequencies are posted everywhere unlike some of the more specific and difficult questions posed in here.

No, that must not have been Emilio, as it never showed on my NG downloads. I only got the replies to the original post. I've got a LOT of the NG twits on my kill list, but I always welcome Emilio's stories. As you say they are generally very entertaining, lots of fun to see all the people who take them seriously. Haven't heard from Emilio in a long time, possibly his medication has been increased!

You know, I hate 'spin'. Do you know what 'Spin' is? Let me explain, because your probably too dumb to work it out. Spin is when you take a peice of news or an opinion (or similar) and turn it around to make it suit you, no matter what it was originally stating. Politicians love to spin bad news into good(and the papers love to 'spin' the politicians 'spin' and then pretend to hate spin). You probably hate all politicians (except those in thae far right or the far left, I can't work which from your confused ramblings). Anyway, the reason I took to describe that is because you've either been reading Spin in one of your Nazi newsletters, you've tried to spin something yourself, or you're just plain stupid.

So, has there ever been a poll which says "Hey, do you like the Yanks?" or a headline "Get those damn Yanks out of Britain!"? Nope. What the polls said was "Do you agree with war?", "Do you agree with President Bush's stance on Iraq/terrorism?", and the headlines along the lines of "Stop the War". Why? Because the rest of this country is wouldn't even consider throwing piss and shit (hell, you're right though, that sure isn't violent - like hell), treating all Americans in the disgusting ways you describe, or attempting to incite the violence you have. Any 'publications' or polls which do ask such xenophobic as you imply are probably the same ones which still refer to black people as 'niggers', asians as 'packies', and thought the KKK did a great job.

Please, read the above fully and slowly. I am not trying to confuse you, but I do think you need to read the above properly before reacting. If you want to stop the war, I guess it's because you want peace and love throughout the world right? Well, don't start threatening violence at people then. Hell, if we all began acting like you wanted us to, we'll be dead in weeks.

AK

Hello Anthony. Try Communications Electronics Inc. in Ann Arbor Michigan. I believe their web site is: www.cei.com . They have pretty good deals on new Uniden stuff. Not sure if they dabble in used stuff however.

Chris

apologies

my views on the war are the same s mentioned in previous mails,but the threats indicated were to flush some one out,who i was hoping would contact me on seeing such mails,this person has not phoned or mailed me and probably knows i was trying to trick him.

but i would not attack any Americans,i believe in direct action yes,but not on just anyone who happens to be Amercian or indeed support the war,i have a mix of friends some against and some see no other option

There are some scanner enthiusiasts in the states who i keep in contact with regularly and wish or wished no malice on them,for me flushing this person out is quite important as this person has caused some grief to some UK scanner enthusiasts.

so yes against the war and will join the demo but thats it

sorry to have wasted so much of your time.

regards

no point in snivelling out of whats said

the opinions on the war still stand

i am a member of loads of groups and this is the only one i have posted such mails,although you are welcome to carry on my own promaofftopicgroup@yahoogoups

we have had good arguments on there from left[mainly me] and right [most of the others],but remain friendly but heated arguments sometimes,i guess you prob wont.

the opinions on direct peaceful action still stand as far as demonstations but not on attacking americans just for the sake of it.

the powers that be no i am no problem,thats why the BBC story was so off the mark,our Special Branch have no problems with my scanning or political activities.

my opinion of both the UK and US as countries still stand,but wish no harm on american civilians,as for military then they joined up so,they cant complain when the body bags start coming in.

1903. Antenna for DJ-X3

Newsgroup: rec.radio.scanner
Date: 2003-02-04 16:00:29 UTC
From: radio <waver03@yahoo.com>
Message-ID: <b1onjfmsu1@mawar.singnet.com.sg>

Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hi,

The antenna that came with my dj-x3 scanner doesnt seem to be efficient enough for me. I wish to purchase an indoor or portable antenna for it.

However, I am not too sure on what and which antenna is good.

I've search the web and it seems to me that the discone antenna pulls in the best signals.

I really require detailed advise.

Thanks alot.

welp, this could be a newbie private investigator who hasn't figured
out how to go to Japan/Phillipines/Hong Kong to buy unblocked
radios...

I found this bizarre rolling antenna farm parked on the street not far
from my apt one day, three guys in a white van that looked to be
packed with radio gear. I tried to be polite (they looked too scruffy
for cops, but ya never know ;) and ask if they were hams or such but
they were being pricks

I called the cops from my place, watched out the window as they
produced some kinda ID. Once they did drive off I asked the cop what
was going on and she explained the van was a celphone monitoring
operation for a private investigations firm...

The phrase "for law enforcement use only" (as in use of unblocked
multimode scanners) seems to be interpreted rather broadly these days

=US=

In planning to hook a scanning radio to a computer, I'm doing my best with circuit diagram http://stevenet.freehosting.net/icom/ , showing two types of grounds, those with 'feet' and those marked 'gnd'. Are these to be all soldered together?

The 5 volts is supposed to come from one of the RS232 pins? Why does s/he show it going off into space?

I was told on rec.radio.scanner to buy the ready made cable or look at a list of links which i already looked at, but i ask again my question above still.

As this is just to clone the R2 radio memory into a computer file, one needs not the full blown IC-V interface.

Talk about killing the messenger. The ARRL let you and everyone else know what is being filed with the FCC. Their announcment in no way indicated support. I would think you would be thanking the ARRL for letting you know. I am sure that you have filed your comments with the FCC concerning this issue. I suggest you send a thank you note and contribution to the ARRL for keeping you informed. N4VOX

Negative!! The reference points drawn as a downward pointing arrow is earth reference ground. The ones draw as a horiz line with a series of "feathers" pointing down are circuit reference. They also are referred to as being Hot and Cold ground. Hot refering to the power source from the mains. Cold referring to isolated ground reference points. The Hot and Cold grounds must remain seperate.

Doubt it. Even newbie PI's know you can't use a scanner to do that.

Any real PI firm with a need to tap cellular has the $$$ to get the proper test equipment. It would take a small van with a forest of antennae to cover all the possible protocols in use. I'm sure they had at least one scanner, so they'd be forewarned of any pending visits from John Law.

I've even helped PI firms set up laptops with discriminator tapped BC895's to do MDT decode, back in the heyday of MDT Monitor and other great proggies...

Andy,
No, most Russians are better educated than 'Bill',
and write a more coherent sentence. 'Bill' is a typical
American excitable fool who can't seem to string a few
words together intelligently. Just another example of
our great school system who seems to be trying for a
political career. In other words, just a manipulative
politician 'wannabe'. Or even in more simple terms,
he's stupid...
'Doc

Sorry for all the questions but after looking around your site the
weather sats intreged me. I'm curious, would the same antenna we were
talking about work well for "hearing" these sats? One passed overhead
tonite and I could make out the sounds over some static.

Thanks,
Bryan

Message-ID: <ZmZ%9.32875$zF6.2300674@bgtnsc04-news.ops.worldnet.att.net>
Source record: 37209

Why are all electronics sold "as is" but not DOA? If the scanner has problems then are you out of luck? I think the sellers on this newsgroup will "stand behind" their scanners and are more honest than Ebay sellers.....That's why I prefer to buy and sell here.

Frank

1928. ICOM IC-R3 Freq question

Newsgroup: rec.radio.scanner

Hello!

I have an ICOM IC-R3 scanner. And I understand that I can see uplinks from news vans to the news stations. I have no idea where to look for these things at (freq). Does anyone have any good suggestions on where to look for these uplinks at?

Or does anyone else have cool things they watch on this scanner?

Thanks,

Jeff

I think eBay encourages you to say "as is", if in fact you are not offering a warranty of any kind. Plus there are so many idiots trying to hack scanners into picking up cellular phones, destroying them in the process, then wanting their money back. I normally offer a 30-day warranty on electronic items I auction on eBay.

I still prefer selling items here, and usually try that first. If that fails, there is a much larger audience on eBay. I think that is the attraction.

I have been wanting to get back into scanning after a three year absence. So
I started looking to get a used scanner,BC890XLT, that's what I had and like
an idiot sold it cheap..
I then began to think, I HAVE A BC2500XLT,I lent it to a friend who never
returned it.
Let's see what he says about it.
Now I have a question for you guys. what's a decent desktop scanner to get.
I like airplane traffic, local police guess that's about it.
thanks\
Anthony

No, you really need a turn style type antenna for satellite work, I do
not have any bookmarks for them but if you do a search under turnstile
or wefax antenna I am sure a number of them will be found.

---------- Original Message ----------

Sorry for all the questions but after looking around your site the
weather sats intreged me. I'm curious, would the same antenna we were
talking about work well for "hearing" these sats? One passed overhead
tonite and I could make out the sounds over some static.

Thanks,
Bryan

You should be cautious about anyone that says something is being sold
"As-Is". "As-Is" is usually followed by a very short, incomplete
description with statements like "I have no way to test this." or
"This is from an estate sale. It was supposedly working when taken out
of service." The only time anyone should use that term is if there's
no way to test the item.

When I sell electronics, I always describe it to the best of my
ability. I rarely have anything that I can't test, so I state that
it's not DOA and is guarenteed to be working when it arrives (if I'm
selling it in working order). I also require shipping insurance on all
electronics in case the item's mishandled in shipping.

I've bought most of the equipment I currently own off of eBay. Most if it was sold "as-is" but not DOA. I have yet to have a problem with a piece of gear I purchase from an eBay seller which totals about $2500 in the last 2 years.

However I've made about 5 purchases directly from a people on the newsgroups. 3 out of 5 were very disappointing transactions. At least on eBay you can read their feedback prior to bidding and if paid via PayPal you have some recourse at getting your money back if the item is never shipped.

When purchasing an item from just a Joe on the newsgroups you have no meaningful recourse, it not like I can leave neg. feedback. And if I paid via money order I really can't dispute the charges....

Based on experience I would purchase from an eBay seller before puchasing from someone on the newsgroups.....

You first need to know if the police and fire in your area are conventional,
trunked or digital. The answer to that will determine what scanner you get.

I buy and sell on Ebay all the time, but I don't believe in that whole
"As-Is" crap. I've very skeptical about anyone selling something
"As-Is". To me that means "It might not work, and if it doesn't, tough
luck". I'd rather see someone put a good description, list any
problems, and say that it's guarenteed to be in the described
condition upon arrival. I'll never list anything "As-Is" unless I
really don't know the condition and have no way to find out.

While I do not know where to look I do know that with the R3 you would literally have to be inside the news van to pick up a signal. About the only good video you can catch with the R3 is broadcast TV.

Ok, first thank you for bringing it to my attention, it sounds like it is a link to a site and not something on my site. I sent you a e-mail off
list and would appreciate it if you could tell me where that link is, I am not finding one called 'airport freq.'.

I will discontinue the link if there are a bunch of pop ups there. I do provide links to other good pages outside my system and sometimes they change or go away so I am always happy to hear if someone has a problem so I can correct it.

Again, this pop up is not coming from my site but sounds like from a link I may be providing.

Thank you again

---------- Original Message -----------

Go to your airport freq. area. The first thing that happened was a pop up window about "I'm the 100,000 (or what ever) person." It was rigged so that even if you clicked the "close window" it opened it's bull s**t. I could not even see the first 2 or 3 listings because of the window. It stayed for about two minutes before closing on it's own, after counting probably 5 or 6 hits while I tried to figure a way to get rid of it..

By the time I finished in your site, I had to close around 6 or 7 windows.

If it's not your site, then it's your ISP. Check your site from someone else's PC or from your browser.

Just the Fact's.

Jack

Thank you for the help, I really do appreciate it. I've been doing some research into these antennas as well. One thing that I'm also wondering is, assuming I build an antenna for getting these sat images, how well would the antenna work for general scanning (such as the things I mentioned in my original post, noaa radio, airport freq's etc)?

Thanks
Bryan

Not very well, the angle of radiation for the antenna I think is
designed for above the horizon.

---------- Original Message -----------

Thank you for the help, I really do appreciate it. I've been doing some
research into these antennas as well. One thing that I'm also wondering
is, assuming I build an antenna for getting these sat images, how well
would the antenna work for general scanning (such as the things I
mentioned in my original post, noaa radio, airport freq's etc)?

Thanks
Bryan

I don't even have the software on my hardrive anymore. It worked quite well and pretty much bug proof, only complaint would be having to have a separate database program. I should dust off the interface and put it to work again.

You might want to look for APF Filemaker program, it looks for and makes a file for frequencies out files that have frequencies throughout it. Its a DOS program like the HB232 program.

Ted

This is the kind of scanner that a basic electronics store (ie: Best Buy, Circuit City) would sell. You might also want to look for it in the electronics or automotive department of Target or Wal-Mart.

Some other cool things you can look at on an R3 are:

wireless cameras (X-Cams)
racing car cameras
video 'rabbits'

It is still for sale...

The display seems to be scratch free, and I have added a thin plastic protective coating
(super clear tape!) to it to protect it from any scrapes. You cannot tell the tape is there
when looking at the display, as it is super clear!

Body had a few "dings" on hit, but overall it is in super condition! You will not be disappointed
or bored this with radio!

Bubbles on display are the protective film coating I added to the display.

RADIO HAS FULL 220-400 Mhz Military Air band coverage! Try finding that on a "newer"
scanner on ebay....you wont!

Basic specs
Channels 400
Banks 20
Coverage 25-550 760-1300 MHz(minus cellular)
Scan 100 channels/second
Search 100/300 steps/second
Steps 5, 12.5, 25 & 50kHz (Selectable in ANY freq range, unlike other "scanners"!)
Modes AM, FM & WFM

Compare/Contrast To Radio Shack PRO-26
Both radios have
25 - 1300MHz coverage
Receive AM, FM and WFM
Search 100/300 step/sec (not 20-30 a sec like some "wideband scanners" Ie Aor, Alinco, Yeasu, Yupiteru, Icom!)
Auto-store (the radio will program itsself!)
Auto-sort (sort the freq in lowest to highest range thus making scanning MUCH faster!)
Scan/Search Delay
Search pause with stepping
Attenuator (can be selected on INDIVIDUAL channels unlike others where it is either on or off for ALL channels!)
Channel lockout
Data skip
Weather scan
Keypad lock

Keypad beep disable
Empty-channel auto-lockout
Allow receive mode change (am/nfm/wfm)
Allow step size change (you pick the step on ANY freq in ANY mode!)
50 search-skip frequencies
Backlit display
Plastic belt-clips
Low battery warning
Triple conversion (removes 99% of interference!)

The only radio close to this one is the pro-26, and it is pale in
comparison!
I will let the specs below speak for themselves!

BC3000XLT
Scan 100 chan/sec
400 channels
20 banks
10 priority channels
Ni-cad battery power
Battery saver
7-day memory backup
External speaker jack
Stereo earphone jack
Supplied with AC adapter
Supplied with monaural earphone
Supplied with NiCd battery

PRO-26
Excludes 512-517MHz & cellular coverage
Scan 50 chan/sec
200 channels
10 banks
1 priority channel
AA battery(alkaline or NiCd) power
Direct search
10 monitor memories
3-day memory backup
Search-skip review/edit
Visible search limits
Monaural earphone jack

A very able performer, the BC3000XLT has been well received by the
monitoring community as a whole. With 400 channels, wide coverage, three
adjustable receive modes and selectable step sizes, speedy scan/search,
auto-store, search lockout and good sensitivity makes it easy to see why.
It's crisp and loud audio is bound to please as well as the 400
channels with auto-store to help fill them up. The display has good contrast
and acceptable size but it is the backlight that is especially pleasing.

Three day auction! Bid now or use buy it now while this great radio
is available! It is sure to go FAST!

Still, saying "As-Is" should be reserved for when you honestly can't
tell the bidders what the condition is due to inablility to test the
item. Any auction that has a less than complete description of any
problems, or in the absence of problems doesn't contain something to
the effect of "This item is working 100% with no problems." should be
carefully looked at. Obviously, if you're not going to warentee an
item you sell, the auction should state that, but generally stating
the current condition (if known) and the fact that the item will be
working when it arrives (barring anything that happens to it in
shipping) should be the standard.

Why are all electronics sold "as is" but not DOA? If the scanner has problems then are you out of luck? I think the sellers on this newsgroup will "stand behind" their scanners and are more honest than Ebay sellers.....That's why I prefer to buy and sell here.

Yeah..well that's all fine and well until you sell one to "Mr. Electronica" who thinks he can do cell mods with a kitchen knife and then screws the radio all up. And the FIRST thing these types do is to say YOU sold THEM a defective scanner.It's because of a few a**holes like this that folks sell them "as-is". Plus, a lot of morons on Ebay think they get a LIFETIME WARRANTY with a used item. Apparently you must be NEW to Ebay???

Your point is? This is a group to discuss scanner related topics. This
particular thread is about a scanner related topic. End of story.

Complaint...this user insists on REPEATEDLY using profanity and posting
off topic in the USENET usegroup rec.radio.scanner

This is a violation of your TOS

Inappropriate Content - Distribution of content which is inappropriate for
its intended recipient. Examples include: Distributing inappropriate content
to minors and posting content that Comcast deems offensive on personal Web
space.

Illegal Activities - Any activity which violates local, state, federal or
international law. Examples include: Posting or disseminating illegal
material (such as child pornography or obscene material) or using the
Comcast Network to facilitate pyramid or other illegal solicitation schemes.

Comcast reserves the right, but not the obligation, to refuse to post or to
remove or block any information or materials, in whole or in part, that it,
in its sole discretion, deems to be offensive, indecent, or otherwise
inappropriate, regardless of whether such material or its dissemination is
unlawful.

I would appreciate your help in controlling this foul mouthed individual.

>Doubt it. Even newbie PI's know you can't use a scanner to do that.

Can't use a scanner to do what, listen to cel conversations? Not both sides, sure, but with a downconverter anything becomes within range, tho digital is just noise ;)

I used binoculars and read their lips when they were a half-block or so away - seems like they're just peckerwatchers :)

Once Upon A Time is was illegal to scramble communications on publically-accessible radio freqs - now even glorified peeping toms like these guys can use scrambled FRS/GMRS and say what they want

>I've even helped PI firms set up laptops with discriminator tapped BC895's
>to do MDT decode, back in the heyday of MDT Monitor and other great
>proggies...
>

Yeah, it was in here wasn't it, a couple years ago, when someone posted there was a auction on a base-station MDT modem thingy

got bid up to 1000 bux as i recall :) Too rich for my blood...

That ESN thing, how d'ya legally possess such a critter in your private home, let alone ship to one? Is it another case of being able to own it as long as it can't be proved you're using it?

I bought a alarm programmer once, complete with manuals and all, in a garage sale, no way to test it, so I hacked it for the chips and display. It struck me that even tho the thing could be used to field-reprogram commercial burgular alarms, it wouldn't be a crime just to own it...

Carying around alarm reprogrammers or ESNs in your trunk might be a bad idea tho, eh?

Would anyone know of the frequencies that are being used in the recovery of Shuttle debri. HF,VHF,or UHF frequencies will be helpful. I live about 50 miles south of Nacogdoches and thought maybe I may be able to receive some type of transmission form the search teams.Thanks ahead of time for any help to be given.

> You are a rude JERK! Here is the info he requested...

The person I was replying to, "B", didn't request anything peckerneck. The info being requested was by civmatt@hotmail and it was about 900MHz cordless phones, not 43-49MHz phones. You're such a friggin' genius that you posted a list of frequencies without even checking the rest of the thread. Don't you look like a moron now? YES!

And you're report to my ISP will most likely get you laughed at even more. I'm not in violation of anything.

Look at what you said:

"Inappropriate Content - Distribution of content which is inappropriate for its intended recipient. Examples include: Distributing inappropriate content to minors and posting content that Comcast deems offensive on personal Web space."

Usenet is not my personal Web space. I'm not in violation there.

"Illegal Activities - Any activity which violates local, state, federal or international law. Examples include: Posting or disseminating illegal material (such as child pornography or obscene material) or using the Comcast Network to facilitate pyramid or other illegal solicitation schemes."

Last time I check speaking my mind wasn't a violation of local, state, federal, international or Comcasts laws. You lose again just like a big loser does.

Now follow B's ignorant ass right out of here and leave me the fuck alone.

Complaint...this user insists on REPEATEDLY being a jackass and posting stupid remarks without reading the rest of the thread in the USENET usegroup rec.radio.scanner

This is a violation of your TOS

Inappropriate Content - Distribution of content which is so idiotic that no one can believe that someone would be so stupid as to post it.

Examples include: Opening your mouth before knowing all the facts.

Illegal Activities - Any activity which violates local, state, federal or international law.

Examples include: Trying to silent someone's free speech by sending unwarranted complaints to their ISP.

RoadRunner reserves the right, to do nothing. The subscriber in violation is just a moron and there's nothing himself or we can do about it. Just add the shithead to your kill filter.

I would appreciate your help in controlling this bitch balling bastard cunt ass sucking dickweed.

Hi,

Thanks for your input! I was just wondering if you can tell me where to look. like near what frequinces can I find everything you talke about. And what are 'video Rabbits'?

Again thanks for your info..

Jeff

1982. Live Daytona 500 Driver/Crew Scanner Comms Update!

Newsgroup: rec.radio.scanner
Date: 2003-02-05 23:19:02 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3E419BE6.50008@licensed4fun.com>
Source record: 37165
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,alt.radio.scanner

February 16 is the Daytona 500 NASCAR Race. As many of you know last year I had setup a few scanners to broadcast the live Driver/Crew and NASCAR Officials communications during the Race. Over the last two years Iï¿½ve done 2 Pepsi 400ï¿½s and last years Daytona 500 with great success.

Once again I plan on doing the same thing, this year with some improvements. With the addition of several scanners and an audio mixer board Iï¿½ll be able switch between the most interesting communications much faster than before.

However I can use your HELP! Iï¿½m looking for the most current list of NASCAR Crew Scanner Frequencies. I currently have last years list but would like to find something more up to date. Please post an URL if you know of one.

For the next few days Iï¿½ll be broadcasting live Airport, Military comms and/or Daytona Beach Police comms. This will give you a chance to view my website and make sure youï¿½ll be able to receive the live comms before the race starts. To start a live broadcast simply go to http://www.MilAirComms.com, look for the heading ï¿½LIVE AUDIO! Daytona Beach, FLï¿½ and click on the ï¿½Start Audioï¿½ link. During last years races we had nearly 200 simultanious listeners and the system performed well.

As the race date gets closer Iï¿½ll have more updates.

Thanks
George

This was/is one of the best scanners made.

Combine the scanner with the late Bill Cheeks three modification books and his HB/CE232 computer interface and this is an unbeatable scanner.

Sold by Radio Shack but made by GRE.

I am proud to say I own 3 of them, all in various versions due to my own modifications (following the books directions). I also own Pro-37's, Pro-43's and a Pro-95 and a couple of bearcats too!

If anyone else is looking to sell a 2004/5/6, please let me know, I would be interested and do monitor Ebay.

I'll probably be doing some of the other races if nothing else to make
sure the equipment is working and I have good frequencies. I'll have
more on this next week during SpeedWeek....

See what happens when you connect it to pins 7 and a. If that doesn't work, power it from 4AA batteries, or 5V borrowed from the game port on your computer.

Message-ID: <3e41a829_2@binarykiller.newsgroups.com>
Source record: 37175

Ok, here it is. This is a 100 point question so think carefully and clearly.
RadioShack Pro-91, open the battery door. There is little switch at the top
of the battery box that sets alkaline/rechargable battery type. I think
(that's think) the switch set to the left is alkaline (recharger off). Which
setting is for alkaline (non rechargable)?
Tnx,
Dusty

Try the folks at <http://www.groveenterprises.com/>
and before you make ANY purchase check out the frequencies in us around where you live, to
see if the folks have gone to trunking and are digital! There's a lot of information is at

<http:www.strongsignals.net>
Click on FAVORITES over to the left and scroll down to message boards
At the bottom of the FREQUENCY and TRUNKING messages boards are links to frequency info
that will tell you if trunking is in use, The TRUNKING board also has reviews of trunking scanners
Look at Manufactures and Dealers for other good buys!.
Jim

Anyone using the Icom PCR-1000 wiht the new Bonito software? I'd be interested in your opinions.

Thanks,
Bill Crocker

Sounds like John Aschcroft is gettin' bored again. How did this
jackmeat get so much power, he wasn't elcted to office. Come to think
of it, neither was his boss.............What the F**K is Ashcroft doing,
just 'cause he got beat in the last election he ran in by a dead guy
doesn't mean he has the right to totally trash OUR Constitution and OUR
rights. "OUR" includes you......... Thank God we only have 2 more
years of this crap. Hopefully we'll survive it but I have my doubts.

I initially thought I had this SOLD, but the fellow backed out.

I will try one my time then it's off to eBay..

I am selling my MINT condition Uniden 780 XLT scanner. This scanner has never been mobile, and is in a clean, non-smoking environment. It includes the manual, and all included accessories, however the box has been lost. The scanner will be well packed for delivery via USPS Priority Mail, insured.
$225.00 SHIPPED! US buyers only.

Please E-MAIL if interested. If you reply here, I may not see it for a day or two.

eBay feedback under OFFDAN

Guess the bidders should ask the sellers to define "unblocked" for
their auctions. The key to happy bidding is asking lots of questions.

2008. ic-r3 power supply problem & question

Newsgroup: rec.radio.scanner
Date: 2003-02-06 06:31:46 UTC
From: hiker5@webtv.net
Message-ID: <6661-3E420152-72@storefull-2251.public.lawson.webtv.net>
Source record: 37191

The adapter that comes with the IC-R3 isn't enough to run even the radio portion of the reciever, although it seems to try..

I wanted an AC adapterr to run the radio and tv on it without having to charge the batteries all the time.

I didn't (and still don't) know what the amp on the power supply is that I need, so I looked it up and:

several people in the scanner newsgroups said that 6volts 800 mA worked fine for them with it. so:

I bought a 6volt 800 mA AC adapter, and followed the instructions on it. The radio says it's negative ground. So I used a 6 volt 800 mA AC adapter, negative ground. This didn't run even the radio at all. It wouldn't even turn on.

according to the ac adapter instructions, this meant that I had the tip polarized wrong since I had the right voltage and the right amperage (according to people in this newsgroup), so I switched the tip to positive polarization. It turned on, but read high voltage. so I immediately disconnected it before any damage could happen to the radio. and put back in the supplied battery pack that comes with the ic-r3. and it worked as it always did.

so I triied the ac adapter once more with negative ground. the radio wouldn't even turn on, aas though it was completely dead, just like before.

there is nothing wrong with the ac adapter. and nothing wrong with the IC-R3 reciever. (you KNOW what I mean by that. so don't go stating the obvious flaws in it like it doesn't pick up the AM broadcast band well). I mean that it works as it was designed to).

so the people who said that 6 volts 800 mA is the correct adapter for it are wrong, as it won't even turn on with that. (negative polarization).

so I'm back to using the battery pack that has to be charged. as I don't want to use AA batteries since it goes through those very quick. 6 volts is the correct voltage as that's what printed on the side of the reciever.

so the problem seems to be in the amperage.

so what type of ac adapter does it need to run both the radio and tv from a wall socket instead of from batteries?

so that I can use the tv portion when I want to from the wall socket,
and use the radio portion from the wall socket when I want to?

I should state that I'm in the U.S., just in case that affects the type
of ac adapter that I need.

2009. Re: ic-r3 power supply problem & question

by the way, the reason that I didn't get the cigarette lighter power adapter for it is because my car doesn't have a cigarette lighter plug in it at all.

I remember all of our old cars used to have cigarette lighter plugs in them.

however, our new cars don't.

I guess that's a side-effect of all the anti-smoking stuff.

2010. FS: (2) Bearcat III Scanners

Newsgroup: rec.radio.scanner
Date: 2003-02-06 07:39:39 UTC

Cross-posted to: rec.radio.scanner,rec.radio.swap

For Sale:

Two (2) Bearcat III scanners.

These 8 channel crystal-controlled scanners were a "classic" in
their day, and are still quite useful for fixed frequency monitoring.

One of these Bearcat III scanners is in excellent condition, and
comes complete with it's whip antenna and A/C power cord.
The other Bearcat III scanner is in very good condition, but it's
missing it's whip antenna (replacement available readily at any
Radio Shack), and it's A/C power cord.

Will sell both for $30.00 plus shipping (and insurance at your
option). Money orders ship immediately, checks ship when
cleared.

Thanks,

-bill

Wow, happy to hear they finally made it, even though it's some years
after WinRadio had their support for Win2000. In fact, WR had
WinNT/2000/XP support ready the day MS launched them.

But I agree, it's better late for Icom than never... ;-)

Richard

PS Is Icom's new software XRS-compatible?
Can you control their radios with RadioBasic? ;-)

Morning Wayne,
You can go after him through his ISP, maybe the USPO and also the
FBI because of the Interstate Laws if you live out of state.
Put your notes together and call the FBI then email your notes to
them. You should be able to do most of it online.

Contact your local district attorney. Also, when you send item for a trade,
ONLY send them via REGISTERED MAIL/UPS/FED EX -
aka a method they must SIGN for to get the items you sent them!

I dont believe they can, they cannot make ANYONE give $$ back.
If the person were to transfer the funds from each auction to their
bank account, then close the paypal account, there is no way
that I know of that paypal can FORCE you to pay.
Afterall, it is your word against the disappointed seller/buyers word.

Anyone ever had a problem with scammers filing a chargeback?
That is where the buyer buys something from you via a credit card, and you
send them the item, then shortly thereafter the scammer buyer files a
complaint with the credit card company (disputes the charge) and
the CC company refuses to pay for the charge. Then the seller
is out the merchandise, and the buyer gets it for free (he is a
theiving bum!) and the buyer looses both the $$ for the item and
the equipment. Anyone ever had this happen to them?

This is the ONLYthing that scares me when using paypal. Usually
for high $$ items, most sellers will ONLY accept a money order.
money order = sale is final

Your input is appreciated!

They will if they do not do their homework on radios before
they buy them. That is how the MAJORITY get
scammed on ebay. Also, sellers will advertise a radio as
"unblocked" that does NOT have the cellular range in it at all.

Message-ID: <42959f9b.0302060945.1de11c2@posting.google.com>
Source record: 37119

How good is the IC-R2? I have read reviews and it looks like its a decent scanner for what I want to do. My main concern is how well will it work at Nascar races. I want to attach two headphones to the scanner. In all the reviews I have read it does not state anything about the ouput for headphones. Does anybody have any input on how it may work with two sets of headphones being used at the same time? Will the volume be enough? Or is there a better scanner that may work better for around the price of the IC-R2 ($100-$150) Thanks.

Delivery conformation or SIGNATURE confirmation, there is a BIG
difference. Delivery confirmation means it showed up and the post
office of the receiver and was sent out to the address to be delivered, but
they do not have to physcially SIGN for the item.

Signature confirmation means they have to physically SIGN for
the item - only the receiver who is named on the package
is allowed to sign.

Boy, the world is getting more and more wicked each day!

How about the next best thing:

The EMILIO GOLDSTEIN Usenet Trolling Kit!

Using this fantastic tool, you too can be a usenet troll! Here's a sample of what you get.

--Cut here and post to your favorite newsgroups -----

Hello everyone,

I'm not trying to capitalize on the ___Insert tragic event here___, but I did want to let everyone know that I have __Insert related item here____ up for auction on Ebay. Please note that I do not sell __insert horribly tasteless thing__.

Please stop by and make a bid. I am a ___insert pathetic job title here __ and only make __insert pitiful wage here___. To make things worse my __insert relative here__ is dying of __insert terminal illness here__ and I was recently falsely arrested for __insert crime that would enrage the reader here_.

Thanks,
Emilio Goldstein

----end form ----------

Order now, and as a special bonus, you'll also receive as our gift to you, the Help Me, The Cops Confiscated My Scanner form. With it you can make such gems as this:

help plees.

i listen to scanner say cops coming to my street to bust drug dealer. i call him up and say "ha ha, you go to jail scumbag" and he runs away. then cops bang on my door and take my scanner. they say i go to jail for this and i cant get scanner back. this is wrong of government to take away my scanner. plees, what can i do, help me get my scanner back. i only make harmless joke and now they arrest me. help plees.

But wait there's more! You'll also receive as part of your order, the punctuation and grammar spoofer! With this cutting edge, state of the art software, you can type your trolls in plain understandable english and they will be translated to incoherent mispelled unpunctuated crap! Observe:

Original: I'm looking for information on a scanner that will receive cellular phones without any modification. If you know of such a scanner,

please post a reply. Thanks!

Translation: i heard there is a scanner that can get phone calls i want one
bcaeus that would be so kewl then i could spy on my naybor thanks

Don't delay! Order within the next 7 minutes and receive TWO trolling kits
for the price of one! Hurry, this offer is not available in any store.

Operators are standing by to take your order! Have your credit card ready
and call now:1-800-4EMILIO

or send 19.95 plus 13.50 shipping and handling to:

Be Emilio!
3232 Troll Bridge Way
Albuquerque NM,76005

Please allow 4 to 6 weeks delivery. Sorry, no COD's or personal checks.

Hi,

I have an EDACS control channel bit stream (output of an FM
demodulator) and I can't parse it for the sync patterns. Any ideas
what I'm doing wrong? Do I need to un-NRZI it? Invert it? What's
wrong?

Thanks!
John

Two Texans were arrested Wednesday on federal charges they stole pieces of space shuttle Columbia that had dropped onto the countryside.

Federal officials in Texas also declared an amnesty period extending until 5 p.m. Friday, during which people who have collected shuttle debris can turn it in without fear of prosecution. After that, prosecutions will resume, they said.

Merrie Hipp, 43, of Henderson, was charged with theft of government property for allegedly stealing a shuttle circuit board on Saturday.

Bradley Justin Gaudet, 23, of Nacogdoches, was charged in a separate incident with stealing a piece of thermal insulating fabric. Gaudet is a student at Stephen F. Austin State University.

Both appeared in court later Wednesday handcuffed, shackled and with chains around their waists. They pleaded innocent and were freed on their own recognizance.

Neither suspect would comment, but their lawyers said both were unnerved by the charges, which carry a maximum of 10 years in prison and a fine of $250,000.

When they mean by "two way" radio coms does that also include things like FRS and CB Radios? That's just ridicious. Maybe soon they will require people registering television sets.

Before you get your panties in a wad, it is not the government trying to
force registration.

It is a proposal for rule making submitted to FCC by a ham radio operator.

The chances of it being adopted are little and none.

Are your local public service agencies using analog? If so, is the
trunking system in use one that the RS scanner of your dreams capable
of hearing? Some agencies use Motorola; some use Ericsson, etc.

Enquiring minds want to know where you are.

On second thought, aren't some of those now discontinued? You might be
able to get a new one at RS for less than you would pay for one at
Ebay. Stranger things have happened. A lot of the radios being offered
at Ebay were bought at RS earlier that day for a lower price.

Check http://www.strongsignals.net/access/reviews/ for reviews.

All the local public service are analog, state police are trunked but they bore me more like DMV police.
anyway I hear what you are saying about the eBay vs. the store thanks for that.
The different type of trunked systems you mentioned, aren't there scanners that receive both?

Funny how that works. I've owned three PCR-1000's over the years, and just ordered a new one. They can't be all bad...read below:

(Bellevue, WA • March 2002) - ICOM America, Inc. acknowledges the use of its IC-PCR1000 wide band, computer-controlled receiver by the Department of Defense. The lightweight yet highly sensitive receiver will be used aboard a military unmanned aerial vehicle (UAV).
ICOM America specially modified a select number of IC-PCR1000s for the job. The contractor was impressed with the "agile response" by ICOM America to its request for the modified receivers.

I hide behind an identity to protect myself from being spammed. I got sick and tired of being spamming me so whenever they "farm" my email address they can get a nice subscription to pornmail themselves.

At least I had the brains to think of that. Besides, if someone needs to reply or get a hold of me they can do so through this forum. I do have sympathy for someone who lost their money. I have had plenty of things stolen in my life too, but sometimes it takes a little common sense. Would you park your brand new Lexus in the downtown district with the doors unlocked and keys in the ignition? I didn't think so. On a smaller scale, would you send someone a $300 piece of equipment in the mail without any knowledge of who, what, or thing they are? I didn't think so.

It doesn't mean I don't have sympathy, but sometimes it takes a little common sense. FBI has bigger and better things to worry about than people being ripped off from something that could have been prevented with a little common sense. The government is not here to police our lives and actions, if they were, you can gladly move to China.

2072. 915 MHz???

Newsgroup: rec.radio.scanner
Date: 2003-02-07 00:39:21 UTC
From: donfanucci@aol.com
Message-ID: <20030206193921.02926.00000375@mb-mn.aol.com>
Source record: 37055

Anyone ever hear of a cordless phone being found on the 915 MHz frequency? I was using my Radio Shack Pro 93 handheld scanner today, and it stopped on 915.44375 (to be specific). I quickly recognized the voice on my scanner... it was my neighbor directly across the street. I could make out that it was definitely her voice, but I could not really decipher any of the conversation, despite even walking into my front yard with the scanner in my hand. The voices were jumbled with a lot of interference, but it was one of those things where I heard enough to know who it was. I checked to see if the conversation would be audible on the "standard" cordless frequencies, i.e. 902-908, 925-928... but I had no luck there.
So my questions would be:

1) What brand of cordless phone operates in the 915 MHz range?

2) What is the best antenna to use for my scanner in order to pick up this 915 MHz range a bit better. I have the rubber duck, and the metal telescopic one from Radio Shack. Neither of them worked too well for this particular frequency.

P.S. When I say that she is across the street, I mean *right* across the street. I was no more than 30 feet from her house, and I was still just getting not much more than a garbled (2-way, BTW) conversation.

Any help would be much appreciated.

Right like the friggin FBI is going to drop their work and check out this guy! Anyone who purchases anything by sending money to them before having the product in hand is taking a chance of losing it! No if, ands, or buts. You send the money and if you are lucky get the product. I purchase on Ebay and other internet sources but always realize that at any time my money could be G O N E.....

Actually ALL I'm trying to do is warn others. If I get my radio back fine, if not fine too. I knew I was taking a risk. The guy said he was blind. That carried some weight with me. No problem here, except I now don't have the money to get my new R75 :) See, I'm still smiling.

Actually PayPal a few months ago stated an Insurance type option. You pay a few bucks extra and if you don't like the item you received and the seller won't refund PayPal will refund you directly.

It works as I used this option once and it worked ($200.00 item).

Bullshit. I've seen that lame-ass excuse so many times I could puke.
I refuse to do business with anyone not using their real name because
they (you) obviously have something to hide. I've subscribed to this
newsgroup for a LOT of years using the exact same ID and I don't
get spammed, period. It's called a "SPAM FILTER". You might try it.

All these years I watch you phonies come and go. Meanwhile, the
rest of us use our real names.

Ok, I've been scanning for a number of years (Pro-23, Pro 51, Pro 91 and Pro 2006) I think it's time to look at new technologies. I want to get a new (or used) scanner that'll interface with my PC. What's available? I'm looking for a base station. I'd like to hold it to under $750. Anyone like to comment?
Tnx,
Dusty

Source record: 37063

Here is the deal.

I have owned both and can tell you beyond ANY doubt, get the alinco.
it has all the bells and whistles without the extra cost of the aor.
the aor is smaller and cooler looking but that is it. functionality
wise the alinco wins hands down. recording 2.5 minutes built in,
voice descrambler built in, ctss built in, frequency counter (and yes
it works) built in, 2000 channels, etc... you get the picture. I have
one for sale with radio, original box, manual, receipt, in excellent
condition, computer control cable, 2 smaller batteries (great for out
and about as the take less room but hold a good charge for 5 hours)
and the alkaline battery pack. All this for 425 plus shipping.

No, if anything they would like as many people to park
themselves in front of the Great Pacifier Tube for as long
and as often as possible. Or more accurately, go to work,
come home and be pacified, and simultaneously stimulated as
a consumer to buy things to be a useful economic widget.

While actively talking with someone, some naughty subversive
thought might be unleashed. We must not have that! Approved
drivel, entertainment, and commercial messages only, please!
;)

So licenses for anything that might make a person more
involved and active, and incentives for anything that makes
you passive, lazy, content, and manipulatable. That's why
TV is still free. :)

Or maybe not to steal evidence that is also government property.

2092. Re: Careful: Can of Worms

You can get a used Uniden 780XLT for about $250.00, new ones go for
somewhere around $350.00. Depending on where you live, you might want
one of the new Uniden digital scanners, which go for about $650.00 if
you order the optional digital card. All three are computer
programmable and controlable with very reasonable or even free
software. Radio Shack also sells several programmable scanners, but
nothing digital.

2093. Re: EDACS Encoding: NRZI?

Copied from info that was posted on a usenet group many years ago:

EDACS Control Channel Information

Modulation : It looks like GMSK (Gaussian Minimum Shift Keying) which
is basically the same thing as two level FSK keying except
that the data stream is passed through a low pass filter
before modulating the carrier. This reduces the high
frequency components allowing the control channel to fit
within a 12.5KHz channel. Accordingly, a simple
data-slicer circuit can be used to receive the control
channel information.

Baud Rate : 9600 Baud

Frame Sync : Frame synchronization is achieved by sending the following
48 bit sequence:

000101010101010101010111000100100101010101010101

or

0x155557125555 Hexadecimal

Data Frames : After transmission of the frame synchronization sequence
TWO data frames will be transmitted and then the whole
cycle repeats ad infinitum. Each data frame is 120 bits
long; this means 288 bits are transmitted in each cycle
(2x120 bits for the data frames and 48 bits for frame
sync).

Each data frame consists of 40 bits of information
transmitted three times in a row. In the second
transmission the data is inverted. This seems to serve as
some sort of primitive error correction scheme - in case
of a receive error one may assume that the one bit that
doesn't match the other two is bad.

The 40 information bits in each data frame seem to have
the following functions:

Bits Function
------- --
0 - 7 : These eight bits are the command bits
8 - 12 : Logical channel number
13 : Status bit
14 : Status bit

15 : Status bit
16 : Status bit; guess at possible use:
group call if set to zero, individual
call if set to one (radio ID then is
given by bits 17 - 27)
17 - 19 : Agency ID (3 bits) for group call
20 - 23 : Fleet ID (4 bits) for group call
24 - 27 : Subfleet ID (4 bits) for group call
28 - 39 : Error detection polynomial

The above tentative table seems to work well for the few
systems the I have monitored. The exact use of the status
bits are at present unknown to the me. The basic call
type in an EDACS system is a group call, although
individual radios IDs can also be sent for such tasks as a
phone patch.

Commands : The few commands the I have figured out are:

CMD Function
--- ------------------------------------
A0h : Data channel assignment
A1h : Data channel assignment
ECh : Phone patch channel assigment
EEh : Voice channel assignment
FCh : IDLE
FDh : ID bits give system ID; don't know if
status bits should be part of system ID

There must be a number of additional commands for such
tasks as dynamic regrouping or disabling radios.

A few words about those digital data
transmissions you might sometimes hear

It would be of interest to be able to monitor those digital data
transmissions that can be an integral part of some EDACS systems. This
program is a first step in that direction since it allows one to
determine when and on which channels these transmissions take place.
These transmissions take place at 9600 baud and can be monitored with
the same interface used for the control channel. The following
information was gathered from monitoring the data transmissions on a
single commercial SMR trunk (unknown use), some of it might be relevant
to other systems.

The first part of the transmission consists of 144 bit frames. The first
48 bits are the following frame sync sequence:

101010101010101010101010101010101000010110110011

The next 96 bits are 4 bytes encoded as follows: byte number one is sent three times in a row (all bits inverted the second time), then bytes two through four follow similarly. The same frame is repeated a number of times, presumably to allow enough time for radios to switch to the data channel and achieve bit and frame synchronization. During this period the transmitted bytes are 0xD4, 0x00, 0x1A, and 0x33; presumably indicating an idle / background state. After enough time has elapsed, the four bytes are changed to indicate that actual data follows. For all the messages I have monitored these bytes are 0xC4, 0x00, 0x18, and 0xF2; presumably indicating what type of data follows. At this point the actual data transmission starts, the frame sync sequence will not be sent until after the actual data transmission is complete. The first part of the data tranmission consists of two 40 bit blocks, each transmitted three times with all bits inverted the second time around. Next, 72 bytes are transmitted - each byte is sent twice (not three times) with all bits inverted the second time. Some additional redundancy is built since the first 27 bytes are always the same as the last 27 bytes. Since this concludes the actual data transmission the system starts transmitting the background / idle 144 bit frame again. For this system the idle frame is sent maybe a dozen times, then a frame containing data bytes 0x9A, 0xAA, 0xA2, 0xC0 is transmitted about 6 times; presumably commanding the radio to return to the control channel.

Wow, I did notice that option when I purchase a item also,
but it states that it does NOT cover certain items/situations:Additional terms.

1.. Fraud. Under no circumstances will PayPal reimburse requests in the event of fraud or misrepresentation by the buyer. In addition, fees will not be refundable in cases of fraud. (Strike 1 for those who buy from ebay scammers! You are NOT protected)

2.. Exercise of judgment. Buyers are expected to exercise due diligence and prudent judgment to avoid or reduce any damage to the covered property. No person or entity other than the buyer shall have any legal or equitable right, remedy, or claim for reimbursement under or arising out of this Guarantee.

3.. Shipment of goods to PayPal. PayPal will request that buyers bear the cost of shipment of the good(s) in question to its Guarantee processing center. Merchandise must be shipped using an online trackable shipping service. By paying a Guarantee reimbursement request, PayPal will assume ownership of the good(s).

4.. Transfer of rights. By filing a reimbursement request, the buyer transfers to PayPal the right to receive the good in the event the buyer has not yet received it from the seller. After a reimbursement request is paid, the buyer transfers to PayPal all rights and remedies against any party with respect to the merchandise. In addition to transferring these rights, the buyer must provide PayPal with any assistance necessary to secure his or her rights and remedies and must do nothing that would jeopardize securing those rights and remedies.

No rights provided under PayPal's Money Back Guarantee may be transferred without the prior written consent of PayPal, Inc.

5.. All decisions are final. All reimbursement request decisions made by PayPal are final and cannot be appealed by either the buyer or seller.

6.. Seller responsibilities for Non-Receipt of Goods reimbursement requests. If a buyer has purchased a Money Back Guarantee and submits a reimbursement request that indicates non-receipt of goods, and if the seller does not provide a tracking number or proof of refund to PayPal within 7 days after the buyer files a reimbursement request, PayPal may (1) refund the buyer out of the seller's account or (2) reimburse the buyer and then recover the funds from the seller. If the seller does not have sufficient funds in his or her PayPal balance in the currency of the original transaction, PayPal may limit the seller's access to his or her account until the seller authorizes PayPal to use funds from their balance, bank

account, and/or credit card to recoup the amount paid to the buyer. If the reimbursement request is complete and accurate, PayPal is still required to reimburse the buyer for the amount of the transaction minus the Guarantee fee, even if the seller does not have sufficient funds in their balance.

Now, I see why MANY sellers will only accept paypal and will ONLY ship to a confirmed US paypal address! see https://www.paypal.com/cgi-bin/webscr?cmd=_help&eloc=454&unique_id=02127&source_page=_update-policy

2100. Bearcat Electra Company Employees - Compuscan CP2100 scanner

Newsgroup: rec.radio.scanner
Date: 2003-02-07 12:24:07 UTC
From: CH <hoddere@nf.sympatico.ca>
Message-ID: <3E43A52F.30B0@nf.sympatico.ca>
Source record: 37084

ATTENTION Bearcat Electra Company Employees/technicians
and Compuscan (ex-compuscan) users.

I'm trying to do some research on the Bearcat Electra Compuscan
2100 scanner that bearcat had around 1984 and connected with the
Commodore 64 computer.

I'm trying to find information like anyone that worked at The
Bearcat Electra Company of Cumberland, Indiana. Also any
technical info (design plans, service manuals, schematics,
etc).

I would also like to know information on how the project
got started for Bearcat Electra to want to design a computer
only scanner and why it was Discontinued shortly after it
was marketed?

If you have any information beyond the basics like the
frequency coverage, features or a short discription I
already have that but I'm looking for anything related
including how many were made or any problems they may
have had.

Ultimately, I would like to put up a website devoted to
this scanner and have information and resources for
people that are just interested in what type of radio
this is and more detailed info for CP2100 owners.

Printed materal or reviews on this radio is a plus no
matter what it is. I know of several articles on this radio
but I don't have any yet?

1) January 1983 issue of Monitoring Times
2) Review in January 1984 Computers & Electronics magazine.
3) Review in PopComm Aug 1984, Page 23

I would be interested in any of the above.
I'm sure people will find more reviews/articles on the Compuscan.

It would be interesting for people who own them to email what
computer version software they have like "version 1.0 of the
Commodore 64 software".

Last of all, if you know someone not on the web that knows alot about
about this model, it would be nice to know contact information.

I've got a Yupiteru MVT-7100 I'm thinking of selling. Dragging my feet on it because *full* frequency coverage makes it a an auction listing that eBay often won't allow.

Let me know if interested.

It's not that the signals are mirrored, but you may sometimes here signals
on non-primary freqs because of signal overloads, images, offsets, etc.

BTW, monitoring cell freqs became illegal soon after politicians realized
their corrupt calls were subject to eavesdropping...

Anyone have comments on this great radio? I presently own a Bearcat 300xlt,
a Pro-93,
and a Pro-2039. I want a STEALTH radio that I can use on military
installations without
drawing too much unwarranted/unneeded attention to myself.

If you own one if these I would be DELIGHTED to hear from you.
Also, wondering how long the batteries last. I have been
experimenting with NIMH batteries in my Pro-93,and have found that
I get 12-24 hrs use from 4 1800 MAH (Ravovac - Ever ready)
that are quick charged in 1 hour on the rayovac NIMH charger.

I am VERY dissappointed in the Bearcat 3000xlt, as it seems to EAT
batteries, only giving me 5-12 hours of use when charged (these are NEW
BATTERIES!) for 14-24 hours.

Thanks for your input and God bless!

Message-ID: <CET0a.4757$Pg6.1110137@news20.bellglobal.com>
Source record: 37096

I just received my Opto Scout frequency counter and have tried to get it to look onto some frequencies, this is what is happening, is it working right. I put the Scout right next to my cordless phone and turned the phone on, it's a 900 mhz phone and the scout does not lock onto the frequency and show it, also I did the same test with my Cell Phone and again I can't get the scout to register the frequency. Also I went to the drive thru windows at The Doughnut Dinner, Wendy's, and Mc Donald's and the scout did not find any of these frequencies. Is there something wrong with this scout or is this typical for the Scout to work this poorly. Also I tried several different antennas and no such lock. I tried hooking my outside antenna to the Scout and it only locks onto frequencies in the 95-mhz band ???. The only other thing I can think of the Scouts batteries were not fully charged.
Steve

wireless cams are in the 900 and up range, also 2.4ghz, have fun I found
it was not very sensitive in the 2.4 Ghz range. do a search on wireless
cams and you may come up with some exact freqs.

The pocket is a good reference if you are on the road. However, the
big book seems to have been a victim of the internet. There are
numerous sources for MA, NH, RI, and most other New England states on
the web. The same probably goes for the rest of the country. In fact,
before I go on a trip, I look at on the web and almost always find
frequency information.

Good for you Jon ... me on the other hand replied back
to an adult spammer on one of the rec.radio's after he/she/it
put in a link for a bestiality site. I replied that he/she/it was
the sickest fuck in the world and to keep it out of the newsgroups.

my mail box was filled to capacity every single day until I changed
providers. the sick bastard sent a 10 chapter book on the correct
way "to do" an animal. my wife about died when she opened the mail.
the sick pup was located and prosecuted. i can picture this asshole
sitting in his cell planning his vengeance.

since then .... i'm stealth. it's not a lame ass excuse ... it's a
cloaking device for the digital world.

Thanks TO Everyone for all your posts and info, I just sent the Scout back to the store, they
think that there might be something wrong with it too, for several hours I had been trying to get the Scout to lock onto just one frequency and had no luck. I tried fast-food windows, I tried other radios in trucks and cars, I live in a area around my house where there are many frequency source and I could not believe that not once did the Scout lock onto one frequency. If this is the best it can do then it's not what I'm looking for.
Steve

2135. Mirrored Frenquency's?

Newsgroup: rec.radio.scanner

Howdy!

I am a scanner newbie, so please be nice :)

I believe that I have heard somewhere that frequency's are mirrored?
Basicaly, what I have heard is that cell signals that are in the 800mhz's
can also be heard in the low 20mhz's? (Not that I would personally listen to
the signals, I'm just curious)

If this is true... is there a certain make/model that is currently produced
& sold avalible that will off the shelf tune in to these cell transmissions?

I don't know if I have asked all the correct questions & what not... so
please keep in mind that everyone is a newbie at one time and if you have
any helpful direction for me, I'd certainly appreciate it!

Hmm, the name Richard Jewel comes to mind. Remember the security guard in Atlanta who discovered a bomb and warned people away, probably saving a dozen lives. The FBI destroyed the man in an attempt to convict him of placing the bomb. They got him fired from his job, destroyed his reputation in the community by releasing false stories about him, and even tried to get his family to turn on him. The real bomber is still on the loose and went on to bomb two more establishments while the FBI ignored him and went after the innocent.

And now we also have all the death row prisoners who have been released since the advent of DNA evidence. Yea, right, if you havent done anything wrong, then you have nothing to worry about. Now that is one ignorant statement!

Here may be some posts by the thief and one in particular about getting ripped off concerning a Grundig SAT 700. Perhaps more info will nail this thief. Notice how he names a business Act Electronics. Anyone know this business? They would probably know him. Notice how he calls himself Jeff and also Gabe in other posts. He has scammed under the names Jeff Graham and Gabrial Mariscal. He has offered in trade a Pro 43 and an Icom R75.

I wish I would have known that there is a repai alternative for Grundig sw radios other then Act Electronics. I sent them my Satelit-700 for repair last year. They repaired it and then supposedly by mistake, they sold it. They have offered me a Sat-500 for my Sat-700. I have refused and am still trying to get payed for my radio. It looks like I will have to go the legal route with this. Be verry carefull when sending any thing to them for repair.

is the Michigan State Police digital APCO-25 system in Flint trunked or conventional? has anyone on the group successfully monitored it? if so please give me all information about it. I heard Genesee County Central is going to join it eventually. I would also like info about that too, and who else is going to join them. also what freqs is this system on?

thanks
Tom

The 250D scanner came out around the beginning of the year. The 785D came out last week. I just received my 785D and initial impressions are very good.

It would help if you posted the geographic area where you live so someone can tell you what is digital in your area.

You can decode APCO25 digital systems with the 250/785 and add on digital card as long as they are not encrypted.

I've used nothing but my real name since checking in here years ago. I do get spammed... I've tried the Spam filters in my set up to some degree of success. My ISP has a filter in place too which knocks out about 95% of it. But lately it seems a bit more is trickling through. I'm going to do some homework to see if I can filter it a bit more. Just my two cents......and opinion. Along those lines, if you have any suggestions on how to filter "better", I would be happy to hear them. I thought there was a "law" put in place against that? Maybe I'm imagining things. But then again, this is getting to be a lawless society anyway. Homeland security? Hell, we can't even defend ourselves from our own scum.

Im like you,, I've used nothing but my "real" name and "real email"
since I started on the internet back when AOL and a 2400baud modem was
king. Now I just set up my block senders list to block anything that comes
from "hotmail.com" or any of the other anonymous remailers. And I dont do
business with "most" people who do not use their real name and email. Any
spam or heckle I receive, I only get it once, cause they go on the blocked
senders list. If people want to carry on an intelligent discussion on something,,
fine but I'm not going to bother myself with a bunch of crap. If people insist
on using phony email returns and what not,, Im just not interested.

Jeff

2153. PCRScope, anyone have it???

Mormons are told by their incorporated church head to maintain a minimum of year's supply of food for each household member in case of emergency when store shelves may be emptied and until home gardens and hunting/fishing may supply what stores no longer can. Where do you think gov't will go to seize all that food in emergency and charge head of household with "hoarding"? Colorado already has statute on books making it a crime to have more than six month's of food in house - it's called "hoarding". I expect many other states to follow unless this is challenged in the courts. Traitor FDR forced Congress in March, 1933 to make it a federal crime to have, demand or make just payment in gold coin and compelling people to surrender all privately-held coin not part of numismatic collection under penalty of ten years in federal prison for "hoarding."

A kinder and gentler - WHAT?

I own a good working FTC 1143 handi that I need to re-program. I have
not used this rig much and have moved three times in the last 8 years.
During one of ther moves I seem to have lost or mis-placed the
programming instruction sheet.
Please help if you can. I need to add Pl tones to a couple of the freq
pairs that are in there now so I can use thew local repeater on 440.
I have searched the web with no results.

Thanks for any help you can provide. E-mail or reply to thread.

That's what we wished but the problem is that the company that is talking is using one of our 821 freq's and this is a problem, been monitoring and trying to find out who they are. We are getting ready to turn those freq's on for the new radio system.

Waiting for them to send one of their units to a hospital close t me so that I can go there and check them out.

You can't spell their names, and you know nothing about their beliefs, but you know _for sure_ that we should kill them. Right.

Actually, the Islamic fundamentalists generally oppose Saddam and his secular Ba'ath Party. He prevented them from establishing an "Islamic Republic" there. The Moslem fundamentalists receiving support from Hussein is about as likely as Christian fundamentalists getting support from American Atheists, the ACLU, and _Skeptical Inquirer_ magazine.

Listen to yourself. You sound as bloodthirsty as the worst of the fundamentalists. What is your religious affiliation, if any, by the way?

With all good wishes,

MY QUESTION TO ALL,

IF YOU KNEW IN ADVANCE WHAT HITLER WAS GOING TO DO AND HAD THE POWER TO STOP IT WHAT WOULD YOU DO?

A. SIT ON THE SIDE LINES AND WAIT TO MILLIONS DIE?
B. PRETEND THERE'S NOTHING WRONG AND DENY IT?
C. SUPPORT HITLER, GIVE HIM WHAT HE WANTS. KISS HIS ASS?
D. OPPOSE HIM, CONFRONT HIM TO STOP BUT DO NOTHING ABOUT IT?
E. USE YOUR MILITARY TO STOP HIM.
F. USE YOUR EXTREMELY LARGE THERMAL NUCLEAR DEVICES AND CREATE A GLASS DESERT?
G. YOU DON'T KNOW?
H. WHAT'S THE DIIFERENCE BETWEEN HITLER AND SADDAM HUSSEIN?

THE GREAT THING IS THAT I LIVE IN A FREE COUNTRY TO SAY WHAT I FEEL WITH OUT WORRING IF SOME ONE WILL CETCH ME SAYING THINGS LIKE THIS OR EVEN WORSE GETTING SHOT IN THE HEAD LIKE LIVING IN IRAQ MAYBE? WHAT ARE YOUR THOUGHTS?

JAMES

irrelevant. you simply dont know this. hitler hated the communists.
hitler also formed a nonaggression pact with stalin. the idea that
enemies cant form alliances of convenience is simplistic.

hamas and hezbollah, both fundamentalist organizations, havent killed
arafat, a secular fanatic nationalist.

2171. Shuttle Columbia debris. Perplexing Problem.

Newsgroup: rec.radio.scanner
Date: 2003-02-08 21:27:03 UTC
From: "Felix T. Kat" <sand@the.beach>
Message-ID: <3e457626_7@galaxy.uncensored-news.com>

Here is a perplexing problem for you to mull over.

(Friday Feb 7, 7:37 PM): Overheard transmission of the Texas DPS and several counties in East Texas. "Anyone finding shuttle debris outside the established field are to be detained for questioning".

Since the Columbia break-up and the pieces are scattered into what is termed "The Debris Field", which covers several counties (Tx) and parishes (La),the "authorities" have deduced that anything outside that field is stolen.

Problem! I have a large tract of wooded land several miles outside that field. I live and work in another part of the state and have not had the chance to go to my land to check it out. My brother and I had planned to go there this weekend and walk the property.
If we go and find something do we report it and get "detained" or just say to H--L with it. Having listened to the DPS and county mounties there in the past,the "Local Yokel" police departments are not exactly the brightest crayon in the box. The Gestapo had better ethics that some of these clowns.

What would you do?

Well, I'm "not" saying this applies to all who use fake names and e-mails, but to me, if ya got enough balls to say it, you ought to have enough to sign your name to it (not hide). I've said things too which I stick by but could haunt me, but so be it. You live and learn. In my daily life and many positions I hold, I have to make a lot of tough choices and some don't sit well with many, but that's the breaks. I do what I must.....To make some of those decisions I have to have enough guts to do it and let it be known. I can't hide behind some curtain when making them. So, in my dealings on here, be it an opinion or buying and selling, I don't do it any differently. To me, honesty is a sign of maturity and responsibility. Both lack considerably in many when it comes down to the wire. I've seen people say things - recorded on tape- then lie out of it. So using a fake name and address - to me, isn't much better. Not if you intend for someone to take you at your word. Just my opinion....

There is not a defined Debris field since there is no real way of knowing exactly where the debris would go or not go. Now, if you were found in New York with a piece of debris, that would be definitely out of the field.

Go and help. Check your property and if you find something , leave it where you found it. Mark the area and call the authorities.

I have the Icom Base charger for the R3 and you can run the TV and/or radio when it is sitting in this. It's an expensive unit, but it will also charge a second battery pack at the same time. It is an awkward solution however, especially when you need to place the R3 in a particular position for reception.

Since I have a variable-voltage benchtop power supply, I set this to 6VDC and attached a long cable and a connector. It took me a few weeks to find a connector that fits, but this is the best solution I've found so far.

Hope this helps

I have a RS Pro-25 800mhz scanner. For some reason, I can no longer pick up police frequencies in the 800 range. Nothing seems to have been damaged, batteries are new, etc. Has something changed with their broadcasting that would impact my ability to pick them up, or is this likely a problem with the scanner?

The main reasons Mormons do this is they believe they should be
able to take care of themselves without begging for a handout.
They also are advised to have a years salary saved up. This is so
if they are out of work for any reason, they can survive without
having to rely on government handouts until they can find employment.

yeh they ruined that security guard guy, and i think eric rudolph did
that, and they tried for years to find him and have not as yet, and i
got a strange feeling they are doing the same thing to that white guy
who they blamed for that anthrax stuff.....the world's best police
force is just not living up to its billing.......j edgar must be
turning over in his grave.......of course he was rumored to be a cross
dresser but he did like to bust crooks and ran a tight ship........

Hi Tom. I don't have answers to all the questions you posed. All of MSP has gone to a Motorola Apco 25 digital trunked system, with 9600 baud control channels. Go to www.trunkedradio.net and look up MSP under the Michigan trunked systems.

MSP has been trying to get as many users on their systems as possible, to defray the costs. Not as many takers statewide as they would have liked, but a few join on every now and then.

Chris

I'm not aware of any non-trunked systems that are digital. The only scanners on the market today that will decode/trunktrack them are the Uniden Bearcat 250D and the 785D. Either unit will cost you close to $700.00, which is a big bullet to bite !! Neither of them are capable of tracking a 9600 baud control channel, which sucks big time (especially here in Michigan, where the state police uses that type of system). This means that you can still listen to a system of that nature, but you just won't be able to trunktrack it.

I understand that Rat Shack will be introducing their digital line of scanners sometime later this year. Rumors are that they will be able to do a 9600 baud system and will cost considerably less.... $500.00.

Chris

I have several portables and take the VR-120,
fitted with a Pryme RD9 antenna, just about everywhere.

VR-120 battery life is longer than most other models.
Based on my measurements, the VR-120 draws only 60 mA
when scanning. Compare that against the ICOM IC-R2 which
draws 109 mA. The IC-R3 draws 136 mA, the Alinco DJ-X3T
draws 85 mA, and the VR-500 draws 73 mA.

Suggest you join the Yahoo YAESUVR120 and YaesuVR-120
discussion groups at http://yahoogroups.com

I wrote free Linux/MacOSX/BSD/Windows software for all except
the Alinco.

Download it from http://parnass.com

At 8PM EST is the start of the Bud Shootout at Daytona Beach, FL. Iï¿½ll be broadcasting live audio from my scanners of Driver/Crew comms as well as that of the Officials.

Over the last two years Iï¿½ve done this with great success for the Pepsi 400 and Daytona 500. I use the Bud Shootout as my way to work the bugs out of my live audio broadcast system before the Daytona 500 next weekend. So please bear in mind the broadcast wonï¿½t be perfect but still should be interesting.

To start the live broadcast go to http://www.MilAirComms.com and click on the link ï¿½Click Here to Start Broadcastï¿½ link.

Thanks
George

well i thought thisb thread would stop,i have been of it for several days
now

it served my purpose,i have unmasked who i wanted to unmask in the UK

i wish no violence on anyone,but i do feel that this war is going to have a
knock on effect on not just terrorism but factional and individual violent
acts.

its going to be a sad/bad time ahead.

getting rid of Saddam will have no effect on stopping terrorism.

I think a comparison between Bush and Hitler is clearer to see.

Especially consolodation of power and passage of the laws restricting
civil liberties in the name of National Security.

You have seen the latest legislation in action right?

http://www.publicintegrity.org/dtaweb/report.asp?ReportID=502&L1=10&L2=10&L3=0&L4=0&L5=0

Here read the transcript from the War trials after Germany folded:

http://www.nizkor.org/hweb/imt/tgmwc/tgmwc-01/

The similarities are simply chilling.

I was waiting to turn left in an intersection when I hear a HUGE wail of sirens behind me. The other cars around me pulled off to the side of the road while I reached for my scanner to find out what was going on. I guess the light changed and I was left in the intersection when this black SUV came screaming past me - he swerved to miss me and ran into the corner light pole then skidded up into a day care center!

Just as I got out of my car, another two cop cars slammed into my dodge colt! They pushed my car off the road! I was lucky that I got out when I did because I could have been hurt.

Then there was this guy on the ground who was just screaming his head off, and there were 20 cops around him holding him down. I was trying to get their frequency but my scanner is new and I was having trouble. I tried to asked the guy who was on the ground injured to sign my police call book but he was in too much pain. Then next day the whole thing was on the news. The guy ended up dying.

I wonder if those police chases are too dangerous.

If this government was sincere about stopping terrorists we'd shut down the northern and southern borders! You can go to American Border Patrol dot com and view live footage, at times, of illegal aliens crossing the southern border. This is after they have already gotten by the official border patrol!

We had a war on poverty and have more poverty!

We had a war on drugs and have more drugs!

Now we have a war on terrorism. I'm betting we have more terrorism!

We're financing this war with every fill up at the pumps. Soon we'll be sacrificing our sons, and daughters, to the Baals -- and most won't even realize it!

It's more about - O I L - than most people want to admit.

Al

Kind of like how so many wackos claim the government uses mind control
signals on the public... but if the government did have that capability, the
one thing they'd do is make people believe they didn't have it.

Wow! Some people are REALLY out of touch....

Mind control....please see:

http://www.brojon.com/frontpage/bj040501.html

http://www.mindcontrolforums.com/resrc-hm.htm#mc

(Lots more on HAARP if you will look on www search engines!)

NEWS BRIEF: "United States Patent 5,159,703, Lowery, October 27, 1992
Silent Subliminal Presentation System, Inventors: Lowery, Oliver M. Appl.
No. 458339 Filed December 28, 1989.

"Abstract: A silent communications system in which nonaural carriers, in
the very low or very high audio frequency range or in the adjacent
ultrasonic frequency spectrum, are amplitude or frequency modulated with the
desired intelligence and propagated acoustically or vibrationally, for
inducement into the brain, typically through the use of loudspeakers,
earphones or piezoelectric transducers. The modulated carriers may be
transmitted directly in real time or may be conveniently recorded and stored
on mechanical, magnetic or optical media for delayed or repeated
transmission to the listener."

In the beginning of our Seminar 3 discussion of HAARP technology to control
the weather and to use weather as a weapon against us, we present the United
Nations' Treaty prohibiting such warfare and ask the rhetorical question:

If man cannot control the weather and use it as a weapon, why do you need an international treaty prohibiting such a weapon? Laws on the books in every state in the Union regulating cars prove the existence of cars; laws on the international books prohibiting weather warfare prove the ability to control the weather first and the ability to use weather as a weapon secondly.

Likewise, this patent to allow the inventor the exclusive right to create, and market, the technology to use certain frequencies for "inducement into the brain" prove the technology exists and is being used in one form or another for Mind Control. We suspect that the Illuminist government of ours currently is able to control the minds electromagnetically of people whom they have individually programmed, such as is the case in the school shootings, where the shooters had been previously heavily involved in the occult. However, our government is also moving full-speed ahead to the point where they can program minds enmasse prior to the time they want to actually begin controlling minds of entire populations. From the U.S. Patent website we can see that this inventor references scientific work done as far back as 1962 [Ibid.]. Therefore, we know that certain segments of science have been working steadily on this project, to control the minds of people.

Certainly, a "silent subliminal presentation system" utilizing electromagnetic radio which no one can see, hear, or smell would certainly hold the promise of controlling people's minds. Further, if none of the slaves knew that they were being manipulated, or how they were being manipulated , you have the potential of people living lives of slavery without realizing they were slaves! How delicious this prospect must be to the Illuminists who want so desperately to control the entire population of Mother Earth!

CONFIRMATION OF HAARP-TYPE TRANSMISSIONS USED IN SCHOOL SHOOTINGS

When we published NEWS1344, depicting the occult map of the six school shootings and then tied those shootings in with elevated levels of HAARP, we received some skeptical emails. People just could not, would not, or did no t want, to believe that the human mind could be so manipulated. And, I completely understand their reluctance to so believe; they did not want the terror of thinking that they could be controlled by leaders hostile to their well-being. People in the Nazi era similarly reacted to overwhelming evidence that Hitler was achieving dictatorial power and that he was deadly serious in his published threats [in Mein Kampf] to murder Jews, Christians, and others.

In the news group, NewsHawk, we have found corroborating evidence that this type of "Silent Sound" electromagnetic radio transmissions was culpable in at least one of the school shootings on this Satanic map. "This could well be going on in other regions of the U.S. as well. In fact, we at NewsHawk believe this is almost certainly the case and is very likely a factor in the unheard-of, unprecedented spate of mass murders which have been occurring throughout the U.S. in recent years. Highly respected author Alex Constantine, one the the preeminent researchers into the covert government's MANY 'mind-control' projects, specifically told NewsHawk that "Silent

Sound" transmissions were directly involved in the Jonesboro, Ark. mass school shootings in March, 1998."
[http://mercury.spaceports.com/~persewen/silent_sound.htm]

As we demonstrated in our article, above, on the Satanic School Shooting Map, highly elevated HAARP levels preceded most of the school shootings at least 3 1/2 to 13 hours prior to the beginning of the shootings. In the couple of shootings where the elevated levels were moderate, they were still elevated over the norm. Our webmaster viewed dozens of days to see what "normal" HAARP levels were, and discovered that the norm was for the signal to remain very flat horizontally. Even slight elevations of electromagnetic levels seemed to be able to produce a killing response in the person previously programmed.

We discovered, earlier this year as we were doing research into school shootings, that the shooters had one factor in common: they were participating in occult activities. In fact, most of them were so into the occult that they were feared by the rest of the student population. I have spoken with Christian author, Cisco Wheeler, who has co-authored several books on Mind Control with Fritz Springmeier, about this situation of the shooters previously being occultists. Cisco said that these shooters were not only into Satan worship themselves, but were victims of Generational Witchcraft. This term means that someone on either side of the family had been practicing witchcraft at some point in their genealogy. Maybe the culprit was Mom or Dad, or maybe the Grandparents, but each of these shooters were in Generational Witchcraft families. The Bible speaks to this issue when God says: "Thou shalt not bow down thyself to them [Satanic idols], nor serve them [witchcraft]: for I the LORD thy God am a jealous God, visiting the iniquity of the fathers upon the children unto the third and fourth generation of them that hate me. [Generational Witchcraft]" [Exodus 20:5]

CURRENT "EXPERIMENTATION" OF HAARP TYPE MIND CONTROL ON US!

In an effort to bring this whole subject a little closer to home, let us continue with this story, quoted above, on this microwave technology being used for Mind Control. This time, we move from the subject of certain individuals who might have been programmed [which is frightening enough] to entire populations being controlled [which is the stuff of horror shows]. http://mercury.spaceports.com/~persewen/silent_sound.htm

"NewsHawk® is at this very moment investigating the use of "Silent Sound" transmissions and/or related EM/RF technology applied as a mass mood/mind control operation in Northern California: apparently intended to induce (violent) psychosis in targeted subjects. Targeted subjects, in this case, would include upwards of probably two million human beings!!"

Now let us make sure we get this information straight! Northern Californians, maybe as many as 2,000,000 people, are being silently bombarded with HAARP-type radio transmissions in exactly the same frequency as all human brains normally function, in an effort to perfect the capability to control the moods and/or minds of entire subjected

populations! If this scenario sounds like Science Fiction, or like Orwell's Brave New World , you are right on target. But, will these signals affect normal, ordinary people? Listen to more of this article:

"Experts we have spoken with believe that such mentally destabilizing signals would, naturally, most strongly and primarily affect individuals whose grip on mental/emotional equilibrium is less than solid; but EVERYONE within range of the transmissions would have distinctly negative reactions to some extent or other." [Emphasis was in the original]

While these "mentally destabilizing signals" would primarily affect people who are on the fringe of mental stability, everyone will feel somewhat mentally distressed. How many jobs in Northern California have been lost because people could not function anymore at the consistent level demanded by the employer? How many marriages have been ruined? How many careers have been ruined? How many teenagers, who are normally mentally and emotionally stressed anyway as they are going through these trying years, have been pushed overboard into real emotional or mental disturbance? We shall never know, and the Mass Media will never report a story like this.

Most people want to believe their elected and unelected officials have their best interests at heart. People will believe heinous acts by government officials might occur because of negligence, or selfishness, or by criminal acts; but, no one wants to believe their government officials have a specific agenda designed to destroy the lives of its citizens. To believe this is to stay up all night, every night, worrying about whether you might be the next target.

Normal, everyday Germans during the time of Adolf Hitler found themselves in the same quandary. Despite the fact that Adolf had publicly published Mein Kampf , in which he told the Jews and others he was going to murder them all, most Jews refused to believe. They found all sorts of excuses to not believe. When the killing began in earnest, and many non-Jewish Germans came face-to-face with some of the evidence, most of them refused to even consider the possibility that such murder on such a scale could ever take place. Even German citizens living in close proximity to the mass murder facilities refused to even believe that the smell of burning human flesh that was pouring forth from the chimneys 24 hours per day could possibly be human. They discounted the sightings of countless railcars going to these facilities full of people and leaving empty. Just before the end of the war, when the Allies broke the story of such atrocities, one German woman wrote to her friend that "someone should tell Adolf of these terrible things; he surely does not know"!

What is your reaction to these truths being shared with you now? Are you going to be a believer or are you going to bury your head in the sand deeper and deeper?

THE TIMING OF THE NORTHERN CALIFORNIA HAARP EXPERIMENTS

When were these experiments being carried out against the unsuspecting tax-paying citizens of Northern California? Let us return back to this

article. "This activity has been ongoing for most of 1999--with a pause of a couple of months or so during the summer (the perpetrators were obviously busy elsewhere!). These signals, primarily in the ULF (ultra-low-frequency) and ELF frequency range, have been recorded on a variety of equipment by several researchers and are in the process of being analyzed. During the many months these signals have been broadcast, they have been transmitting TWENTY-FOUR hours a day, EVERY DAY!!" [Emphasis was in the original]

One of the details of these experiments that need to be "analyzed" is the fact that, once a specific frequency for a certain type of brain function is proven, that frequency of transmission can be recorded on a computer. NewsHawk explains the science behind this insidious effort. "The purpose of all this high technology is to plot and display a moving cluster of periodic brainwave signals. The illustration shows an EEG display from a single individual, taken of left and right hemispheres simultaneously ... By using these computer-enhanced EEGs, scientists can identify and isolate the brain's low-amplitude 'emotion signature clusters', synthesize them and store them on another computer. In other words, by studying the subtle characteristic brainwave patterns that occur when a subject experiences a particular emotion, scientists have been able to identify the concomitant brainwave pattern and can now duplicate it . These clusters are then placed on the Silent Sound[TM] carrier frequencies and will silently trigger the occurrence of the same basic emotion in another human being!" [Ibid]

In layman's language, once these specific frequencies that causes a certain emotion or thought is precisely identified so exactly that a "fingerprint" of it can be made and stored on a computer, then this "fingerprint" can be sent out over other types of Mass Media! In other words, the frequency of brain wave that is proven to cause suicidal thoughts, for example, can be recorded by computer and then subliminally sent out via radio programs or TV shows! Or, if the government wants to cause huge numbers of people to suddenly go into depression, or into euphoria, they can emit the recorded signals via radio or TV and reach the entire population over a period of time!

This capability can even implant specific thoughts or commands into the minds of people. Huge numbers of people within a population can suddenly receive simultaneous thoughts or commands, causing many numbers of them to suddenly carry out the command. If the command is to "kill anyone", you suddenly might have large numbers of unexplained violent assaults by people who have never committed crimes before. Of course, the application to Biblical prophecy is direct and very serious for citizens living in the End Times. Listen:

"And I saw one of his heads as it were wounded to death; and his deadly wound was healed: and all the world wondered after the beast." [Revelation 13:3] Notice the word, "all" in this sentence. All the peoples of the world looked upon the Beast [Antichrist] with amazement and awe. The Bible then tells us exactly what "all " the peoples of the world were saying in unison.

"And they worshipped the dragon which gave power unto the beast: and they worshipped the beast, saying, Who is like unto the beast? who is able to

make war with him?" [Revelation 13:4]

"All" the peoples of the world will be simultaneously amazed and thrilled by Antichrist. This admiration will lead "all" the peoples of the world to "worship" the dragon [Satan] and his man, the beast [Antichrist]. As I have read the volumes of material on the New World Order Plan, I realized that their #1 goal was to successfully stage their New Age Christ -- Maitreya is his name. Their #1 goal after Maitreya is successfully staged is to lead all the peoples of the world into a worship of him, a worship of him as God. New Age author, David Spangler, stated this part of the Plan most succinctly.

"No one will enter the New World Order unless he or she will make a pledge to worship Lucifer. No one will enter the New Age unless he will take a Luciferian Initiation", David Spangler,Director of Planetary Initiative, United Nations. [

But, then, Spangler chills the soul of any Born Again Christian who knows their Bible generally and prophecy of Revelation specifically. "The light that reveals to us the presence of the Christ comes from Lucifer. He is the light-giver, he is aptly named the Morning Star because it is his light that heralds for man the dawn of a great consciousness. He stands as the Great Initiator, the one who hands the soul over to the Christ." [Ibid]

Did you get that last sentence? Lucifer is the "one who hands the soul over to the Christ" for worship. Wow! How much more bold and Biblical can you get? The New Age Plan of the New World Order Kingdom of Antichrist is to so prepare mankind through the workings of Lucifer as the "Great Initiator" so that he can hand each soul of each person over to Antichrist. Isn't this just what prophecy declares?

"If any man worship the beast and his image, and receive his mark in his forehead, or in his hand, The same shall drink of the wine of the wrath of God, which is poured out without mixture into the cup of his indignation; and he shall be tormented with fire and brimstone in the presence of the holy angels, and in the presence of the Lamb: And the smoke of their torment ascendeth up for ever and ever: and they have no rest day nor night, who worship the beast and his image, and whosoever receiveth the mark of his name." [Revelation 14:9-11]

"And the first [Angel] went, and poured out his vial upon the earth; and there fell a noisome and grievous sore upon the men which had the mark of the beast, and upon them which worshipped his image." [Revelation 16:2]

"And the fifth angel poured out his vial upon the seat of the beast; and his kingdom was full of darkness; and they gnawed their tongues for pain, And blasphemed the God of heaven because of their pains and their sores, and repented not of their deeds." [Revelation 16:10-11] We can see here that God considers all people who have had their souls delivered to The Christ [Antichrist] as being of "his kingdom", and they are all brought into Divine Judgment.

Conversely, we see the reward God heaps on those who refuse to follow the Antichrist. "... I saw the souls of them that were beheaded for the witness of Jesus, and for the word of God, and which had not worshipped the beast, neither his image, neither had received his mark upon their foreheads, or in their hands; and they lived and reigned with Christ a thousand years." [Revelation 20:4]

CONCLUSION

We must conclude that, if Antichrist has the capability to condition entire populations and to trigger the response they wish on most of the people, the fact that significant numbers of people refuse to give in to this efficient Mind Control must mean that God is Divinely protecting His own. We see huge numbers of people being saved in the 7-year Tribulation Period, and we see those people getting specific rewards for just such resistance. Therefore, God has to be protecting His own people.

At the conclusion of NEWS1344, concerning the occult map of the USA being used in the school shootings, we presented three Scriptures promising that God does "seal" His own people from Satan. Let us look now at Psalm 91 for other such reassurances.

Read carefully verses 1 and 2, for the promises God gives below are reserved for someone who carefully and daily fulfills the conditions in these two verses. These promises are reserved for someone who "dwells" in the "secret place of the Most High", who depends solely on the power of the Lord for protection.

"Surely he shall deliver thee from the snare of the fowler, and from the noisome [deadly] pestilence." [Verse 3] Notice the firm promise word, "shall", not "might" or "maybe", but "shall".

"Thou shalt not be afraid for the terror by night; nor for the arrow that flieth by day; Nor for the pestilence that walketh in darkness; nor for the destruction that wasteth at noonday." [Verses 5-6] We are instructed not to be afraid of anything the enemy of our souls -- Satan -- can throw our way, including the most powerful Illuminist Witchcraft in the world, or their high technology.

"A thousand shall fall at thy side, and ten thousand at thy right hand; but it shall not come nigh thee. Only with thine eyes shalt thou behold and see the reward of the wicked." A thousand people may fall at our side, and ten thousand may fall at our right side, but the true believer in Jesus Christ shall not be affected.

"Because you have made the Lord your refuge, and the Most High your dwelling place, there shall no evil befall you, nor any plague or calamity come near your tent. For He will give His angels special charge over you to accompany and defend and preserve you in all your ways of obedience and service. They shall bear you up on their hands, lest you cast your foot against a stone. You shall tread upon the lion and the adder; the young lion and the serpent shall you trample underfoot." [Psalm 91:9-13, Parallel Bible, KJV/Amplified Bible Commentary].

God will prevent His people from falling prey to these insidious technological breakthroughs. Make no mistake about the fact that Satan is revealing these secrets to massive Mind Control just as fast as God allows him to reveal them. But, this "calamity shall not come near you", God promises.

With King David, "I give myself unto prayer." [Psalm 109:4]

Truly, the sudden advent of population-wide Mind Control in the hands of the Satanic Illuminati is one more sign of the End of the Age. Are you spiritually ready? Is your family? Are you adequately protecting your loved ones? This is the reason for this ministry, to enable you to first understand the peril facing you, and then help you develop strategies to warn and protect your loved ones. Once you have been thoroughly trained, you can also use your knowledge as a means to open the door of discussion with an unsaved person. I have been able to use it many times, and have seen people come to Jesus Christ as a result. These perilous times are also a time when we can reach many souls for Jesus Christ, making an eternal difference.

If you have accepted Jesus Christ as your personal Savior, but have been very lukewarm in your spiritual walk with Him, you need to immediately ask Him for forgiveness and for renewal. He will instantly forgive you, and fill your heart with the joy of the Holy Spirit. Then, you need to begin a daily walk of prayer and personal Bible Study.

If you have never accepted Jesus Christ as Savior, but have come to realize His reality and the approaching End of the Age, and want to accept His FREE Gift of Eternal Life, you can also do so now, in the privacy of your home. Once you accept Him as Savior, you are spiritually Born Again, and are as assured of Heaven as if you were already there. Then, you can rest assured that the Kingdom of Antichrist will not touch you spiritually.

If you would like to become Born Again, turn to our Salvation Page now.

We hope you have been blessed by this ministry, which seeks to educate and warn people, so that they can see the coming New World Order -- Kingdom of Antichrist -- in their daily news.

Finally, we would love to hear from you.

You can contact us by mail or email.

God bless you.

Malvo was here illegally. Many of the 911 scum were here on expired visas.
Something needs to be done, our borders are sieves and terrorists know it.
Time for the military to patrol the borders.

that wouldnt have stopped malvo, or any of the 9/11 monsters. the INS
is at fault, not the border patrol. michelle malkin, at 'national
review', has written extensively on this.

I also use my name and real email address. Get about 5 pieces of spam a day and hit the del key on them. When someone asks a question that is best answered direct such as a schematic and I go to the trouble of looking it up and scanning it in and it gets bounced by a bad email address I do not send it again.

does that really bother you

who cares who a started the idea,the fact is many differant people will
support them from right and left wing,employed and unemployed,every race
color and religion.

do you really hate democracy so much????

Russian people were no worse off under communism than they are under
capitilism,the only winners since end of the cold war are those in Russia
with power and money,the ordinary worker is worse off.

why should i have to move

for start i am not a communist or capitalist,i am socialist,but recognise
the plight of those in so called capitilist Russia are no better off than
they were before.

true communism could of worked but dirty tricks by UK and US,saw that would
never work.

the cold war to make communist soviets look like the enemy,when in fact they
never were,you used every trick to dicredit Moscow as with other countries
you do not like now,if we ever have a socialist goverment in the UK again,i
hope we do,but i bet the US will stick there noses in and destabilise along
with our MI5/MI6 and right wing groups.

those to the right have a distorted view of democracy

2232. Scanner control apps for Linux

Newsgroup: rec.radio.scanner
Date: 2003-02-09 16:10:26 UTC
From: Jeff Seale <jseale18@insightbb.com>
Message-ID: <S3v1a.42984$2H6.513@sccrnsc04>
Source record: 36865

Are there any scanner control apps made to run on the Linux OS? I'm especially looking for one that will work with the Bearcat 780.

screw you, how about support the troops week????
show a little gratitude you f..... fool
thank those in uniform for defending your right to go out and protest you
poppas ass
where the hell where you when slick willy was sending troops to Serbia,
Kosovo, Macedonia, Haiti, and bombing Iraq,Afghanistan,Sudan???
you were know where to be found you loser
get a life and thank the people in uniform for defending this great nation
if you don't like it, get the f..... out
short minded are we, have you forgotten Sept. 11th already????????
you assholes want it both ways.

GOD BLESS AMERICA!!!!!!!!!
ONE NATION UNDER GOD!!!!!!!!!!!!!!!
THANK YOU TO EVERYONE IN UNIFORM WHO IS CURRENTLY DEFENDING THIS GREAT
NATION!!!!
WE DO SUPPORT YOU!!!!!!!!

no member of the armed forces are supporting my freedo

they chose to go to fight wars,i did not,what happens to them in war is
there hard luck.

they chose armed forces jobs as an easy ride,good pay and good training,they
did not realise one day they would have to fight.

they have no minds of there own,i cant trust anyone who cannot make a
decision but have to be told its for your country

i support normal Iraqi people

and again why do you yanks just go on about yourown forces

in all recent conflicts mentioned there have been UKforces and other
european forces involved

Rumsfield made some very anti German statements the other day,is he unware
there are german soldiers defending Kuwait

Hi George:

Thanks a lot for that! While I was watching the race, I had your feed running. Man, what a blast! As we have no Nascar in Toronto, I'll never have the luxury of listening on a scanner, so this was very cool. We have the Molson Indy, which is 'okay' for scanners, but I'm a major Nascar fan.

Much appreciated
Mike T

Yea, some guy 'claims' to have degrees in mechanical and
electrical engineering, 'claims' to have been a licensed radio
engineer and computer system analyst, 'claims' to have worked for
NASA, 'claims' this and 'claims' that. Just because he makes all
these claims and put it on a web site does not mean you have to be
stupid enough to believe it.

A response so ludicrous as to undermine whatever other views you may be pushing on this issue. One does not have to even debate economic issues to get to the heart of the matter. The Russian people *elected* their last president. The Russian people are no longer under the heel of the NKVD or KGB. The Russian people now have a press that, while not perfect, is miles more free than that which they had under communism. I could go on and on, but I suspect it wouldn't matter.

the Russian people are still under the thumb of corrupt presidents nd ex KGB members affiliated to russian mafia

the ordinary russian/and those of former states are left to rot

i have famlily in former East Germany who would welcome the communists over current West German control

capitalism has made the people of the UK and many americans poor

people only count in either country if they are wealthy,normal workers are slaves of the system,mainly on low wages/bad working conditions,limited human rights.

we need a fairer system of socialim,take the wealth of the few in charge and make it work for others,impoving wages/benefits an working conditions

i say again coward of freedom?
where were you when slick willy was bombing nations and killing people in aspirin factories???
i say again, Yugoslavia,Serbia,Kosovo,Macedonia???
Iraq, Sudan, Haiti???????
we have the right under OUR Constitution to defend ourselves, we do NOT need your permission!!!!
your double standard is sicking
but then again we could wait until the terrorists release some bio or chemical weapons in Berlin or London, then maybe we would have a reason to do something?
your methods and theories do not work, remember
Adolf Hitler???
they tried to contain him in the same way the useless UN is trying to contain Saddam, and it doesn't work.
we don't want war, we don't want our soldiers in harms way, but we must defend OUR freedom at all costs
if you don't like it, tough shit
the UN & EU are a joke, both run by communists who only envy the US.

GOD BLESS AMERICA!
ONE NATION UNDER GOD!!!

As one who was around during WW2, I can remember people saying "it wasn't our war", that lasted until during the last round of "peace talks" the Japs bombed us at Pearl Harbor.

Appeasement is never an answer, and only works to the advantage of the tyrant. We will watch in the coming days as Sadam will give the appearance of capitulation, to further attempt, to divide the world on war against him.

I am proud of my President, and the fact he has stood up to the worlds doves. I suspect that after deposing Sadam and locating all the weapons of mass destruction, we will still hear "he would have given them up if we just waited".

The stance of Germany and France is no surprise, and the French will be on board as soon as it looks like the coalition is winning. The real facts will come out as we discover the invoices from Germany, France, and Russia for the precursors, rocket motors, and other devices.

Germany and France will get this dumb "I had no idea it was for weapons" on their collective faces. The Russians will simply deny any facts, and claim that dissidents stole and sold to Iraq what ever is discovered.

The real pity is that Sadam really thinks that he will be saved with his present tactics. Talk about in denial...

The only thing he will really accomplish is to prove the UN is a 21st century version of the League of Nations and is just as effective.

who is slick willy???/

keep taking the tablets,do you really believe that crap

how is bombing Iraq defending yourself

things have moved on since Hitler

if and i say if Saddam launched something,which is highly unlikely modern spy satelites/aircraft/spys on the ground etc will detect this,defence systems will then shoot it out of the sky,we then have reason to go in,no problem there,justification.

there is every likelihood the UK will get a terrorist attack,we have had already lived with terrorism for some time now.

911 had nothing to do with Saddam

top CIA/MI5 and investigative journalists/middle east experts and military and ex military are in agreement,there is no evidence of WMD in IRAQ,all stuff found is old,you can only hide so much,many things you could not hide,the UN has found nothing substantial

so go ahead defen yourself,go against the UN then we in the UK and Europe will have justificaton to invade the US

I respect that belief, but mine is that there is a god, however I think
he/she is just waiting for the U.S. to screw up so badly that its time for
the second apocalypse. With Bush as president, we can't go wrong there.

Fact or opinion? If fact, I am sure you can point me to the source.

While the media attempted to portray him as a stupid person, the facts are his SAT scores and grades were superior to the brilliant genius Al Gore.

While daddy may get you a chance to set your butt in a Jet fighter, he sure can't keep you alive if your stupid.

if after Saddam is deposed and if weapons are fund you can have all my
scanners as i very much doubt any real proof willbe found

look at Afghanistan we were assured by theUS of hundreds thousand Osama
supporters and lots of weopons i caves,hardly any were ever found.

yet our puppet blair still supports you

as for Germany and France supllying Iraq,more likely CIA and your arms
suppliers,who have a long history.

Posting here in hopes someone can point me in the right direction or proper newsgroup for discussion of two-way handheld radios such as GMRS.
I am trying to determine which models would best suit my needs.
Anyone in here with experience using these?

I'd appreciate any info you folks could provide.

Thanks,

Phil

Teaching 9-1-1 and ARES folks about communications and how they work..Paging is a whole different world and most folks just plain don't understand the formats and how it all works. There is nothing like a demo to show people, and explain it as you do it in front of them. Try to explain Two-Tone, QuickCall, and or Long-Tone to someone once. Watch the look on their face. *lol*
As for fire departments helping me..What a laugh. Most of those people don't have a clue how the two-way radio works at their very own fire barn, muchless the paging system.

I bought a M1 frequency counter (to decode the tones over the airwaves), and a totally programmable tone encoder now. Don't need the program anymore. But thanks for all the help anyways ;)

Dan

Genessee County's climbing on board fairly soon. All they have to do
now is come up with a stack of cash to pay for the upgrade. As of
now, the city of Flint will stay VHF analog; no money. That should
make things interesting, 1/2 the county digital trunked, 1/2 VHF
analog. Should make for some "interesting" mutual aid situations.

why is seeking a fairer wealth distribution system meaningless???

just shows hw much you care for society

wealth is not only money,thats wheere you get it wrong

i feel far more wealthy not working and little money than i did working for many years,paying into a tax system that supports this war

no way

you want war you and UK taxpayers can pay for it,leave me out

i will just sit here and claim my dissability benefits and let others work to pay for this sick society

you're a racist. that much is plain

the fact is, some arabs have invented an ideology...islamic
fascism...which calls for your death, unless you convert. one of the
fathers of this was sayyid qutb. the most recent ideologue is bin
laden's right hand man, ayman zawahari.

but you, being a racist, think the arabs are too stupid to invent a
genocidal ideology.

>
>911 had nothing to do with Saddam
>
>top CIA/MI5 and investigative journalists/middle east experts and military
>and ex military are in agreement,there is no evidence of WMD in IRAQ

uh, no they dont. in fact, they say the very opposite. that was the
essence of powell's presentation. only a moron like you could believe
hussein is telling the truth.

,all
>stuff found is old,you can only hide so much,many things you could not

>hide,the UN has found nothing substantial

that's because you're too stupid to understand what UN resolution 1441 said.

it did not say ONLY that the inspectors had to find WMD's. it said the iraqis had to tell the inspectors what they did with weapons UNSCOM found in previous inspections since 1994...like 8,000 liters of anthrax...like 13,000 chemical warheads.

but you're such an anti-american fundamentalist, you dont let facts stand in your way.

>
>
>so go ahead defen yourself,go against the UN then we in the UK and Europe
>will have justificaton to invade the US

seems you're against war, except when you're not.

That was definitely inconsiderate of Emilio.

While the guy was signing the autograph, he would not have been able
to use that arm to shield himself from blows.

If a nightstick connected because of that, Emilio's going to find
himself liable for the injury.

sorry the germans will not be defending kuwait,my mistake but they are there with there NBC detection vehicles and so will be helping.

the evidence put forward has not been from intelligence or not unbiased intellignce it is being put forward to fool the people.

our PM even tried a plagiarised 12 yr old document to fool us with.

many top military and former military and said middle east experts oubt any of the evidence being presented

as for freeloading,i never asked anyone to defend me or the UK

and a for rascist,i dont think so,i have never been rascist in my entire life,i am opposing this war that does not make someone rascist,we can help the Iraqi people overthrow there leader,but we are not doing that we are just going to invade without any threat or attack from Iraq.

i actualy know several military people,and class them as friends but cannot understand anyone either Iraqi or US/UK who will so easily lose there life for a politician

the whole idea is cazy to me

you may get them,i hope not though

lets lighten up anyway

you know my views and dissagree with them and i dissagree with yours.

i am sure we all agree war is not the way we want to deal with things in 2003.

there will be lots of people in london on 15 th Feb for the demo,the war is very unpopular in the UK

HOPEFULLY WE WILL GET RID OF BLAIR AND CO BEFORE THE WAR STARTS,there is a good chance of that.

What does this have to do with shortwave radio?

Anyway the US is not a "democracy" It is a constitutional republic.

You might also want to consider using the newer VHF MURS frequencies, and
equipment. Possibly better performance, and no license required, or fees!

> years of this crap. Hopefully we'll survive it but I have my doubts.

It that type of attitude that has
caused so much problems. Yes, you
have rights. The problem is that
people like you abuse those rights.
Every right has assumed responsibilities.

In the old days we did not have to use
government, the police or the courts.
We took assholes and non conformists
out and lynched them.

Ashcroft is a member of the Assemblies
of God, as is Pat Robertson and Adm.
Vern Clark (Navy CNO). The AG church is
one of the first churches to stand for
freedom.

The reason that we are in this mess in
the first place is that people like you
elected Clinton and other liberals. It
is the democrats who are the root of all
evil in America. They have become the
party of the well educated and the powerful.
It is now the party of the yuppies, not the
working man.

Felix,I believe that you have answered your own question.By saying that the local yokel police dept,are not the brightest crayon in the box,so most of what you monitored them saying,is mostly hear say.The reason being,the debri field being mostly in the North to North East corner of the state of Texas,that would mean the debri in California,and New Mexico that was found,those people would be in question.Personally speaking as a Law Enforcement Officer in the state of Texas.I don't think you have anything to worry about,if you find any type of debri on your property,unless you pick the debri up and try to take it to the authorities,then you may have to answer a few questions but,if you call and have the authorities come to the site of the debri you have located,then they will see for themselves,that the debri is located where it orignally landed.This is just my opinion,but I can see where you may be of concern.I hope this little bit of input will help you with your decision.

i hate Saddam Hussein where you you when Socialist groups across the world
were demonstrating against chemical attacks on the Kurds???

i know where i was,but getting no support from UK or the US then,Saddam was
then needed by US and UK.

he is evil and needs to b dealt with,but not in this way,we are stopping
much of his terror anyway.

what are the US going to replace him with,another PRO US dictator thats what
they will do.

maybe your motives are pure,i respect that,but our poliicians have differan
adgendas.

its them i distrust

I have a friend who works at the HAARP transmitter site in Alaska.
He loves all these whacked conspiracy theories, but he points out
something nobody who perpetuates these ridiculous theories will
admit, the HAARP site is open to the public. You can go see for
yourself what they are doing. If they were doing one tenth of the
crap the whackos claim, the place would be locked up tighter
than your daughter's chastity belt and M-16 toting guards ready to
drill you full of holes for even thinking about approaching the place.

You are most welcome Patrick. I'll be visiting LA next month so I'll
have a listen with my 250D and let you know how well it works on
their digital system.

Jon

Now we have the picture, a freerider leach on society. Let
everyone else do the work and pay for me. Let others go in harms
way to keep me free. What a useless looser twit.

If those US soldiers had not been so willing to easily lose their
(not there) lives in WWII you would be speaking German today.

I've had that happen often enough that I now just post to the group that I have additional information and if they would like me to email it to them, send me an email request. On one occasion though, I had someone send me an email requesting information and after I had worked about a half hour drawing a schematic and sending it, it bounced. The guy is lucky I didn't know where he lived.

if you work you are a loser

i in my time hav worked real hrd
but what do you get for it???

bugger all thats what

i have a dissablilty,thats a fact,if i did not i would still be working hard

but with this war on the way,i cant see the point of my taxes going to
something i oppose.

part of my dissablity is down to society and its perceptions and not making
allowances for problems that i have,so fuck them,if they cant be bothered to
make allowances,why should i bust a gut to try and work for them

i get more out of the charity work i do than i ever did out of paid work

regards

yes agree 100% on that

but things were differant then,everyone was forced to do there bit,todays
armed forces have a choice.

but yes US help in world war two,we and most people in the UK thank you for.

but we are talking about now not the past.

If Mommy and Daddy weren't feeding you, or the Government wasn't giving you money, you'd learn how to be a 'loser' very quickly... you'd get hungry.

Get out of bed you lazy turd, and get a job.

yes i accept that some people have to work,but if the workplace does nohing
to help you and your dissablity then its there loss and not mine.

i have come to accept that,so rather than trying to fit into the workplace,i
will stay at home and do my charity work when i can
which is far more rewarding and less stressfull

you can say what you want,it means fuck all to me,when it did that is wha
caused problems.know i just get on and do my thing.

no money,but better satisfaction

you go to work,what are you getting out of it,i feel real sorry for you

go on strike if opposed to the war,leave your job,or put up anti war posters
and send anti war emails to people at work.

have fun

```
i see
now he wasa much better president i met him in london just before
christmas,shook his hand

he also made a good speech last year at the labour party conference

ok but not brilliant

you really are sad arent you???

i feel real sorry for you,my life is going well

i can scan all day,go all over the place in freinds cars,you have to work

its people like you at work that me see that work is a waste of time.

my BC250 should be with me in the morning,so will have another scanner to
add to my collection

we will have to stop meeting like this i have 53 groups to keep up with

my dissabilty prevents me from driving

and i have some good friends,i help them in other ways,the radio i have been sent for free by a US company for work i did in the UK once for them,in pushing there scanners i the UK .

I am confused, you live with your parents and your on the national dole.

Next you "cant see the point of my taxes"...

What taxes are you paying?

That may be true of the church but is not true of either Ashcroft or Robertson. We should never ever under any circumstances have any individuals in this country -- citizen or not -- locked up without the ability to communicate with family or an attorney, or not be able to communicate with an attorney privately, or to be locked up without charges.

These are Constitutional rights: The right to legal Consul. The right to a speedy trial. Innocent until proven guilty. The right to know the charges against you.

We are a nation where the phrase "prove your innocence" was something only the grossly ignorant would say.

We were once a nation where one could speak to your attorney without being listened in on.

We were a nation where anyone on our soil -- citizen or not -- was given equal protection under the law.

All those things are relics because of your "religious man" Ashcroft.

No, I have no love for clinton, but evil is the root of all evil in america. Ideology -- left or right -- is a convenient place to hide your evil. Clinton was dangerously irresponsible. Ashcroft is

dangerous. Clinton's sexual exploits won't scar america 100 years
from now, but Ashcroft just might.

Maybe it's like this: Paying attention is 'taxing' on him.

Or something like that! :-)

not on the dole,i do not have to find work,i have been examined and qualify
now for Dissability allowance.

what i was getting at was that i was paying tax for these things

we have problems with hospital and school funding,no problem with that but
to pay for a war we cannot afford,i dont really want to pay my taxes for
that.

if i do get a job fair enough i will have to pay the tax,but for now let
others pay for it

Al Gore obtained 1355 on the SAT
G.W. obtained 1206 on the SAT
Bush beat Gore? Hardly.

I am now finding that there was a hoax perpetrated about W's IQ. There is no known IQ for Bush AFAIK. Why? Maybe he is ashamed of it?
However, the last known IQ for Gore is 134 AFAIK. My IQ, taken when I was 15 almost 16, was 137. I guess I'm smarter than Gore as long as I have the current facts in front of me. Add that to the fact I graduated high school a year early, I should be working with McCain to help him win in 2004.

John

P.S. I don't know what bollocks you're talking about as far as jet fighters. I like planes but I don't have a "daddy", as you say, to give me a close-up.

yes thats it exactly

as soon as anything is launched from Iraq

A=shoot it down
B=go in guns blazing

i have not been talking about out and out pacifism,that does not work

maybe extend the no fly zone to cover all of Iraq,but get food and medical aid into Iraq big time.

How do you know 12725 mhz and 12750 mhz. are used for that purpose? The 12 ghz. frequencies used for Broadcast Auxillary typically are fixed point to point. How do you know that they are not fixed point to point TVLs from City Hall or the State Capital(if one is in the area) to the Fox TV affiliate? DTV and Dish Network and NIMIQ use 12,200-12,700 mhz. Your proposed method of downconverting a 12 ghz. signal to 2 ghz. would not be practical due to downconversion image problems. Additionally, if the 12 ghz. signal is digital, forget it.

Not really. I have had my videoscanner for almost a year. It works as
advertised. It detects and processes NTSC video and subcarrier
just fine. But unless the price has dropped dramatically since last year, it is
not $250 but closer to $400. Be advised that the "interesting" video is ABOVE
the 2,450 mhz. cutoff of the awful R3 and other similar products. Contrary to
common wisdom, terrestrial low power 2 ghz. signals have a much greater
reception range than one would otherwise expect.

I have 4 Scantennas tower mounted at 125 ft. It is a great antenna.
The longest element is resonant for low vhf. If you must, trim slightly
equally from both ends of the longest element. Drastric cutting at other
places may cause inefficiencies. Instead of doing that, mount a ground
plane antenna outside. The elements are maybe 8 or 9 inches. I have
several on my tower. They take up little space. Indoor antennas will
suffer from structure attentuation.

hey guy since i havent got a scanner wel not a good one can some one have a look on these freq`s i found heres the post.

hi,

i operate the world largest optical telescope the vlt which is in northern chile, about 60km north of were the US naval ship ran aground recently...

our telescopes have been having problems the last two weeks... we are getting beamed with high energy microwaves from about 1 to 3 ghz... which cause the computers in the telescope cell to reboot...

who we we contact to tell them to stop beaming us??

Here's the frequency spectrum of the signal that is hurting us:
==========
2.789 ghz -39.5 db
2.765 -35.0
1.899 -52.33
0.894 -45.83
0.464 -15.67
0.140 -17.67

depends what you mean by contribute

worked since leaving school,hard worker,considrd a "star"by several employers,but employees thats differant,most dont like hard workers,in the UK,and you get pickd on for it,then depite being considered a harder worker than the rest you get no support from employer

so now i do charity work instead,where no reward apart from self satisfaction.

my views at school,college and work have not changed much regardless of what i have earnt or not earned

i have just had a more right wing friend of mine want to come with me to the demo on the 15th,and that was a surprise to me,i had no idea he has the same vies on me on this one,even down to the fact there is no evidence to link Osama to Saddam,and he states that this week some MI5 leaked a doucument stating how wrong the government is in saying intellience have proof,well MI5 suggest otherwise.

Please!. 257.1500 mhz. is an Air Force frequency. It probably is an
Air Force reserve squadron in that part of the country. Fltsatcom analog
downlinks typically are in the 260 mhz. range.

Yes. Any splitter inserted in line will result in some degree of signal attentuation.

Your receiver cannot reject certain image or intermod frequency signals.

> You have CASCAR though.<

Yeah, but I don't even know (or care) where they run these races. The Toronto Molson Indy is run in downtown Toronto, so a scanner listener can hear these races without difficulty. In fact, I'm located about 2 miles from the Indy, and I can still receive some comms. This Cascar thing is of no interest to me since I don't know any of the drivers. (I'm not saying it's not worth listening to, just not my thing)

My favorite experience was when the 1993 World Series was happening. Since, at the time, I worked the afternoon shift and was located 1 block from the Skydome, I listened to the CBS director calling the game from the remote truck. FWIW, that guy was directing 15 (or so) cameras, live in real time over the entire network. Talk about a high stress gig! Like another poster mentioned, the between 'chatter' was as interesting as the game coverage. Very, cool.

By design discone antennas have little or no gain a specific frequencies.
Its advantage is that it is broadbanded. Remove the discone. Install a
Scantenna with a Radio Shack 300 -75 ohm mast mount pre-amp for VHF/FM/UHF TV
model. Mount the Scantenna as high as possible. Use RG6 coax cable.

Michalkun wrote:

If you are hearing them on a police frequency it is not a police frequency interference problem. It is the inability of your poorly designed scanner/receiver to reject the unwanted fast food signals.

The R7000 is NOT a good SSB receiver. It seems that feature was an afterthought. What marine frequencies exactly did you plan to monitor with the R7000? There are no marine SSB frequencies above 25 mhz. Unless the receivers' scan circuitry has been modified, your options for signal stop speed are from 0 to 15 seconds delay. After 5, 10 or 15 seconds, scanning resumes irregardless of whether the two way comm has completed. I have 5 R7000s and 2 R7100s. Two of the R7000s have been modified for "normal" scanning. They work great. The others to include the R7100s have not been modified and are a pain with scanning resumes after a certain time period. ICOM designed the radios that way so it would not have to pay royalities to Uniden or whoever owns the patent. The ICOM 7100 is slightly more sensitive than the R7000 and has a superior signal intermod circuitry.

That doesn't prohibit someone to use trial-and-error techniques to determine the protocol and to write their own software. It isn't reverse engineering and it doesn't infringe on any copyright. Patents on software are idiocy and are not applicable.

Frank

The 2.0 ghz. performance reviews of the R3 bottom lines to being awful. It is "deaf". The video demodulator is insensitive and it apparantly is a battery hog with short recharable life and the unit operates quite warm in the video mode. You will not receive any TV station uplinks. Typical uplink frequencies are 6700 mhz. for C band and 14,000 mhz. for Ku band. The 2.0 ghz. remote to base frequencies are from around 1900-2100 mhz. Most likely the signal format would not be compatable with the R3. In addition to the previous comments, FYI most of the "interesting" video transmissions are ABOVE the 2450 mhz. cutoff frequency of the R3. I bet nobody told you that before you bought it. If you want something that will receive 2400-2600 mhz. signals, buy a videoscanner and give up on that expensive overrated toy.

Conversely if an accident happens the lawyer can argue the two comms distracted the driver and therefore he was negligent by not concentrating on his driving.

Source record: 36820

What frequencies are used on the RF remote control door locks? I'm referring to the device that is usually built as a key chain fob. In particular, the device I have uses the PT2262 IC on a circuit board labeled "PTX-3LJ". There is no other component of circuit board labeling (other than C1 and Q1). The case specifies "FCC ID J5523518T1".

A search with a PRO-43 and a PRO-93 failed (roughly: 25MHz-1.3GHz with holes). I also checked 150-2194 kc's and 76-88 MHz with a Sony AIR-8.

Thank you.

Frank

For what it is worth, years ago I had the TV adaptor for the R7000 receiver. The performance was awful. The signal conversion losses were extreme. I quickly sold the TV adaptor. If you could do what you propose, I think you would conclude the same result. You're not missing anything by not having that capability.

Heck, tent evangelists in the late 1700s and 1800s knew how to use hymns to "brainwash" the attendees into "giving til it hurts" for those minds were open to suggestion while in music-induced trance. Documentation available on the web.

In Eaton county, the sheriff has gone digital via their HT's, but mobile radios still use the uhf frequency. They input their output on the digital system into their uhf repeater, so no matter which radio is being used, it's heard on both outputs. Seems to work well for them, in most instances the HT's work well, and when the units are rural, they use the car radio. It'll be ages before the fire service switches over, mainly due to budgetary reason.

It's my understanding that anything from Iraq would probably be targeted at
Israel. Why doesn't the U.S. just stop putting it's finger in the boiling
hot turmoil that is that area? Oh, yea, the oil and the money.
Missile defense is such a joke.

No you would not still be fighting, you would be speaking German.

I just LOVE multiple-choice tests. I prefer to answer in essay, though. I would send elite assassins to take out Sadam and his family. I would then put George W. Bush on trial for treason, as he is using the U.S. military to gain additional oil profits for himself and friends, while virtually ignoring the situation in N. Korea and elsewhere. Oh, and here's a fun proposition: If the U.S. citizens in the southern tier states start to use force against illegal Mexican immigrants, would the situation be not similar to Kosovo and Bosnia? That is to say, wouldn't U.N. "peacekeeping" forces be used then on U.S. soil? On Sat, 08 Feb 2003 23:48:31 GMT, "Jomes X. Monaham" <jomesmicx@optonline.nerd> wrote:

And nor would they be issuing QSL's to SWL's who send reception reports to
them. I am a proud owner of a HAARP QSL.

Anyone care to try to explain how a high-frequency radio signal could
control someone's thoughts? I mean, besides all the conspiracy nuts and
preachers on WWCR.

US may cremate soldiers killed with toxic weapons
By Esther Schrader in Washington
February 8 2003

The United States President, George Bush, said Iraqi field commanders had been given authority to launch chemical weapons against advancing US forces, prompting the Pentagon to consider battlefield cremations of slain soldiers.

"We have sources that tell us that Saddam Hussein recently authorised Iraqi field commanders to use chemical weapons, the very weapons the dictator tells the world he does not have," Mr Bush said. He did not elaborate.

It is the first time the Administration has made such a charge.

Cremation is being considered to prevent the spread of chemical or biological agents from contaminated bodies to the US, defence officials said.

The Pentagon has for decades gone to great lengths to recover and bury every US serviceman and woman killed abroad.

"This would be a first," said Lieutenant-Colonel Cynthia Colin, a Pentagon spokeswoman. It is prudent to look at the policy again, she said, "and make sure we give commanders a variety of options. Cremation is one of the options being considered."

US troops are training to combat chemical or biological attacks and are receiving protective gear in the hope of guarding against the worst effects.

The issue is controversial and fraught with emotion. Pentagon officials declined to elaborate on the substance of the review, saying only that cremation is among the options being considered "if remains pose a hazard to the health and safety of the living".

During the 1991 Gulf War, plans were reportedly in place for mass burials and cremation of troops killed by chemical or biological agents. Those plans never had to be implemented.

The review began last month. It is being conducted by the US army's mortuary affairs program - which is charged with the recovery of all service member remains - and by health and safety officials from all four branches of the military, Colonel Colin said.

Since the repatriation of remains became a political rallying point during and after the Vietnam War, the military has sought to immediately return personnel killed overseas. In the two world wars, more than 307,000 soldiers were buried in temporary cemeteries overseas. Of those, more than 47,000

were later returned to the US for interment.

Soldiers often risk their lives to retrieve the remains and personal effects of fallen comrades and bring them back to families for burial. "We want to bring the remains back, that's our goal. But we have to do it safely," Colonel Colin said.

HAARP experiments
worry members of Russian Duma

By Rick Wiles
August 15, 2002
Copyright 2002 American Freedom News

Top members of Russia's parliament have expressed concern about the US Pentagon's plans to conduct military experiments using HAARP.

Members of the State Duma's international affairs and defense committees issued a statement last Thursday in Moscow. The legislators claim the United States HAARP program is developing "a qualitatively new type of weapon."

"Under the High Frequency Active Auroral Research Program (HAARP), the U.S. is creating new integral geophysical weapons that may influence the near-Earth medium with high-frequency radio waves," the State Duma said in an appeal circulated on Thursday. "The significance of this qualitative leap could be compared to the transition from cold steel to fire arms, or from conventional weapons to nuclear weapons. This new type of weapons differs from previous types in that the near-Earth medium becomes at once an object of direct influence and its component.

The committees reported that the U.S. is planning to test three facilities of this kind.

The Alaska site of HAARP is scheduled to conduct full-scale tests beginning in early 2003. The second testing site is in Greenland and the third site is in Norway.

"When these facilities are launched into space from Norway, Alaska and Greenland, a closed contour will be created with a truly fantastic integral potential for influencing the near-Earth medium," the State Duma said.

The Russian legislators say US scientific experiments, under the HAARP program, will create weapons capable of breaking radio communication lines and equipment installed on spaceships and rockets, provoke serious accidents

in electricity networks, oil and gas pipelines, and have a negative effect on the mental health of people populating entire regions of the planet.

The Duma deputies are demanding that an international ban be put on such large-scale geophysical experiments.

The appeal, signed by 90 deputies, has been sent to President Vladimir Putin, the United Nations and other international organizations, to the parliaments and leaders of the UN member countries, to the scientific public and to mass media outlets.

Among those who signed the appeal are Tatyana Astrakhankina, Nikolai Kharitonov, Yegor Ligachev, Sergei Reshulsky, Vitaly Sevastyanov, Viktor Cherepkov, Valentin Zorkaltsev and Alexei Mitrofanov.

Background of the HAARP Project
Prepared by Rosalie Bertell, Ph.D., GNSH

Military interest in space became intense during and after World War II because of the introduction of rocket science, the companion to nuclear technology. The early versions include the buzz bomb and guided missiles. They were thought of as potential carriers of both nuclear and conventional bombs.

Rocket technology and nuclear weapon technology developed simultaneously between 1945 and 1963. During this time of intensive atmospheric nuclear testing, explosions at various levels above and below the surface of the earth were attempted. Some of the now familiar descriptions of the earth's protective atmosphere, such as the existence of the Van Allen belts, were based on information gained through stratospheric and ionospheric experimentation.

The earth's atmosphere consists of the troposphere, from sea level to about 16 km above the earth's surface; the stratosphere (which contains the ozone level) which extends from about the 16 to 48 km above the earth; and the ionosphere which extends from 48 km to over 50,000 km above the surface of the earth.

The earth's protective atmosphere or "skin" extends beyond 3,200 km above sea level to the large magnetic fields, called the Van Allen Belts, which can capture the charged particles sprayed through the cosmos by the solar and galactic winds. These belts were discovered in 1958 during the first weeks of the operation of America's first satellite, Explorer I. They appear to contain charged particles trapped in the earth's gravity and magnetic fields. Primary galactic cosmic rays enter the solar system from interstellar space, and are made up of protons with energies above 100 MeV, extending up to astronomically high energies. They make up about 100 percent of the high energy rays. Solar rays are generally of lower energy, below 20 MeV (which is still high energy in earth terms). These high energy particles are affected by the earth's magnetic field and by geomagnetic latitude (distance above or below the geomagnetic equator). The flux density of low energy protons at the top of the atmosphere is normally greater at the poles than at the equator. The density also varies with solar activity, being at a minimum when solar flares are at a minimum.

The Van Allen belts capture charged particles (protons, electrons and alpha particles) and these spiral along the magnetic force lines toward the polar regions where the force lines converge. They are reflected back and forth between the magnetic force lines near the poles. The lower Van Allen Belt is about 7700 km above the earth's surface, and the outer Van Allen

Belt is about 51,500 km above the surface. According to the Encyclopedia Britannica, the Van Allen belts are most intense along the equator, and effectively absent over the poles. They dip to 400 km over the South Atlantic Ocean, and are about 1,000 km high over the Central Pacific Ocean. In the lower Van Allen Belt, the proton intensity is about 20,000 particles with energy above 30 MeV per second per square centimeter. Electrons reach a maximum energy of 1 MeV, and their intensity has a maximum of 100 million per second per square centimeter. In the outer Belt, proton energy averages only 1 MeV. For compar-ison, most charged particles discharged in a nuclear explosion range between 0.3 and 3 MeV, while diagnostic medical X-ray has peak voltage around 0.5 MeV.

Project Argus (1958)
Between August and September 1958, the US Navy exploded three fission type nuclear bombs 480 km above the South Atlantic Ocean, in the part of the lower Van Allen Belt closest to the earth's surface. In addition, two hydrogen bombs were detonated 160 km over Johnston Island in the Pacific. The military called this "the biggest scientific experiment ever undertaken." It was designed by the US Department of Defense and the US Atomic Energy Commission, under the code name Project Argus. The purpose appears to be to assess the impact of high altitude nuclear explosions on radio transmission and radar operations because of the electromagnetic pulse (EMP), and to increase understanding of the geomagnetic field and the behavior of the charged particles in it.

This gigantic experiment created new (inner) magnetic radiation belts encompassing almost the whole earth, and injected sufficient electrons and other energetic particles into the ionosphere to cause world wide effects. The electrons traveled back and forth along magnetic force lines, causing an artificial "aurora" when striking the atmosphere near the North Pole.

The US Military planned to create a "telecommunications shield" in the ionosphere, reported in 13-20 August 1961, Keesings Historisch Archief (K.H.A.). This shield would be created "in the ionosphere at 3,000 km height, by bringing into orbit 350,000 million copper needles, each 2-4 cm long [total weight 16 kg], forming a belt 10 km thick and 40 km wide, the needles spaced about 100 m apart." This was designed to replace the ionosphere "because telecommunications are impaired by magnetic storms and solar flares." The US planned to add to the number of copper needles if the experiment proved to be successful. This plan was strongly opposed by the Intentional Union of Astronomers.

Project Starfish (1962)
On July 9, 1962, the US began a further series of experiments with the ionosphere. From their description: "one kiloton device, at a height of 60 km and one megaton and one multi-megaton, at several hundred kilometers height" (K.H.A., 29 June 1962). These tests seriously disturbed the lower Van Allen Belt, substantially altering its shape and intensity. "In this experiment the inner Van Allen Belt will be practically destroyed for a period of time; particles from the Belt will be transported to the atmosphere. It is anticipated that the earth's magnetic field will be

disturbed over long distances for several hours, preventing radio communication. The explosion in the inner radiation belt will create an artificial dome of polar light that will be visible from Los Angeles" (K.H.A. 11 May 1962). A Fijian Sailor, present at this nuclear explosion, told me that the whole sky was on fire and he thought it would be the end of the world. This was the experiment which called forth the strong protest of the Queen's Astronomer, Sir Martin Ryle in the UK.

"The ionosphere [according to the under-standing at that time] that part of the atmosphere between 65 and 80 km and 280- 320 km height, will be disrupted by mechanical forces caused by the pressure wave following the explosion. At the same time, large quantities of ionizing radiation will be released, further ionizing the gaseous components of the atmosphere at this height. This ionization effect is strengthened by the radiation from the fission products... The lower Van Allen Belt, consisting of charged particles that move along the geomagnetic field lines... will similarly be disrupted. As a result of the explosion, this field will be locally destroyed, while countless new electrons will be introduced into the lower belt" (K.H.A. 11 May 1962). "On 19 July... NASA announced that as a consequence of the high altitude nuclear test of July 9, a new radiation belt had been formed, stretching from a height of about 400 km to 1600 km; it can be seen as a temporary extension of the lower Van Allen Belt" (K.H.A. 5 August 1962).

As explained in the Encyclopedia Britannica: "... Starfish made a much wider belt [than Project Argus] that extends from low altitude out past L=3 [i.e. three earth radiuses or about 13,000 km above the surface of the earth]." Later in 1962, the USSR undertook similar planetary experiments, creating three new radiation belts between 7,000 and 13,000 km above the earth. According to the Encyclopedia, the electron fluxes in the lower Van Allen Belt have changed markedly since the 1962 high- altitude nuclear explosions by the US and USSR, never returning to their former state. According to American scientists, it could take many hundreds of years for the Van Allen Belts to destabilize at their normal levels. (Research done by: Nigel Harle, Borderland Archives, Cortenbachstraat 32, 6136 CH Sittard, Netherlands.)

SPS: Solar Power Satellite Project (1968)
In 1968 the US military proposed Solar Powered Satellites in geostationary orbit some 40,000 km above the earth, which would intercept solar radiation using solar cells on satellites and transmit it via a microwave beam to receiving antennas, called rectennas, on earth. The US Congress mandated the Department of Energy and NASA to prepare an Environmental Impact Assessment on this project, to be completed by June 1980, and costing $25 Million. This project was designed to construct 60 Solar Powered Satellites over a thirty year period at a cost between $500 and $800 thousand million (in 1968 dollars), providing 100 percent of the US energy needs in the year 2025 at a cost of $3000 per kW. At that time, the project cost was two to three times larger than the whole Department of Energy budget, and the projected cost of the electricity was well above the cost of most conventional energy sources. The rectenna sites on earth were expected to take up to 145 square

kilometers of land, and would preclude habitation by any humans, animals or even vegetation. Each Satellite was to be the size of Manhattan Island.

Saturn V Rocket (1975)
Due to a malfunction, the Saturn V Rocket burned unusually high in the atmosphere, above 300 km. This burn produced "a large ionospheric hole" (Mendillo, M. Et al., Science p. 187, 343, 1975). The disturbance reduced the total electron content more than 60% over an area 1,000 km in radius, and lasted for several hours. It prevented all telecommunications over a large area of the Atlantic Ocean. The phenomenon was apparently caused by a reaction between the exhaust gases and ionospheric oxygen ions. The reaction emitted a 6300 A airglow. Between 1975 and 1981 NASA and the US Military began to design ways to test this new phenomena through deliberate experimentation with the ionosphere.

SPS Military Implications (1978)
Early review of the Solar Powered Satellite Project began in around 1978, and I was on the review panel. Although this was proposed as an energy program, it had significant military implications. One of the most significant, first pointed out by Michael J. Ozeroff, was the possibility of developing a satellite-borne beam weapon for anti-ballistic missile (ABM) use. The satellites were to be in geosynchronous orbits, each providing an excellent vantage point from which an entire hemisphere can be surveyed continuously. It was speculated that a high-energy laser beam could function as a thermal weapon to disable or destroy enemy missiles. There was some discussion of electron weapon beams, through the use of a laser beam to preheat a path for the following electron beam.

The SPS was also described as a psychological and anti- personnel weapon, which could be directed toward an enemy. If the main microwave beam was redirected away from its rectenna, toward enemy personnel, it could use an infrared radiation wave- length (invisible) as an anti-personnel weapon. It might also be possible to transmit high enough energy to ignite combustible materials. Laser beam power relays could be made from the SPS satellite to other satellites or platforms, for example aircraft, for military purposes. One application might be a laser powered turbofan engine which would receive the laser beam directly in its combustion chamber, producing the required high temperature gas for its cruising operation. This would allow unlimited on-station cruise time. As a psychological weapon, the SPS was capable of causing general panic

The SPS would be able to transmit power to remote military operations anywhere needed on earth. The manned platform of the SPS would provide surveillance and early warning capability, and ELF linkage to submarines. It would also provide the capability of jamming enemy communications. The potential for jamming and creating communications is significant. The SPS was also capable of causing physical changes in the ionosphere

President Carter approved the SPS Project and gave it a go- ahead, in spite of the reservation which many reviewers, myself included, expressed. Fortunately, it was so expensive, exceeding the entire Department of Energy budget, that funding was denied by the Congress. I approached the United

Nations Committee on Disarmament on this project, but was told that as long as the program was called Solar Energy by the United States, it could not be considered a weapons project. The same project resurfaced in the US under President Reagan. He moved it to the much larger budget of the Department of Defense and called it Star Wars. Since this is more recent history, I will not discuss the debate which raged over this phase of the plan.

By 1978, it was apparent to the US Military that communications in a nuclear hostile environment would not be possible using traditional methods of radio and television technology (Jane's Military Communications 1978). By 1982, GTE Sylvania (Needham Heights, Massachusetts) had developed a command control electronic sub-system for the US Air Force's Ground Launch Cruise Missiles (GLCM) that would enable military commanders to monitor and control the missile prior to launch both in hostile and non-hostile environments. The system contains six radio subsystems, created with visible light using a dark beam (not visible) and is resistant to the disruptions experienced by radio and television. Dark beams contribute to the formation of energetic plasma in the atmosphere. This plasma can become visible as smog or fog. Some has a different charge than the sun's energy, and accumulates in places where the sun's energy is absent, like the polar regions in the winter. When the polar spring occurs, the sun appears and repels this plasma, contributing to holes in the ozone layer. This military system is called: Ground Wave Emergency Network (GWEN). (See The SECOMII Communication System, by Wayne Olsen, SAND 78- 0391,Sandia Laboratories, Albuquerque, New Mexico, April 1978.) This innovative emergency radio system was apparently never implemented in Europe, and exists only in North America.

Orbit Maneuvering System (1981)
Part of the plan to build the SPS space platforms was the demand for reusable space shuttles, since they could not afford to keep discarding rockets. The NASA Spacelab 3 Mission of the Space Shuttle made, in 1981, "a series of passes over a network of five ground based observatories" in order to study what happened to the ionosphere when the Shuttle injected gases into it from the Orbit Maneuvering System (OMS). They discovered that they could "induce ionospheric holes" and began to experiment with holes made in the daytime, or at night over Millstone, Connecticut, and Arecibo, Puerto Rico. They experimented with the effects of "artificially induced ionospheric depletions on very low frequency wave lengths, on equatorial plasma instabilities, and on low frequency radio astronomical observations over Roberval, Quebec, Kwajelein, in the Marshall Islands and Hobart, Tasmania" (Advanced Space Research, Vo1.8, No. 1, 1988).

Innovative Shuttle Experiments (1985)
An innovative use of the Space Shuttle to perform space physics experiments in earth orbit was launched, using the OMS injections of gases to "cause a sudden depletion in the local plasma concentration, the creation of a so called ionospheric hole." This artificially induced plasma depletion can then be used to investigate other space phenomena, such as the growth of the plasma instabilities or the modification of radio propagation paths. The 47 second OMS burn of July 29, 1985, produced the largest and most long-lived ionospheric hole to date, dumping some 830 kg of exhaust into the

ionosphere at sunset. A 6 second, 68 km OMS release above Connecticut in August 1985, produced an airglow which covered over 400,000 square km.

During the 1980's, rocket launches globally numbered about 500 to 600 a year, peaking at 1500 in 1989. There were many more during the Gulf War. The Shuttle is the largest of the solid fuel rockets, with twin 45 meter boosters. All solid fuel rockets release large amounts of hydrochloric acid in their exhaust, each Shuttle flight injecting about 75 tons of ozone destroying chlorine into the stratosphere. Those launched since 1992 inject even more ozone-destroying chlorine, about 187 tons, into the stratosphere (which contains the ozone layer).

Mighty Oaks (1986)
In April 1986, just before the Chernobyl disaster, the US had a failed hydrogen test at the Nevada Test Site called Mighty Oaks. This test, conducted far underground, consisted of a hydrogen bomb explosion in one chamber, with a leaded steel door to the chamber, two meters thick, closing within milliseconds of the blast. The door was to allow only the first radioactive beam to escape into the "control room" in which expensive instrumentation was located. The radiation was to be captured as a weapon beam. The door failed to close as quickly as planned, causing the radioactive gases and debris to fill the control room, destroying millions of dollars worth of equipment. The experiment was part of a program to develop X-ray and particle beam weapons. The radioactive releases from Mighty Oaks were vented, under a "licensed venting" and were likely responsible for many of the North American nuclear fallout reports in May 1986, which were attributed to the Chernobyl disaster.

Desert Storm (1991)
According to Defense News, April 13 - 19, 1992, the US deployed an electromagnetic pulse weapon (EMP) in Desert Storm, designed to mimic the flash of electricity from a nuclear bomb. The Sandia National Laboratory had built a 23,000 square meter laboratory on the Kirkland Air Force Base, 1989, to house the Hermes II electron beam generator capable of producing 20 Trillion Watt pulses lasting 20 billionths to 25 billionths of a second. This X-ray simulator is called a Particle Beam Fusion Accelerator. A stream of electrons hitting a metal plate can produce a pulsed X-ray or gamma ray. Hermes II had produced electron beams since 1974. These devises were apparently tested during the Gulf War, although detailed information on them is sparse.

High Frequency Active Auroral Research Program, HAARP (1993)
The HAARP Program is jointly managed by the US Air Force and the US Navy, and is based in Gakona, Alaska. It is designed to "understand, simulate and control ionospheric processes that might alter the performance of communication and surveillance systems." The HAARP system intends to beam 3.6 Gigawatts of effective radiated power of high frequency radio energy into the ionosphere in order to:

a.. Generate extremely low frequency (ELF) waves for communicating with submerged submarines
b.. Conduct geophysical probes to identify and characterize natural

ionospheric processes so that techniques can be developed to mitigate or control them
c.. Generate ionospheric lenses to focus large amounts of high frequency energy, thus providing a means of triggering ionospheric processes that potentially could be exploited for Department of Defense purposes,
d.. Electron acceleration for infrared (IR) and other optical emissions which could be used to control radio wave propagation properties
e.. Generate geomagnetic field aligned ionization to control the reflection/scattering properties of radio waves,
f.. Use oblique heating to produce effects on radio wave propagation, thus broadening the potential military applications of ionospheric enhancement technology.
Poker Flat Rocket Launch (1968 to Present)
The Poker Flat Research Range is located about 50 km North of Fairbanks, Alaska, and it was established in 1968. It is operated by the Geophysical Institute with the University of Alaska Fairbanks, under NASA contract. About 250 major rocket launches have taken place from this site, and in 1994, a 16 meter long rocket was launched to help NASA "understand chemical reactions in the atmosphere associated with global climate change." Similar experiments, but using Chemical Release Modules (CRM), have been launched from Churchill, Manitoba. In 1980, Brian Whelan's "Project Waterhole" disrupted an aurora borealis, bringing it to a temporary halt. In February 1983, the chemical released into the ionosphere caused an aurora borealis over Churchill. In March 1989, two Black Brant X's and two Nike Orion rockets were launched over Canada, releasing barium at high altitudes and creating artificial clouds. These Churchill artificial clouds were observed from as far away as Los Alamos, New Mexico.

The US Navy has also been carrying on High Power Auroral Stimulation (HIPAS) research in Alaska. Through a series of wires and a 15 meter antenna, they have beamed high intensity signals into the upper atmosphere, generating a controlled disturbance in the ionosphere. As early as 1992, the Navy talked of creating 10 kilometer long antennas in the sky to generate extremely low frequency (ELF) waves needed for communicating with submarines. Another purpose of these experiments is to study the Aurora Borealis, called by some an outdoor plasma lab for studying the principles of fusion. Shuttle flights are now able to generate auroras with an electron beam. On November 10, 1991, and aurora borealis appeared in the Texas sky for the first time ever recorded, and it was seen by people as far away as Ohio and Utah, Nebraska and Missouri. The sky contained "Christmas colors" and various scientists were quick to blame it on solar activity. However, when pressed most would admit that the ionosphere must have been weakened at the time, so that the electrically charged particle hitting the earth's atmosphere created the highly visible light called airglow. These charged particles are normally pulled northwards by the earth's magnetic forces, to the magnetic north pole. The Northern Lights, as the aurora borealis is called, normally occurs in the vortex at the pole where the energetic particles, directed by the magnetic force lines, are directed.

Conclusions
It would be rash to assume that HAARP is an isolated experiment which

would not be expanded. It is related to fifty years of intensive and increasingly destructive programs to understand and control the upper atmosphere.

It would be rash not to associate HAARP with the space laboratory construction which is separately being planned by the United States. HAARP is an integral part of a long history of space research and development of a deliberate military nature.

The military implications of combining these projects is alarming.

Basic to this project is control of communications, both disruption and reliability in hostile environments. The power wielded by such control is obvious.

The ability of the HAARP / Spacelab/ rocket combination to deliver very large amount of energy, comparable to a nuclear bomb, anywhere on earth via laser and particle beams, are frightening.

The project is likely to be "sold" to the public as a space shield against incoming weapons, or, for the more gullible, a devise for repairing the ozone layer.

I have a mint Alinco DJ-X2000 (US version) in as new condition with original manual, accessories and box (original non-smoking owner). This item retails for $499.00

I am looking for a high-end (big three) HT, dual-band with built-in TNC. This unit must be in mint condition with original accessories and box.

Please e-mail direct with offers. Thank you.

John Schneider, KB2COP

Well Tom,
I hate to tell you this BUT, remember the dog biscuit you ate the
other day with the little hard spot in it???? That was it, it hung up in
your gut and is transmitting to your brain their wishes.

YOU ARE UNDER THEIR CONTROL NOW.

If you will forward check to my address AFTER it clears I will tell
how to regain control of your self.

FWIW...I wouldn't cut your Scan Tenna yet!! Mine enjoyed excellent MilAir reception, mounted 12' above my roofline and using only 35' of RG8/U coax....from here in central MA I could hear comms all over New England plus NY and NJ...on a good day as far west as PA and as far south as the DC area. It was just a stock, unmodified Scan Tenna.

since i hate women?????

where on earth did that come from???

yes education prospects have improved only in Kabul though,but that is not
the only human right,no point educating the girls and when some guy gets
them pregnant at 16 she ends up in prison?????

Human rights and aid workers report nothing much has changed.

sorrry i put more weight on human rights and aid workers than i do military
and government officials.

Karzai was working for a US company involved in the pipeline project and
then becomes president,if thats not dirty politics i dont know what is???

so you see nothing wrong with Karzai and his former job,so you will be happy for the US to globalize the world by installing US supporters in as many countries as it can

yes the US may not want to invade and keep actual control of countries,but it certainly wants to make sure that countries politicial leaders support the US.

some of our labour governments in the past have had dirty tactics by CIA played on them.

its US imperialism,just as bad as the old european imperialism,but more subtle.

we in the UK are firmly under your thumb

or rather conservitive and new labour politicians/businesses/media and culture,we have to watch your crap films and so called comedy programmes/our kids try and speak like you,agh!!! what next

Information on the AOR ONE has been available for some time now however
it isn't available yet and we have no firm dates as to when this might
be.

The INS was aware that Malvo was here illegally but did nothing about it. He
then
killed/wounded 10 people. You really dont think deporting the assholes
wouldnt have done anything?

The INS IS at fault and the border patrol needs help. Then again, you need a
body count before any liberals will do anything about it.

Since you've decided to become the 'official' question approver for this group, why not post a real email address so people can send questions for pre-approval before posting?

The above post clearly demostrates your superior wit and ability to use sarcasm to get a point across.

It's certainly difficult for the rest of us to live up to your exacting standards, please try to forgive those that are clearly less ambitious and/or intelligent as yourself.

Thank you, thank you, thank you.

Please.....please...nobody tell the balding pate
chipmunk-cheeked Lloyd-da-toid about this website:

http://www.angelfire.com/ne/AntariiRescue/rabbi_rocky_show.html

If Lloyd sees it, he's liable to go on an INSANE rant across every
kook and conspiracy newsgroup known to man and then check into
the 3.860 Eastern Regioinal Pay-triots Website and blow up his HF
from loading into his 5/8th wave 2 meter vertical mag-mount he's
got pasted atop the rusty 4-drawer filing cabinet outside of his shack's
window that he "rescued" from the local auto-body shop's trashcan....

(come to think of it...DO NOT let any Liberty Netters get ahold of
the website either.....if Vic sees it, he's liable to have "depends
under-garments"
moments right up to next Saturday night.....Oy!!

Sort of. All you need is Real Player and Windows Media player. Both are free downloads. Install both and then go to google and type in "Live Scanner Audio". A couple clicks from the results of that search can get you live feeds from all over the world for just about any kind of scanning you want to monitor.

Try it - it's fun! It also comes in handy if there's a major breaking news story on CNN or whatever and you know the link to the live scanner in that area...

from your idiotic statement that the condition of women hasnt
improved. since schooling IS an improvement, you just dont value the
idea women should be educated.

You connect your cables. All is well. You select clone mode on both units and initiate the transfer. The units start talking. Love is in the air. "Doctor! you've done it" you exclaim and then it happens. They get up to the MDL command, and then your 780 says BC780XLT (an instant mood killer) and your 785 simply says ERR. (which is Unidenese for What the F--K?)

But then, what did you expect would happen when you tried to clone a 1000 channel scanner with a 500 channel one?????? Good God man!

What is your deffinition of a newsgroup? The main point of a newsgroup is to pass along learned information. Everything can be found via a search engine, but, and forgive me for taking the shorter road, it is a lot more easy to just ask.

Well here's the header from from speech at a Convention of hypnotists in Vegas some years back. Any wonder rock 'n rollers & heavy metal bands concentrate on low freqs during their performances?

THE BATTLE FOR YOUR MIND

Persuasion & Brainwashing Techniques Being Used Today
by
Dick Sutphen

SUMMARY OF CONTENTS

* The birth of Brainwashing/Conversion in Christian Revivalism in 1735.

* The Pavlovian explanation of the three brain phases.
* Born again preachers: Step-by-step; how they conduct a revival and the
expected physiological results.
* The "voice roll" technique used by preachers, lawyers, and hypnotists.
* New trance-inducing churches.
* The six steps to conversion.
* The decognition process.
* Thought-stopping techniques.
* The "sell it by zealot" technique.
* True believers and mass movements.
* Persuasion techniques:
"Yes set," "Imbedded Commands," "Shock and Confusion," and the
"Interspersal Technique."
* Subliminal Programming
* Misuse of Programming
* Possession of Professional Observers
* Vibrato and ELF waves.
* Inducing trance with vibrational sound.
* The art of "possession" by charismatic effect.
* Non-detectable neurophone programming.
* The medium for mass takeover.
* The "only hope" technique for non-conversion.

FOREWORD

Hello, I'm Dick Sutphen and this is an expanded version of a talk I delivered at the World Congress of Professional Hypnotists Convention in Las Vegas, Nevada. Although the material carries a copyright to protect it from unlawful duplication for sale by for-profit enterprises, I

invite individuals to make copies and give them to friends and anyone else in a position to communicate this information.

...Three distinct and progressive states of "transmarginal inhibition" were identified by Pavlov. The first is the Equivalent Phase, in which the brain gives the same response to both strong and weak stimulii. The second is the Paradoxical Phase, in which the brain responds more actively to weak stimulii than to strong. And the third is the Ultra-Paradoxical Phase, in which conditioned responses and behavior patterns turn from positive to negative or from negative to positive at the direction of the manipulator.

...Most likely, repetitive music will be played as the people enter and seat themselves. This repetitive beat, ideally ranging from 45 to 72 beats per minute (a rhythm close to the beat of the human heart), is very hypnotic and can generate an eyes-open altered state of consciousness in a very high percentage of people. And, once you are in this alpha state, you are at least 25 times more suggestible than you would be in full beta consciousness.

A "voice roll" is a patterned, paced style used by hypnotists, when inducing a trance. It is also used by many lawyers, several of whom are highly trained hypnotists, when they desire to entrench a point firmly in the minds of the jurors.A voice roll can sound as if the speaker were talking to the beat of a metronome or it may sound as though he were emphasizing every word in a monotonous, patterned style. The words will usually be delivered at the rate of 45 to 60 beats per minute, maximizing the hypnotic effect.

Before I go on, let's go back to the six tip-offs to conversion. I want to mention the United States Government and military boot camp. The Marine Corps talks about breaking men down before "rebuilding" them as new men--as marines! Well, that is exactly what they do, the same way a cult breaks its people down and rebuilds them as happy flower sellers on your local street corner. Every one of the six conversion techniques are used in boot camp. Considering the needs of the military, I'm not making a judgment as to whether that is good or bad. IT IS A FACT that the men are effectively brainwashed. Those who won't submit must be discharged or spend much of their time in the brig.

2424. Using a scope to crack DTMF tones when sound quality is poor

Newsgroup: rec.radio.scanner
Date: 2003-02-11 01:40:11 UTC
From: "Ian W. Douglas" <idouglas@calcna.ab.ca>
Message-ID: <Pine.A41.4.05.10302101839350.42932-100000@srv1.calcna.ab.ca>
Source record: 36609

One or two times I was successful in decoding DTMF tones by ear, but this method is extremely difficult.

I have been trying to use an oscilloscope (the single beam, non storage type) to crack DTMF tones, but of course since a DTMF tone will create a composite waveform it is next to impossible to read the signature of a given DTMF tone (e.g. 1). I can do this when the sound quality is good, but when background noise, slight distortion, etc. are present, then I cannot compare the poor quality tones to the high quality ones by this method. I do not have a spectrum analyzer, nor the means to get one. Since DTMF tones are "split" along roughly 1000 hz, I was thinking that if I had a low pass filter (with a "ceiling" of 1000 Hz) to screen out the upper tones and could switch over to a high pass filter (with a "floor" of 1000 Hz) to screen out the lower tones, then I could deduce the digits, etc. being dialled when the sound quality of the tones is poor (a standard DTMF decoder box will not work in such an environment). Of course, I would have to play the tones several times and use charts, etc. to deduce them, as well as read what the different frequencies are on the scope. Does anyone out there have plans or advice on such a set of filters? I am thinking of connecting the input to the scope in parallel with the speaker of a tape player with the tones recorded on it. The filters would only act on the scope input channel, so I could hear the "real" tones being generated on the speaker, with the filtered versions being displayed on the scope. One problem with high- and low-pass filters is that there is not a very clean cutoff point between the accepted and rejected frequencies. The filters needed for this project would have to take this into account, or get around it.

Regards,

Ian Douglas

But it WOULD make sense for someone to write software that was able to read the 780, save the files, then import the 50 channels per bank into the first 50 channels of each corresponding bank on the 785.

It would save some people a lot of time.

George

2429. Wisconsin Police switched to 12 codes

Newsgroup: rec.radio.scanner
Date: 2003-02-11 03:29:02 UTC
From: scotter59@yahoo.com
Message-ID: <24d82203.0302101929.235f4562@posting.google.com>
Source record: 36611

Where is a good source for finding these newer codes?
I see a posting for Oregon 12 codes but they seem to
be different then my local police are using?

I like to hear what is going on and more and more they
are talking less and using more code.

Thanks in advance,

Scott in Wisconsin

Why not head down to the local radio shack and get a decoder chip? That coupled with a few external components will tell you exactly what the tone is.

"Ian W. Douglas" <idouglas@calcna.ab.ca> wrote in message news:Pine.A41.4.05.10302101839350.42932-100000@srv1.calcna.ab.ca...

the INS is at fault, not the border patrol. your shotgun approach to
the problem is the equivalent of throwing money at it and hoping for
results, your hysterical shrieking notwithstanding.

What is it that you are trying to hack into?
Voice mailboxes? Credit card info?
PBX?

These are the few among MANY of the reasons
a person would want to decode DTMF (aka
dial tones) on a phone...

Why must people automatically assume that anyone who asks a question on a newsgroup hasn't first searched for the answer? And even if they haven't, what's the harm in asking?

Tom

2440. Trade for High end scanner

Newsgroup: rec.radio.scanner

Yaesu FT 757 GX
Pyramid PS 36K power supply
President Lincoln
Astatic 575 power mic
Shakespear army stick
Shakespear pogo stick
2- stainless steel whips
100 feet of LMR 400 coax
RG 8X coax, unsure how much i have, but it all goes
Radio shack amplified speaker
Lightning surge protector

I would like to trade for a high end scanner. Everything listed goes
as a package.

Everything works great, the lincoln is only a few months old, bought it
brand new. The Yaesu was checked out by yaesu last summer. As per usual
the buyer pays the shipping, I am not sure how I would ship the antennas.

Any questions, please feel free to email me @ freebird@cableone.net

Thanx for checking out my post; Charles

Dr. Fred Hambrecht Sr <v4giprrqoihp61@corp.supernews.com>...

^ Make sure you are in AM mode if you want to hear the bloopy-it-de-bloops.

Thanks. I had forgotten that 300MHz is AM and I didn't notice that my scanner automatically set AM mode. Unfortunately I still don't get any bloopy-it-de-bloops in either mode. But now that I can assume UHF (~300MHz) I can do a more careful frequency search.

Frank

Stop thinking about the scope and start thinking about an audio
spectrum analyzer. You can get software for things like that for your
PC. Take the line out jack from the scanner and plug it in to the
line input jack on your computer. The tones, if they can be read out
of the noise at all, should be visible as lines on the spectrum
analyzer. To help you identify these lines, I suggest finding a
program with a "waterfall" mode.

Source record: 36635

The really funny part about this guy is that he might already have the equipment he needs to figure them out. It aint rocket science. Most decent radios have a function to report the tone. Of course posting such a request on the internet guarantees that if anyone does interfere with emergency communication in his area they would come looking for him first. That hotmail/google anonynimity won't last too long. If any of you are real bored feel free to track this guy down or at least what area he is posting from.

2453. Radio Shack PRO 34 & PRO 43 question.

Newsgroup: rec.radio.scanner
Date: 2003-02-11 13:18:50 UTC
From: texmexsu1@yahoo.com
Message-ID: <da038a29.0302110518.74c45086@posting.google.com>
Source record: 36633

After cleaning the closet I found our two old R/S scanners the PRO 34 & 43. I noticed that one of them needed a new battery holder so I took them to a local Radio Shack to get one. When I asked an employee he looked at them both, went over and talked to another employee and came back & asked if I was selling them. I told him that I was thinking about it because we don't use them but could use a new marine band handheld. He said to let know as he was interested in purchasing them both but they had no marine band radios to trade. He didn't care about the boxes or instructions, just the radios. When I asked what interest he could have in these older units he said something about the date codes and pre-ban. He didn't offer a price but when I mentioned that the radio I wanted to buy was about $200.00 he didn't blink.
I figured that someone here may know if that's about what they are worth.

Thanks

2454. discone higher gain

Actually they have -3dbd "gain"

Richard

No, no way to squueze gain out of a discone, unless you use a mast head pre
am, and then you need a damh good RX to be able to cope with such
punishment.

Time to go for a) a small yagi or better still log periodic or b)make uop
quarter wave whips and use a mag mount to connect them - they work far far
better than a discone andhave @ 20mhz band width. I have a 1/2 wave dipole
cut for 27 mhz which works fine between 25-32mhz

A quarter-wave vertical and a dipole are two completely different things, so
what is it exactly that you're hooking up to the mag mount?

2466. Re: discone higher gain

Newsgroup: rec.radio.scanner
Date: 2003-02-11 18:58:13 UTC
From: Richard <translations@qdnet.pl>

Source record: 36649

They are two separate aerials. I have a dipole cut for 27 mhz. The second I have is a mag mount on a square meter sheet of metal and that works great for any frequency above 144mhz - at least on TX I have a better SWR than a commercial aerial for the same band.

1/4 wave verticals are know for broadband width

"Is there such a thing as internet scanning without a physical scanner."

Yes.

"I mean is there free software, I can install on my computer that substitutes for a genuine scanner that I can listen to on my computer speakers?"

No. But you can listen to one over the internet using free software, i.e. close enough solution for most people.

Source record: 36658

Hey all

For the past three or four years I got by with my pawn-shop bought Uniden scanner. I can't remember the model number but it was a mobile scanner (compact). It looks very similar to the Bearcat 350. It finally wore out last month and I've been using my BC60 XLT to keep up with local police/fire. But I really miss being able to scan multiple frequencies and bands. I don't mind tossing down $200-$300 since this is one of my all time favorite hobbies, but I have no idea what is good for that price. I mainly listen to local fire and police, but I would enjoy surfing around with other bands. What do you guys reccommend?

I need to replace the backup battery in my 9600, has anyone here done
this ?
What battery does it take, any problems doing it ?

Thanks,
Bob

Nope.

I think it's long overdue.

I think if we had done the job right and flattened SoDamn Insane when we had the chance, the cowards that flew planes into the WTC would have picked someone elses buildings to blow up.

We, like the UN, are viewed by the arab world as a bunch of weaklings who don't have the guts to stand up to them and don't have the faith in Allah to prevail. As long as we buy their oil, then they can do as they please - that is what they think. ALL of them. Even (and ESPECIALLY) the Saudis.

Time to prove to them how full of BS they are. I say bring on ww3. The global population (by the looks of this thread) needs some thinning desperately. And I would certainly enjoy the entertainment on the news. And just think about all the great things we'll do for the environment once we tell them what they can do with their filthy oil... etc. etc.

Selfish? Maybe. But at least I'm honest. Many more people feel just like me but don't have the guts to tell the truth. Pathetic.

2484. Uniden BC80XLT Track Scanner?

Newsgroup: rec.radio.scanner
Date: 2003-02-12 01:25:03 UTC
From: Chad Clark <chadrclark@REMOVETHISlightbound.com>
Message-ID: <Rnh2a.107$S46.59009@news.uswest.net>
Source record: 36667

Hello,

The Uniden BC80XLT scanners are available at my local pawn shop for a pretty low price--around $50 or so. I have a more expensive scanner at home with more features, but I was wondering if this would be a decent enough scanner to take to the track for NASCAR races. That's basically all I would want to do with it since my home scanner takes care of everything else. I've never taken a scanner to the track, so I'd appreciate any comments from people that have used the BC80XLT for this purpose.

Thanks,

Chad

Dr. Fred Hambrecht Sr <v4iaae3vgfomc8@corp.supernews.com>...

^ You aroused my curiosity ...

I found the device in the street while riding my bike (I don't have a car)
and pushed the buttons for a couple of days during my morning ride in an
attempt to find it's (now previous) owner. Curiosity has forced me to learn
more about this device and to see if I can make use of it in some way.

^ ...so I pulled out the door opener for my wife's
^ Lincoln. The FCC site showed it to operate on 315 MHz.

That matches a frequency list I found during my search:

260 MHz
310 MHz
315 MHz
433 MHz

^ I am able to hear it just fine.

I get nothing from mine, which may be why it was left in the street.

^ Next I plan to write a bit of software to decode it.

Signal the computer to go online and check for mail? Start the coffee pot?

Frank

I use an RT Systems CT29A cable, sold for the VR-500.
If you want to use my free tk120 software, the CT29A is the cable
to get.

RT Systems sales staff may be contacted at telephone 678-354-3500
or sales@cloningsoftware.com. (Note: I am not affiliated with RT Systems).

See: http://rtsars.com

I don't think the PRO-92/93/95 cables will work with tk120.

See http://parnass.com to download the software.

Antenna Specialists Co. used to make just such an item. I do not know if it is still available. I have one and used it in exactly the same manner that you described. It worked well. Found it at a ham fest years ago.

Good Luck,

Gene

I was in contact with Jason some months ago, I got the original source code, and a few modifications of my own, to control a Winradio receiver, and a CI-V compatible receiver (just like Optocom, and certains Icom IC-Rxx)

I can make some other modifications for you guys, or give the source code (with Jason autorization) for you to make the mods.

By the way, I have Pocflex/Winflex source too. Sometime ago, there was a hard fight between JP and other programmers about the recycling of source code from Winflex/Pocflex to PDW. IMHO, JP shuts down his website to avoid more discussions.

Hello all. I've been surfing around for a scanner. It's been a long time and I've decided to upgrade from my old bearcat 150. Just before the new year I was waiting for the BC785D to hit the shelves. I understand that it's out now. But before I run off and by it, I thought I might ask you guys if that's still the top scanner? What is the best scanner out right now? Thanx.

-Tim

> I can make some other modifications for you guys, or give the source
> code (with Jason autorization) for you to make the mods.

As I told earlier there are some things missing regarding group-pages.
Most countries use only personal messages and the groupcalls are
only for info-services and things like that.

Here in Holland a new FLEX network is being build for public safety,
and that network will use mostly groupcalls. In that way you would
only see the goup codes and not the codes of the pagers which are
actually paged. The displaying of these codes is a little modification,
but if you want the message te be on the same line as te codes
within a group call, that'll be a bit more work.

For me, that is the main issue, but in an other message I also told
that I'd like to change some things regarding te filters, because I
think there are some options missing.

Bye, Peter Hunt.

I'm sure that varies a lot, depending on makes and models. I have a
"Speedy" (Italian make). It transmits at about 433.9 MHz. *Very* short
bursts.

Imagine a spectrum analyzer output where the amplitude axis is instead
represented as color or intensity. Imagine that with each "sweep" one
of the sweep lines is scrolled off the top of the window and a new
sweep line takes its place.

These sorts of displays are very useful for digging slow, coherent
audio tones out of a noise floor. There are lots of programs of this
sort available free on the internet. Just plug in "audio spectrum
analyzer" and "waterfall" in to Google and see what comes out.

Sure would be great to go on vacation and dial my number back home and listen to whats going on around the home QTH.

Does anyone know if this can be done with any of the software out there or better yet a standalone device that could be connected directly to the scanner and your homes phone lines.

Hi,
I see that many scanners out in the market uses only NFM,WFM,AM modulation.
Seems that only the really expensive ones contain SSB etc.
Does that mean that SSB etc modulation are for like the people who can
afford it? Or are they just less important modes?

Thanks.

2525. Re: VR-120 delay

Choose BUSY in the Memory Scan Resume field.
It is located in tk120's Memory Bank window.

While operating your VR-120, the Memory Scan Resume
setting is changed if you press the SCAN key while
the radio is already scanning.

When you press the SCAN key while scanning,
this changes the scan resume setting to Busy, Hold,
or Pause. You can see the icons change on the LCD
display.

Tom,

Somewhat outside of London is JAVIATION, a fantastic UK radio dealer.
Jonathan there is a pleasure to deal with.

I will be travelling to Londoan and Paris next week as well, but will not
have the time to check in and see Jonathan, although he advises that his
shop is not far from London.

If you get the time, check him out, www.javiation.com
e-mail him and I am sure he will give you directions.

Most scanners that have SSB are usually wideband radios that cover the HF
spectrum as well as VHF/UHF. HF is where SSB is normally used.

I do live right by an airport, and right by a river that is monitored for flood control. It has kind of an interesting sound, I swear I've heard it before on other frequencies.

Thanks!

I don't know if it would be a good one to take to the track, but instead of paying $50 for a used one at the pawn shop, go to uniden.com and get a factory refurbished "Like New" one for $48. I think its worth it.

Hi Burr. I can answer some of your questions for you. I recently purchased the BC250D + the digital card. Got mine at Advanced Specialties on the web for $671.00, both shipped. That seemed to be the best deal I found out of about 5 different dealers. Not sure if thats still the case, now that its been a few weeks ago.

You will need the digital (Apco 25) card if you plan on monitoring any Apco 25 digital systems in your area (the scanner will trunktrack conventional analog systems without the card). Without it, you will only hear data buzz on the frequencies that are active. One concern that you will have with this scanner, will be knowing weather or not the system(s) you want to monitor, use a 3600 baud control channel or a 9600 baud control channel. The BC250D WILL NOT trunktrack a 9600 baud cc. You can still listen to that kind of system the conventional scanning method, just no trunktracking. Another concern is if anything on those system(s) are encrypted. This scanner WILL NOT decode encrypted transmissions.

So far, I am quite pleased with the scanner. The battery pack goes fast, so having a second or third on hand might be in order.

Good Luck,

Chris

OK, I am very new to the hobby. I have owned a Uniden bc 150 for about 3 years. I never had to make these type of settings on that scanner.

How do I know if its FM or AM...what mode should I choose. Nothing around here I am trying to listen to is trunked because I followed it on my not trunked scanner before...but it seems I am not receiving some channels I have programmed in my new PRO-93. So can somebody please explain how I know what mode each frequency is?

Thank you

PROOF????? That's the most stupid thing I have read in a long time.

Billions of watts??? where does all this energy come from. Most entire
generating plants are rated at mega watts. So your talking the combined
output of many large generating stations to do this----- laughable.
You conspriacy nuts kill me, stick around you're funny.

Jeff

Not to lend credibility to the claim itself, but "billions of watts" of RF is not so far fetched. For starters, power plants actually, although measured in megawatts, have output in the thousands to millions of megawatts. A single large mall at Christmastime can actually be using more than a gigawatt of electricity, and many single UHF TV stations use over a megawatt just at their transmitter sites (and in many cases, there are several of these on a site). The other reason that this is not far-fetched is that antenna gain is added into the equation. From what I have seen of the antenna array at HAARP, it could conceivably have a forward gain of over 40dB, which would mean that for a gigawatt output, they would only need 10 megawatts input. Not nearly impossible to pull off at HF frequencies with modern MOSFETs..

2543. HELPwhats happen to police calls. have not used my scanner 10yrs???

Newsgroup: rec.radio.scanner
Date: 2003-02-13 00:31:58 UTC
From: thomas k <thekeep@comcast.net>
Message-ID: <3E4AE77E.30401@comcast.net>
Source record: 36726

I found my old scanner in the basement , put batteries in it and tried to get my local police calls. I could not get any. I called one of the local shops and they say that scanners will not pick up police calls any more. What's going on

HELP
tom

You should do MORE research. Just because you do not have
all the facts does not make someone ELSE nuts...

See

Electric prime power
will be obtained from six, 2500 kW generators, each driven by a
3600 hp diesel engine.

http://www.crystalinks.com/haarp3.html

Building the HAARP transmitter requires cutting spruce forest and filling
wetlands. Its six 3,600-horsepower diesel generators would burn 95 tons of
diesel fuel per day, producing over seven tons of air pollution. The
project's environmental-impact statement notes that the site "lies within
the Copper River Basin, which is one of Alaska's more important migration
corridors" for birds, which could be fried by flying through HAARP's
10-megahertz beams. Swans, owls and ducks could also crash into its maze of
antennas.

Also, see the PATENT for the HAARP project at:
http://www.totse.com/en/politics/us_military/haarppat.html

Our founding fathers here in the US designed the government to be a "constitutional republic" Not a democracy! Unfortunely, the values that our forefathers held have been thrown out in the name of "national security" Anyone who can think outside the box and doesen't relay completely on CNN and other mainstream sources, know the government can't protect you. CNN tries to make like everyone is safe and be happy.

Do your own research

From: "Dave H. KC5MTC" <nospam@nospam.com>
Message-ID: <gc1m4vgjuj03ju9260ou0tqc1vtmc66q73@4ax.com>
Source record: 36736

Greets all,

I was wondering if anyone has checked out or had any up close experience with the recent Bearcat BC250D digital scanner. I was checking out a few web pages, reading up on that specs and it sounds promising! I'm considering adding it to my existing fleet of HRs, a pro-37, AR8200M3 and pro-94 trunking. Has anyone bought/used the 250D? And also, if so, is anyone aware of any specific mods for this HR which may make it more "susceptible" to extra frequencies? Any help much appreciated.

DH

Hey Chris, I'm not sure, but I think what might be really exciting is that Uniden will more than likely continue to release upgrades for the digital card. Eventually (hopefully) they will sell a card capable of tracking a 9600 baud cc too. Like a computer, it will at least be nice to have a scanner that you can just plug different cards into and get it to do even more things!

About the encryption thing, you are definitely right about that. I'm not too sure how it all works. Are there any services using encryption currently? I was wondering about the legal aspects of it. From what I've read, I understand the government is pushing real hard NOT to allow for encryption for general purposes or private parties (unless it is them, of course).

The biggest thing is probably that everyone has gone to 800MHz trunked systems. How high (in frequency) does your scanner go, and what kind is it? I'd be willing to bet you probably had a bunch of VHF freqs programmed in, like in the 150-160 range right? :) If your scanner covers the 800 band, you can still scan most channels (even trunked systems) but if the trunked system you're scanning has a lot of agencies using it, it's a royal pain in the rear end to follow any reasonable facsimile of a conversation if you don't have a trunk tracking scanner.

Hey Tim, if you're looking for an awesome handheld, I would have to say I love my AR8200 MarkIII the best. All modes of reception and a total range of 100KHz to 3Ghz continuous (unblocked 800 versions available). Great reception and easy to use.

The 800 cell band used to be a bit interesting sometimes (in the past before 1994) but now most cell sites no longer re-transmit the audio uplinked from the phone (at least that's what someone told me). So you'd be hearing mostly one sided conversations. If you thought cellular was boring before....

If you wanted to hear both sides you'd have to tune to the phone side of the freq pair and have one very, very good antenna about a hundred feet high. But if a person were hypothetically still listening to cell (no one does this anymore) it would make more sense. You'd get the locals. After all, who really wants to hear about someone's life 20 miles away? :)

Not a chance of a mall using a gigawatt of electricity. I used to work in
a big electric foundry. When we had a melt they used 3 electrodes a foot in diameter
at 100 volts at 168,000 amps per phase. That comes out to16.8 million watts per phase
times pi or 3.141 for 3 phase, comes out to 52.768 megawatts total. If our melt wasnt
done in 20 minutes or less the power company (large) that supplied the a.c. cut the
power cause they claimed their voltage would start to drop. 52.768 megawatts is one
hell of a lot less than a gigawatt. Thier aint no mall using a gigawatt of power. The
foundry's
electric bill was on the order of 2-3 million dollars a month. And there are few generating
stations
in the US that are rated at millions of megawatts. Many at thousands of megawatts.
And a lot of them are rated at less than that.
==========

and many single UHF TV stations use over a
> megawatt just at their transmitter sites (and in many cases, there are
==========
I dont know of any tv stations using this kind of power. If they are using millions
of watts they must be using incredibly inefficient equipment. Ive seen tv stations
transmitting kilowatts but never in megawatts. Especially since VHF and UHF is
for the most part line of site type transmission, using that much power would be
overkill.
==========

Antenna gain is a whole different creature. The whole premise of using
this to "shoot" down the shuttle is absurd. And since this takes place in Alaska
I believe,,, the whole fricking state doesnt use that much power. And where would it
come from? To my knowledge there are no really large generating plants or nuke
plants in Alaska.

KPDX Ch. 49 in Portland, Or puts out a 5.5 megawatt signal. KWBP Ch. 32 puts out I believe 3.5 megawatts. I don't know how much antenna gain these stations have, but I'm sure that the basic transmitter for each draws on the order of a megawatt, maybe higher, what with the high level video modulation and all the peripheral equipment at the site. Remember, a transmitter site isn't just the transmitter, it's also the STL, processing, air conditioning, metering, etc., etc., which all adds up. As far as I know, the highest power a VHF channel can use is on the order of 300 KW.. I'm not certain of it, but could look it up in the FCC database. Now consider that many large cities have four of five of these UHF flamethrowers these days, and you get quite a lot of power usage. The Portland area has 22 (1.75 MW), 27 (IIRC, 950 KW), 32, 49. This along with the VHF and HDTV stuff.. not sure where the HDTV channels are, or their power output.. the VHF's are 2, 6, 8, 10, 12. There are also a few LPTV UHF'ers and one LPTV VHF in the area. And the power those all together pull out of the grid pales in comparison to the something like 1,500,000 homes in the tri-county area.

Unfortunately, the trunk tracking firmware is built into the scanner,
not the card. All that the card does is decode APCO P-25 digital
signals. The card has nothing to do with the trunk tracking feature at
all. 9600 baud trunking will require either a new scanner, or less
likely, a hardware/firmware upgrade.

Decoding any type of encryption is illegal. And yes, there are some
systems using encryption.

Typically a UHFis limited to 5.0 MegaWatt, mostly this is done in
antenna gain, a typical UHF transmitter is a 60 KW, sometimes a 120 KW.

Hi Dave. I am sure you are correct about the future upgrades for the digi cards. Like any other piece of electronics, the initial offering has is shortcomings that need to be fixed/upgraded. I knew that when I bought it, but I was getting tired of not being able to listen to 80% of the public safety goings on in my area !!

As for encryption, each department manages its system differently. Any of them have the right to utilize total encryption. However, I truly believe that the only talkgroups that might be encrypted, would be sensitive surveillance, narcotics operations, SWAT, and the like. The day-to-day police, fire and EMS transmissions should be in the clear. I'm sure there are exceptions, but its not the rule (???).

Chris

Thanks for that info. I was wondering weather the scanner or the card would have to be changed, in order to allow it to hear 9600 baud.

Florida CAP (combat air patrol) is now active. I haven't caught what area the CAP is covering as it usually over the Orlando, FL are. However I think today is over the Jacksonville area because of the President coming to Mayport NAS today.

To listen live: http://www.MilAirComms.com

Thanks
George

2581. "High-End" Scanners for Sale!

Newsgroup: rec.radio.scanner
Date: 2003-02-13 15:30:38 UTC
From: klarrg@aol.com
Message-ID: <20030213103038.20685.00000246@mb-fb.aol.com>
Source record: 36563

SCANNERS FOR SALE! SCANNERS FOR SALE!!! SCANNERS FOR SALE!!!

1.)...I have a MINT CONDITION AOR AR-2002 scanner available for sale. Radio is pristine in both appearance and functionality with "surveillance-grade" reception.Covers 25-1300 Mhz (less 550-800 Mhz)but includes cellular phone bands: mil-air and civil-air bands, and even FM broadcast band). "Full" 800 Mhz reception: no "blocks".Colorful segmented LED signal-strength meter..Selectable modes (FM, WFM, AM)and search steps (5, 12.5, 25). VFO tuning knob and LCD display. Radio looks nearly identical to the AOR AR-3000 base/mobile unit and can be used as either mobile (mobile hardware NOT included)or BASE...20 programmable memories plus search and priority features.No BOX or MANUAL (if I can find manual, will include but NO LUCK SO FAR...).Operation is common as to AOR scanners, tho'... Purchase will include radio:power supply;, and back of set antenna.Approx,. 8 CPS scan speed.Great audio: works superbly.Outstanding sensitivity......$260 DELIVERED via USPS parcel post..

2.)...I have a BRAND-NEW Commtel base scanner, model COM-225 available for sale. This is a base scanner made by GRE for the European market and is also sold under the model designation "ALBRECHT AE-100T". It is a 500 channel unit capable of UNINTERRUPTED coverage from 25-1300 Mhz CONTINUOUS (no gaps..includes cell range and the usually "deleted" 520-760 Mhz range as well.).It resembles a cross between the PRO-2035/2042 and a PRO-2040.The unit has a VFO dial like the PRO-2042 and a large, yellow/orange backlit LCD display.Scan speed is a very respectable 40 CPS.Fixed search steps depending on range in increments of 5, 12.5, 25, and 50 khz. Receives FM broadcast, AM civil AND MILITARY airbands.Radio has NEVER BEEN USED but was PROFESSIONALLY converted to USA 110VAC (from UK 220VAC)using GRE parts, so no power converters, etc., required..plug-n'-play ! Good, LOUD volume and EXCELLENT sensitivity.A TRUE collector's item or, an outstanding main scanner for the novice or experienced scanner user !Includes all original packing, manual, aerial, and is in PERFECT , UNUSED condition both physically AND electronically. Selling for $265 plus $13 fully-insured, excellently-packed shipping with tracking via common carrier.

Sorry, NO TRADES or "offers" needed.Pics not available as P/C scanner "died" recently...pics can be found using browser on your P/C.. Payment by MONEY ORDER ONLY expected within 7 days of sale.All serious replies answered.Likely the only one in the USA ! Your chance to own a true one-of-a-kind radio , PLUS...you don't have to RISK trying to IMPORT it!)<: ! No sales outside USA, Email me with ???'s: all serious replies answered. THANK YOU !

Hey Chris. Do you mind if I ask the general area in which you live? I'm in the SW Florida area. As of yet, the systems around here are still mostly analog, the operative word being 'YET.' But I know that everything will soon be digital. Seems to be the next logical evolution of radio. Even car radio receivers will soon all be digital I'm sure. But I don't want to wait around for everything to GET digital before I have a scanner capable of receiving it.

That sounds reasonable to me. But it seems like the temptation would be strong. After all, if encryption is available and relatively inexpensive, even for the most trivial of organizations utilizing radio, then why not?

Ok, on to the part that no one wants to talk about; the 800 cell band. We all know that no one here listens to the 800 cell band because it's illegal and we just don't do it. But for TEST purposes, one of us may need to check or analyze our own cellular phone for malfunctions and proper operation. Both my AOR and Pro-37 will receive analog cell (but I keep it blocked since you're not suppose to receive that). But does the digital cell network use the APCO-25 digital system? In other words if I wanted to check my OWN digital phone for proper operation, will I be able to receive it with the BC250D?

Ahem! While the dB gains are achievable, they are in reference to either an isotropic source or a dipole.

It simply means that the 10 megawatts, instead of being spread all over the place is sent in a narrow beam. It is still 10 megawatts.

Stated another way, it would take a 40dB increase in power to provide the same signal at a specific point if the source were a dipole.

Madam, you are quoting ERP, not actual power. It is easy to bandy about Gigawatt numbers, not as easily achieved.

I used to live in a little town (about 10 years ago) where the police were operating on the VHF 150-160 range. Most of their communication were normal, straghtforward analog. But every now and then one of the guys would say "go to secure mode." After that, you could tell when they were keying their mics, but all you could hear when they did was a somewhat faint but very noticable high pitch audio tone whenever they were talking. The audio tone was probably around 10-15Khz. I did not hear any digital transmission noise (like what you would hear from a dial-up modem). I tried scanning the closest adjacent frequencies and the signal seemed to drop of rather quick from center. At first I thought it might have been some kind of spread spectrum with the center frequency acting as some sort of cc, but the tone was, as far as I can tell, a pure sine wave, with no information or modulation in and of itself. So I still have no clue what this modulation scheme was. Has anyone ever come across this?

I have a Radio Shack scanner model PRO-2036 for sale.
This is a 200 channel programmable scanner.It covers:
29-50 MHz 50-54 MHz 108-136.975 MHz 137-144 MHZ 144-148 MHz 148-174 MHz 216-400 MHz 400-512 MHz
806-823.9875 MHz 849.0125-868.9875 MHz and 894.0125-956 MHz.
Two speed hyperscan up to 100 channels per second.
Auto program,auto record,auto sorting,auto weather and more.The radio is in excellent condition and
comes in the original box with manual and power supply.
Asking $ 75.00 + $ 15.00 shipping and insurance.Shipped to the lower 48 only.

Regards
Bob Stamper

2596. RS Pro-2036 Scanner modification question

Newsgroup: rec.radio.scanner
Date: 2003-02-13 19:10:51 UTC
From: Dave Schmidt <n9nlu@NO_SPAM_charter.net>
Message-ID: <v4nrfuh2h51ed8@corp.supernews.com>
Source record: 36580

Hello,

Heres a question ... I'm eyeballing a scanner - a pro-2036. Yes Bob ... your scanner..... However, I want to listen to Mil Air freqs, one popular one around here is in the 138Mhz range in AM mode. The Pro-2036 and many other scanners stop the AM mode at 136Mhz and automaticlly switch mode to FM

My question:

Has anyone modded a scanner to toggle the RX mode (AM / FM) when the scanner automaticly selects the mode? If so - how was it done?

Thanks

Dave

What no conspiracy theorist has ever been able to explain is how a few microvolts of RF coming from up there in Alaska can influence people's thoughts or moods. We all know that even a station putting out megawatts thousands of miles away will produce only microvolts in an antenna. I would think that my own ham station transmitting 100 watts would produce more of an effect than that, due to the near-field RF. And yet, I don't feel any different when I'm on the air.

Geez Bob, lighten up. If Bruce was given an answer, then he probably would have said Thank You. I'm familiar with the tk-120 software that Bob Parnass has created and, I'm pretty sure, it has nothing at all to do with the question asked. In fact, he didn't even mention what software he was using.

Anyway, to actually try and answer you question.....While scanning, you can put the 120 into 3 different modes by pressing the scan button; Pause, Busy, Hold. Pause stops for 5 seconds then continues, no matter what. Busy holds until the carrier has dropped for 2 seconds, then moves on. Hold stays there indefinitely. There's also programmable menu item 5 that sets the "delay time for scanning" but that might be for the Pause mode. I've never tried it.

Re-read your manual on scanning so you know what scan mode you're in by looking at the icons (missing, steady, or blinking). If you don't have a manual, you can DL one here; http://www.javiation.co.uk/manuals/vr-120.pdf I usually run mine in Busy (2 sec carrier drop) until I find something good, then I'll switch to Hold mode or stop scanning all together by going back to VCO mode.

Hope this helps, No thanks are necessary.....

Tom

Bruce wrote.....

OK, how the heck do I get some delay on the memory channels?
When the transmission stops, it scans immediately, losing replies
I have the programming software, can't seem to get any delay set in
memory channel scanning (I think the pause setting is for searching)
Anyone?

HAARP microwave weapon disaster [of Columbia Space Shuttle] has
ancient ties to space warfare:

Akheneton is Isis-Ra-El or Moses
-- conspiracy in northern Greece, circa 3000 BC

http://www.a-m-h-r.org/aa/starry.html

The unfolding of the revelation of this plasma is made possible by the
fact that we ourselves are also the stuff that stars are made of. Our
electro-magnetic relationship as a race to the very stars in the sky
that we see at night is intimately integrated and potently plays
itself out in human history. It is non nuclear plasma, non-ionic,
non-electric, a form of magetism and gravity that we are completely
ill adept to translate with present day science.
http://www.angelfire.com/electronic2/haarpmicrowaves/haarp_conspiracy.html

"Let the stars be burnt up in the fire of my nostrils! Let all the
gods and the archangels and the angels and the spirits that are on the
earth, and above the earth, and below the earth, that are in all the
heavens and in all the hells, let them be as motes dancing in the beam
of mine eye!

I am he that swalloweth up death and victory.

Then there is a great plain with soldiers fighting upon it, and an
enormously high mountain carved into a thousand temples, and more
houses and fields and trees, and great cities with wonderful buildings
in them, statues and columns and public buildings generally. This goes
on and on and on and on and on and on and on all on the hairs of this
lion's tail.

And then there is the tuft of his tail, which is like a comet, but the
head is a new universe, and each hair streaming away from it is a
Milky Way. And then there is a pale stern figure, enormous, enormous,
bigger than all that universe is, in silver armour, with a sword and a
pair of balances. That is only vague. All has gone into stone-gray,
blank. "

I AM in a vast crystal cube in the form of the Great God Harpocrates.
This cube is surrounded by a sphere. About me are four archangels in
black robes, their wings and armour lined out in white. In the North
is a book on whose back and front are A.M.B.Z. in Enochian characters.

In recent years it was discovered that the Redwoods and Sequoia trees
had excess lime deposits at the base of these trees. Is it possible

that these trees have evolved the technique to remove the lime from their water before it is taken in? [3]

"Lime is a coarse, white, solid substance that has many industrial uses. It is very caustic (strongly alkaline), and can rapidly destroy animal and plant tissues. It is often used to treat waste materials. It has a strong chemical action when mixed with water, and may become hot enough to boil the water.

Manufacturers use it in gas welding, glass, steel, refining sugar, bleaching powder, fungicides, fertilizers, cement, mortar, and whitewash."

And behind the plume is a shining filament of quartz, suspended vertically from the abyss to the abyss. And in the midst is a winged disk of some extremely delicate, translucent substance, on which is written in the "dagger" alphabet: Torsion is iniquity. (This means, that the Rashith Ha-Gilgalim is the first appearance of evil.)

There is a clash of a myriad silver cymbals, and silence. And then three times a note is struck upon a bell, which sounds like my holy Tibetan bell, that is made of electrum magicum.

The four Enochian characters are each attributed to one of the four Cherubic signs; Taurus, Aquarius, Aries and Leo, respectively. The robed archangels are the four Guardians; the four Watchers; the Four Horsemen, esp. Gabriel, aka Fomalhaut; the Nephilim or Secret Chiefs.

First is the possibility that through crossbreeding with cavewomen, man as we know him shortened his life span. This would mean that Noah's three sons brought with them wives, who were not pure descendants of Adam but those of the Anakim (Heb. ï¿½anaqim, sons of Anak, Heb. ï¿½anaq, long-necked) or possibly the Canaanites. The early Sumerian texts called them Anunnaki, "those who came from heaven to earth."

The Anakim as in Genesis 6:4 they are the sons of the sons of God, they are called the Nephilim (uncertain etymology, fallen ones), or giants (Heb. rapha, raphah, Heb. gibbor, mighty, Rephaim of Canaan ancestor of Og, king of Bashan, Emims of the Moabites, Zamzummims of Ammonites Heb. murmurers, Zuzites in Gen. 14:5) who were of old, men of renown. This crossbreeding may be the reason why the ancestors believe that sexual relations could affect one's health. One might even suspect that the Anakim were possibly the Greek Gods of mythology 'fallen angels' the original Hebrew 'B'nai Elohim' who did not survive the Flood.

The second possibility is the atmospheric change of the ozone layer.

If this layer had been denser, then the immense radiation of ultraviolet rays was less also. Radiation is the possible cause of aging directly or indirectly in humans or animals. So when the change in the atmosphere came allowing more radiation to strike the earth's

surface it also caused more rapid aging. Little is known about the factors involved in aging.

The process seems to be correlated with specialization of cells for one or a few highly specific functions. The cells of these ancients were potentially immortal. Furthermore, the amount of radiation damage would be proportional to the chronological age. I do not think man's nervous system could take the strain his complex and fast modern world exerts on him in a thousand years, so in that sense man is better off with a shorter life span.

Apparently the dense clouds kept the radiation from affecting the water and prevented any variations in the atmosphere's temperature.

Water to the ancients was believed to have extraordinary chemical and medical properties, as if it were a universal solvent ensuring longevity. This Tradition is in harmony with modern science, which takes the view that water is a strongly reactive and highly complex mixture. Researchers study oligo-elements and observe that all metals are soluble in water in the presence of certain catalyzers such as glucose at certain temperatures. Some biologists think that old age is due to the accumulation of heavy water [deuterium] in the organism.

Some scientist believe that certain glands in the human body that no longer function may have caused the increase in the aging process.

The elimination of heavy water [deuterium] may prolong life, and such substance may exist in evaporated water, which could cause a reproducing of cells for centuries. Water then may be capable of prolonging life to a considerable extent by rejuvenating the tissues.

The answers may lie in the woody perennials, of which the Giant Sequoia and Redwoods are extreme examples. They may live for thousands of years, always continuing to grow. Maybe trees such as these contain a function incomprehensible to us in which water is transformed or unaffected by something that causes a rejuvenation of its cells.

[2]"Redwoods are among the world's tallest living trees. They grow 200 to 275 feet high and are 8 to 12 feet in diameter. In a typical redwood forest, these massive trees grow close together, shutting out most of the sunlight, leaving a cool, dim atmosphere. The Sequoia tree ranks among the largest and oldest living things on earth. Millions of years ago these trees grew in large forest throughout the world. Many of these trees are several thousand years old. Some present day trees are estimated to be 3,500 years old, around 1,305 B.C."

It is worth reminding ourselves, then, that the biblical edict to abstain from blood came not from Enki but from Enlil -- the God who had instigated the Flood, had wrought havoc in Ur and Babylon [but not Lot's Sodom and Gommorah], and had endeavoured to help Adam by saying that he would die if he drank from the Graal of Blood. This was a god who liked people, and the Sumerian records are very clear in this regard. Hence, if he forbade the taking of blood, this was likely to

have been an edict for the benefit of Noah and his descendants - it
was most probably the basis of their survival!

In strict terms the original Star Fire was the lunar essence of the
Goddess, but, even in an everyday mundane environment, menstruum
contains the most valuable endocrinal secretions, especially those of
the pineal and pituitary glands. The brain's pineal gland in
particular was directly associated with the Tree of Life, for this
tiny gland was said to secrete the very essence of active longevity,
called soma, or, as the Greeks called it, ambrosia.

In ancient Sumer, the key females of the Dragon succession were all
venerated as lilies [many lillies are clones and have no reproductive
capacity, some of the loveliest on earth -- lillies also have a
propensity for volcanic soil], having such names as Lili, Luluwa,
Lilith, Lilutu and Lillette.

Source record: 36589

Does anyone know of a scanner or receiver, recent or discontinued, that is NOT a wideband receiver but DOES have the 550-760 MHz range? Other than the Yaesu 9600?
I'd like to monitor the occassional broadcast audio freq's, and it doesn't even have to be a scanner, just a receiver. But I don't want to use one of those usually-lousy TV Audio Band multi-band relics... or, does anyone know if a scanner can be modified to add this range to its 'ears'?
Any history, advice, whatever, is greatly etc. etc.
Thanks-
Linus

The ALinco DJ-X3 covers this range and you can select WFM, NFM and AM to override the default for whatever frequency it's tuned to.

Air tankers going into a hot fire drop zone during the fires in Yellowstone a couple years ago. Might sound boring but you should have heard it, the lead pilot was calling out directions for the guys behing him. Meanwhile one of the planes almost collided with a chopper, it was harrowing to say the least. "HOLY !@#$%! Where did that !@#$% chopper come from?" I think the guy needed a clean flight suit when he landed. Got lots of great photos of them coming and going at the West Yellowstone Fire Cache.

I was rivited to the scanner for days. These guys were impressive!

here in allentown, PA we had a serial killer the cops were trying to find for years. they actually made a movie about this guy...forgot the name. but he had an obsession with this one women and tried to break into her house on 3 occasions. the 3rd time a cop was waiting in the dark living room. when the guy broke in, they got into a close quarter gunfight, and the guy ran down the street with the cop in hot pursuit...the cop is screaming into the mike that he's being shot at and i can hear his return fire....the area was saturated with cops, and they got him pretty quickly...

and, as a nominee for a modified darwin award, i was listening one night when a drug plane wanted to land at a local airport that had a control tower which closed after sunset. he was going to roll up to the fuel area and get gas. unfortunately, he picked the wrong airport, and landed on the main runway at the local international airport...without contacting the tower, of course. to put it mildly, the cops were waiting for him when he shut off the engines...

Haha, you perfectly described what some of the no life geeks in this group
would do if they brought new scanners with them in the car.

Easiest way is with a hex calculator available at your local wal-mart.

Next you can calculate it as follows

for example 16f3 = 1*16^3 + 6 * 16^2 + f * 16^1 + 3* 16^0

16^3 = 4096 16^2 = 256 16^1 = 16 and any number raised to the 0 power is
equal to it's self

so now we have:

4096 + 1536 + 240 +3 9 if I haven't made a silly arithmetic error in my
head.

the f * 16 may be confusing unless you convert it to decimal i.e. f =15 so
15*16 = 240

Hex = Dec
1=1 2=2 3=3 4=4 5=5 6=6 7=7
8=8 9=9 a=10 b=11 c=12 d=13
e=14 f=15

Mine was the MGM hotel fire in Las Vegas. I never heard panic like that
until 9/11. I was really glad I had all those old tunable and crystal
radios sitting around, I had everything I had going and still could have
still used a few more.

FUNNIEST thing I ever heard was at a Mcdonald's drive-up window.

Woman pulls up and says into the mike: " Uhhhh, I'd like to make an order ...
are you ready?"

Young guy at the other end doesn't miss a beat: "Lady, I was BORN ready!"

All the lady was able to do was to whimper a quavering and somewhat
frightened: " Oooh ..."

Actually every Windows OS computer has one under
Programs/Accessories/Calculator. Just click View, then select Scientific
rather than Standard. Click Hex, plug in the numbers, then click on Dec.
Voila.

I have an old Regency Whammo 10 programmable scanner for sale.
More just a curiosity than anything. Works fine but finding the metal
programming combs are like finding hens teeth. Have both manuals.

You might be able to program it with jumpers in place of the combs,
it's a binary diode matrix configuration. Manaual tells how to program
each frequency within the scanner's receiving range.

Email me if interested before I throw it at the trash truck next week.

Jon

Sports bar and karaoke bar about 100 yards apart, township line runs between
the two bars through the middle of an intersection. Obviously, intersection
is a favorite place to hide for two different police depts. The other night
one car leaves each bar and they each pull into the intersection - they see
the cops waiting there - both 'motorists' panic and try to do U-turns - and
they CRASH right into each other! Everybody gets charged with DUI and even
the passengers are underage. Made me wonder how often do drunks wreck
into each other? LOL! --- willy

Actually, for some modulation protocols (radar pulses ~10 us each
of a carrier in the range 300 MHz - 3 GHz), the human ear is very
sensitive to the EMR; it can detect a pulse only maybe 10 dB
above the threshold of a tuned receiver. However, hearing a "click"
or a "pop" is a far step from being "controlled" from a distance.

If we could be controlled by hearing stuff, the hearing theorists
would have made us dump all our TV's long ago.

I don't get the "antenna gain" argument: It applies to a receiver
because a big antenna can collect more irradiance. However, a
transmitter can't transmit more power than it has; so, a
1 MegaWatt transmitter never can average more than 1 MW anywhere,
by means of any antenna.

I know. It's like Uniden goes through all the trouble to make a great digital
scanner. Then, like Radio Shack, they design their scanners around 'frequency
ranges' rather than just making it continuous all the way from its lowest to
highest frequency (excluding cellular). And as far as step increments and fine
tuning, forget it. If only AOR had designed the 8200MkIII with trunking and
digital, it would be THE ULTIMATE scanner, hands down.

Not true. Antenna gain effects the ERP of a transmitter. This is the Effective Radiated Power. For instance, an antenna with only a 3dB power gain will allow a transmitter with only 1 watt of power to appear to be transmitting 2 watts of power. This apparent gain is made at the expense of unity of coverage. In other words, the radiation pattern is affected. In the case of a yagi antenna, the power output is focused in one primary direction. You "gain" power in that direction at the expense of signal to the other directions.

The Stanley Cup riot in Vancouver in 1994. I listened as it happened and I will tell you that the news media got it all wrong. It was started when the guy fell off the bus trolley lines and the Ambulance needed help getting to him. The crowd was trying to tip over the Ambulance. That is when things got bad. All the police were trying to do was clear the intersection so that paramedics could get to this goof and save his life. Then the teargas and the Erwin guns came out to disperse the crowd.
Another good one was a hostage situation just blocks from my house that lasted all night and into the next afternoon. It ended with concussion grenades taking out the windows and teargas and thunder flashes used to confuse the guy while the black pajama people moved in.

Dave...

I live in the metro Detroit Michigan area. There are 3 digital systems around me that i'm interested in listening to: Western Wayne County consortium (which includes my police dept.), Downriver Mutual Aid (large area of police, fire, etc.) and Michigan State Police. That was my driving force to spend nearly $700.00 on that scanner.

As for listening to digital cell with the 250D...the answer is no. Those are different systems such as IDEN technology, that the Apco 25 card will not decode.

Chris

AOR AR-8600 multiMode Mobile/Base Receiver officially covers
530 KHz ~ 2 GHz but can tune down to 100 KHz.
A very high end professional grade Communications Receiver.
Versatile power options. Incredible number of features and
functions including;

Accurate 8.33kHz airband channel spacing.

Temperature Compensated Crystal Oscillator (TCXO) that provides
an ultra-stable frequency reference.
Receives Wide, Narrow and SuperNarrow FM,
Wide and Narrow AM,
Upper and Lower Sideband and CW.

The AR8600 can accommodate up to five optional cards that enhance
certain functions. Such as, CTCSS, Digital Recording, Tone Eliminator,
Additional memory and/or Voice Inverter module.

Option for Collins Mechanical Filters.

1000 memory channels (20 banks X 50 channels each), alphanumeric
channel labels, RS-232C port for computer control, with free software
available at the AOR web site.

Much more and NO frequency gaps.
Can send brochure <.pdf> and/or picture if interested.

Like new with box and all documentation.
PayPal payments only.
$750 plus S&H.

I heard fire engines being dispatched to MY house while I was driving home shortly after a frantic phone call from my wife telling me there was a smell of smoke in the house. Turns out it was the A/C blower motor burning out and blowing that burnt wire smell all over the house just before it seized up...the firemen told me it was our refrigerator! I lost a little respect for the local fire company that day...but that was before 9/11.

You do not get increased power. If you have a garden hose that puts out 5 gallons per minute, you can put it through a 360 sprinkler or a directed nozzle. While you can get me wetter with the directed nozzle, it is still 5 gallons per minute. To get me just as wet with the 360 sprinkler would require considerable more water flow.

All the "gain" in an antenna is in comparison to a reference dipole.

With all due respect, your understanding of gain increasing power is incorrect.

You are absolutely correct, then 16^0 times a number is equal to it's self.
I simply eliminated a step. I took a few other liberties with pure
mathematical definitions as well, all for purposes of simplification.

I think you're wrong there. It works both ways, whether transmitting or receiving. A high gain directional antenna, such as a beam, can seemingly increase the transmitted power of a signal. This is because most of the signal is beamed in one direction instead of omnidirectionally. So the transmitter power isn't increased, but the ERP is.

Mine was hearing a local cop who was following me trying to run my tag. It was late at night and we were headed home from the general direction of one of the favorite bars, so he was apparently after a drunk. He told his dispatch that my ham tag was personalized, which is incorrect. To run a personalized tag in our state, you have to use the two letter county abbreviation with the tag number. This allows different people in different counties to have the same personalized license plate. However, for amateur radio tags, you don't add the county designation. He kept following us until we turned, and he sped up to run around the block, apparently trying to get ahead of us. However, we were just a couple blocks from home, so we turned off and pulled into our driveway while he drove around looking for us. I was tempted to call the PD to tell them how to run my tag, but I didn't.

As usual in these groups, we are asked for help with very little information from which to proceed. You want them of "various sizes". What does this mean? If you have the RF designs, why don't you have the microstrips that go with them?

Give me a concrete example, such as the impedance you want, the electrical length you want, the type of material you are using as a substrate (i.e. alumina, pcb fiberglass, ???) and the thickness of the metal trace. I'll work the example and then tell you where to go to find the same software I used for the example.

If my home was broken into, I wouldn't even bother to call them unless I needed a crime number for an insurance claim. About the only time the police in the UK ever get a burglary case cleared up is when they catch somebody 'in progress' and they ask for dozens of other offences to be taken into account when sentenced. In practice, all this does is help the clearup rates and let the scumbag get off scot free.

The most "important" thing I've ever heard was a cop talking to his
lawyer. He'd been accused of strangling a local Hispanic man in
custody. "I just want it to be over. Man, I want it to be over."
It's good to be set up to record this kind of thing when possible.

Sometimes an important figure will come to town and they'll reveal the
route they intend to take to the governor's mansion or whatever.

You can hear countless calls of adulterous people who've stepped out
for a gallon of milk so they can call their lovers from a grocery
store parking lot.

I like to note patterns. Obviously, there are lots of contractors and
real estate agents during the workday, and lots of gamblers on the weekends.
Old people drop like flies at church on Sunday morning! It's incredible
how many heart attacks are going on at that time of the week.

I'm always interested in how truly innocent and boring many conversations
are. "I've been quilting all morning, and Irv is tying flies again. Can
I get that croissant recipe from you, Mabel?"

Generally, I think women are the vicious monsters men say they are, and
men are the stupid children women think they are. No great revelation, that.

It sounds to me like you are listening in on cell phone calls.

Why don't you go public with what you have heard. Then let us know what kind of deal your lawyer gets for you for illegal wiretapping. Its happened before....people listening on scanners to phone calls. They go to jail or prison. Simple as that.

If you are going to listen to the phone calls, don't be stupid and advertise it.

Does anyone know of a scanner or receiver, recent or discontinued, that is NOT a wideband receiver but DOES have the 550-760 MHz range? Other than the Yaesu 9600?
I'd like to monitor the occassional broadcast audio freq's, and it doesn't even have to be a scanner, just a receiver. But I don't want to use one of those usually-lousy TV Audio Band multi-band relics... or, does anyone know if a scanner can be modified to add this range to its 'ears'?
Any history, advice, whatever, is greatly etc. etc.
Thanks-
Linus

^ Nobody likes a cop until a criminal is at the door.

Cops are necessary, it's just that sometimes it's hard to tell the difference between a cop and a terrorist. Ask anyone who has been the subject of a felony stop and subsequent arrest when they got the wrong guy. No recourse permitted. With Bushes new laws it's now getting harder to tell the difference between a Nazi government and our own.

I think I see the problem: I am referring
to total power output, which would be measured
in Watts; you are referring to intensity
or irradiance, which would be measured in
W/m^2 or W/cm^2.

For example, a 1 W source at 10 GHz could
have, say, 25% of its output collected by a
parabolic antenna and focussed onto
an area as small as 1/2 wavelength square
(1.5 cm x 1.5 cm ~= 2.5 cm^2).

So, it could provide .25*1W/2.5 ~= 0.1 W/cm^2.
This could be achieved at a distance of 100 m.

However, without the parabolic antenna,
using the inverse-square law, a 1 W
nondirectional source at 100 m would
irradiate any small area at only about
25 uW/m^2 ~= 2.5 nanoW/cm^2.

So, there would be an "antenna factor"
of around 1 billion, in this artificial
example. But, the power delivered even
with the parabolic antenna would be LESS
than the power actually radiated by the
transmitter.

If there is a 1 MW transmitter, it won't ever be able to deliver 1 MW in any localized region, anywhere, assuming it actually is radiating and not just hooked to a waveguide or in a cavity.

I would guess that a 1 MW transmitter might be designed to radiate 1 MW upward, so maybe all of it would hit the ionosphere somewhere. But the antenna factor really wouldn't matter much at all. Maybe it would be 2: Instead of losing half of its power downward, it all would go upward.

Do an FCC search on state/county/frequency or using the FCC Advanced search search for city and state. Many franchise restaurant owners are listed by their name and not by McDonalds, Taco Bell, KFC, etc. Sometimes the city address is shown and sometimes it isn't. Check the latitude and longitude and cross check to a make to determine more accurately the location. Sometimes but not always certain restaurants such as McDonald's, KFC, etc.,tend to have a common grouping of assigned frequencies. Some will be low vhf and high vhf and there are frequency cross relationships. Others typically may be in the 460-469 mhz. range again with cross frequency relationships. Often only 1 or 2 frequencies out of 8 or 10 assigned are used.

Since when is 311MHz not an AM FRQ? I run a lot of ham equipment and they are all AM and guess what, they run around 300 MHz. You can run FM along with some other modes, but a frq is a frq and a mode is a mode.

Check out this website for proof...
http://www.columbiaelectronics.com/an_grt_21___22_transmitters_for_airports.htm

I don't want to toggle any delay settings on the 7100. I want the scan to resume only after about 2-4 seconds after the last carrier drops. Scanning with the delay off solves nothing. Having to manually toggle a scan delay up to a maximum of 15 seconds is not a desired solution. Unfortunately it was not made with normal scan delay resume feature.

If you've already tried ScanAtlanta, may I suggest the Atlanta
Frequency Directory from Scannerstuff. You didn't mention what county
you want, but it covers most of north Georgia. It's not a freebie, but
its 80+ pages include many of the codes, signals & unit IDs. Check at
www.scannerstuff.com

(In the interest of full disclosure, I'm a contributor to the AFD.)

Most interesting, but definately NOT cool:

Larry Davis shootout with the cops in the Bronx

The crane falls in Manhattan, trapping a woman

Lt. Francis LaSala, NYPD ESU, runs into a burning building on the way
back to quarters. The dispatcher is unable to understand his location,
and unfortunately he is killed making the rescue

First World Trade Center bombing

Colin Ferguson LIRR massacre

Heard all those live and in person on my trusty scanner!

ALSO
The plane crash in (Glen Head?) some years ago when the airliner ran
out of gas on the approach to JFK (heard all the missing plane calls
from the NYPD, then all the "plane down" calls from Nassau PD, and no,
they were not communicating with each other at the time.)

A foot pursuit of an accused murderer escaping from Court/Corrections
in Jamaica, Queens (WAIT, I was IN that one!!!!)

On Fri, 14 Feb 2003 00:44:59 GMT, joe <nospam@nospam.com> wrote:

I just got my vr-120d today from Ham Radio Outlet and love it so far.

Here is my problem. I am transferring the memory freqs from my pro-93
scanner.
For some reason it will NOT (Yeasu) store these freqs!

154.65
154.175
155.205
155.22
155.265
155.34
155.4
155.775

If I use the VFO to tune them in, and then hold the FUNCTION + VM and pick
the channel
I want to program them in and then try to store them, IT WILL NOT DO IT! It
will
store other channels, but not those above. Anyone know why? Thanks!

What is included in that burst is the Radio identifier.

If a person with that radio hits the emergency button, the radio will transmit the digital burst continuously, like someone it repeatedly keying the microphone over and over again, to alert the dispatcher that the unit is or may be in trouble and in need of assistance.

2693. Radio Shack Service?

Newsgroup: rec.radio.scanner
Date: 2003-02-15 04:09:25 UTC
From: genericax@hotmail.com
Message-ID: <776e0325.0302142009.1b6539b@posting.google.com>
Source record: 36476

OK, tell me who is wrong?

I bought 2 GMRS radios from my local RS store like 45 days ago, and one of the rubber duck antennas broke. I ordered the replacement from 1-800-THE-SHACK and it arrived today. However, it didn't match the existing antenna- it was like 2" shorter and a different style.

I called them back and I asked for either the exact replacement, or for them to replace at no change the antenna on the other radio so they would match. They refused. I called back again and this time was told they would "send it to research to determine why they are different".

They also said that the new antenna performs like the old one. BS. My Masters in EE says otherwise. I can pretty much guarantee that the characteristic performance of a 2" shorter antenna is substantially different in both carrier strength and pattern.

However, let's say even that claim is correct? Am I unreasonable to expect an exact replacement part for a 45 day old item from the store? And was this request unreasonable to send me the other antenna? My biggest concern is that when I go to sell these radios, which after this experience may be very soon, what questions would mismatched antennas raise? If I was a buyer, I'd sure wonder about it, and given the option of identical antennas or different, I'd probably choose identical. So as the seller, I'm now at a disadvantage. I'll already have a hard time recovering the hundreds I spent on these, now it looks like I can't even sell them at all unless I pony up for 2 antennas.

To me this is like I buy a set of dishes, and a month or so later break one, and order a replacement. They send me another pattern and a smaller plate, but tell me "tech support says this plate will hold as much as the original, so tough luck. Enjoy your mis-matched plates".

I spend probably over $1000 a year in RS stores; after this I'll go out of my way to buy elsewhere, and I'll relate this experience to everyone who is interested in buying a radio from them. I can't imagine its worth it to them- in fact "sending the problem to research" is probably more expensive to them than my simple request to send me a duplicate antenna for the other radio.

I told them that I had a similar experience recently with another company, where a part was no longer available, and that company sent me an entirely new device which was worth about $300. Their response to that? "We're not them".

Well on THAT POINT they were right! Amazing that an American company in the 2000's can have so little insight into customer service and how to make customers happy. Its no wonder their market share is shrinking. Seems like a sure way to become the next K Mart.

Gx

I am tired of walking into RS and asking, "Do you have any BNC connectors?" and the reply is "Do you want a cell phone or a satellite dish?" I finally just came out and asked what the hell was up. I was told that this came from upper management. The company has hired secret shoppers to go into RS stores. If someone is caught not offering a cell phone AND a sat dish, they can be fired. If they are written up twice, it is automatic termination. Nice company to work for, huh? I have sent emails to RS corporate offices. I encourage all to do the same.

Why? I won't ever work there. If that company wants to attract that sort of employees then let them. Their products suck, their personnel in the stores are horrible and frankly, there are much much better products and services available from other companies in my local area that I spend my money with.

RS can kiss my ass, but I'm not about to send any letters to them about what they are doing wrong. Let them figure it out on their own. That's what top management gets paid for.

Why should I be forced to use 2 radios? What good is 1000 slots if
many can't be used due to the 1 trunk/bank? It's just bad engineering.

>B) To add more banks, you'd need to add more buttons,

You're correct. The antenna won't perform exactly like the other, but it's
nothing to worry about. 5 cm isn't that big of a deal.

> However, let's say even that claim is correct? Am I unreasonable to
> expect an exact replacement part for a 45 day old item from the store?

Have them send you the part even if it takes 45 days. What's the big deal?
If you really want that bigger antenna then wait. Meanwhile enjoy your
radios. Now if Rat Crap wants your radio back for that 45 days, then tell
them to refund your money. If they don't then lesson learned. Don't order
anything from that store again.

> And was this request unreasonable to send me the other antenna?

No.

My

> have a hard time recovering the hundreds I spent on these,

You did not spend hundreds on the GMRS radios and if you did then you're an idiot. If you've got an EE Masters then you probably have the brains to go online and do a little research before wasting your money. GMRS radios can be beought for about $50 apiece and not hundreds.

Didn't take me spending $1000 a year. Took me about spending $20 and getting home and finding out it was poorly manufacturered. Another experience I had was with their cable TV splitters. Absolute CRAP. Their splitters will corrude in one season when placed outside. Absolute crap they sale there.

> I told them that I had a similar experience recently with another

No shit, really? That comment doesn't surprise me from RS. They're making minimum wage in that store. Do you think they give a Rat's ass if you are happy or not. Nope, they want to go home after they make their measly pay.

> Well on THAT POINT they were right! Amazing that an American company

Yup. You hit the nail right on the head with that comment. I stopped shopping at KMART because of their poor customer service. Radio Shack and

KMART were off my list very quickly. Anyways, if you really think about it
Radio Shack really doesn't have that many "WOW" products in their store.
Just a bunch of plastic trash.

What's the matter, are you jealous? You are nothing but a shit eating dung beetle who is too cowardly to post using your real name.

We see you slimy pieces of carp come and go, year after year, stirring up the crap and looking for a fight. You're a neigborhood bully who desperately needs the living shit beat out of you, fingers and computer smashed with a sledge hammer and never allowed to touch another computer again, ever. Now go get in the toilet, flush it and go live with your buddies.

My GAWD, where do these scum licking cowards come from?

To use a "GW Bush" euphemism, Radio Shack has become "Irrelevant".

They only sell Chinese-made consumer goods
toys and pure useless junk. They want to become the
WalMart Electronics Store and are allegedly going to
discontinue selling their brands of police scanner
radios and shortwave sets shortly. Phooey!

I say "good bye" to them. They have nothing any more
that interests me and their salespeople are either complete
morons who can't get a sales job anyplace else, or are
college/high school kids who don't give a shit regardless.
Our local place has 3 teens/twenty-somethings in there
and all they ever do on Co time is talk on their Sprint cellphones to their
girlfriends trying to set up a time to go visit em' and get their
ass laid... (can't fault them for that....hey-hey!)

I predict that Radio Shack will file for Bankruptcy and
their stores will all dissappear by 2006 at the latest.

It is for the reasons above that I avoid Radio Shack like the Plague. Rad
Shack has for years made customers feel unwelcome what with their policy of
demanding the names and addresses of their customers. Couple this with the
fact that the Rad Shack employees don't know one end of the radio spectrum
from the other and what you have is a group of idiots working for minimum
wage.

Radio Shack known as Tandy in the UK have already sold their shops to a cell phone company and gone.

What moron names his son Fred Hambrecht?
And by the way... who is so "fisf&#65533;rn&#65533;m" so he puts Dr infront of his name in
a newsgroup?

Wake up...get lost...

Dr. Fred Hambrecht Sr are you sure this person wasnt in Canada or Europe or
any other free country around the world? The Earth doesnt spin around the
US..it spins around the Sun.

And by the way...im a Dr too but i dont put that infront of my name and
being nosy.

Funny thing is that RS in not the only store to do this. How about McDonalds(can I super size that?) clothing stores always try to sell more. All you say is 'no thanks, do you have any BNC connectors'. Then watch the befuddled look on their face.

I walked into a RS just yesterday and nobody asked me that if I wanted
a cell phone or a satellite dish. They only asked if I found what
I came in for, and if the adapters I picked out were all the same one
(so he wouldn't have to scan them all).

Perhaps they only ask people who look like suckers about cell phones.

I have been trying to find VOX Scanner Recording Software most of the night.
I only found one that seems to be worth anything (but thankfully it's free
and doesn't need to be installed to run)...

http://ninopo.freeweb.supereva.it/radio/VoxRecorder/

Anyone know of anything that might be possibly better and free for Windows?
I would like to find something that might save files as mono 32 KB/s .MP3s,
better time logging, good GIU, etc.

I would also be nice to where you can listen to your scanner through your computer speakers since you have to have an audio cable hooked up from either the HEADPHONE or EXT. SPEAKER jacks on the scanner to the LINE IN of your sound card. This kills the built in speaker on probably every scanner ever made including my PRO 2006. Perhaps the program could have a check box to mute the scanner audio at will.

BTJustice;
The VOX software you provided a link to is the sameone which I use.
I've tried a few and it seems that VoxRecorder is the most reliable I've
used.

If you go to: http://www.milaircomms.com/audio_library.html you'll find
a few of my interesting radio catches which were recorded with VoxRecorder.

I live VoxRecording running nearly 24 hours then every morning I just
rename the VOX.wav file to something like 020703.wav (Feb 7, 2003).

2724. Boston Logan Procedures & Freq's Questions ?

Newsgroup: rec.radio.scanner
Date: 2003-02-15 14:52:56 UTC
From: Robert11 <rgsrose@tiac.net>
Message-ID: <b2lk5qhlk1@slb5.atl.mindspring.net>
Source record: 36407

Hi,

Enjoy listening to "Boston Approach" control and "Boston Center" for Boston Logan, but was wondering
about the actual landing procedure protocals and hand-overs for a plane coming in to Logan.

After the plane's Approach Control check in, it would seem to me that there's another controller, somewhere, that gives the actual clearance to land. It doesn't seem to be Logan Tower or Boston Center that does this.

Can anyone, please clarify this a bit for me, and provide the frequencies for the final landing clearances, if I am right about this?

Also, for a plane approaching Boston (from a distance):

who would he first contact? (at what approx distance out?)
then ?
then?
etc.

Much thanks,
Bob

The ICOM R-2 is a "Communications Receiver" and can get HF, UHF and VHF. It functions like a scanner as well.

It must be really different in other places, but in Detroit, Toledo, and
Columbus, I have never, ever been asked about either a dish ir a cell
phone. I must be really lucky.

True on all counts. I remember "The Good Old Days" when a lot of parts
house workers got their jobs because they loved electronics and the
people who hung out there. Those days are gone, I'm afraid. Damn.

You are right to expect an exact replacement for a current product supplied in a reasonable, courteous fashion. You were wrong to assume that Radio Shack is capable of providing this.

Regarding the replacement antenna...don't assume a 2" shorter antenna will not perform as well at that frequency range. Your MSEE should tell you that the performance depends largely on the design, and therefore a measurement would be required to collect the necessary data required to draw a conclusion. Even I know that, and I only have a BSEE! Here is an opportunity to learn something that might be useful later. I could name several instances of antennas I have in which shorter designs outperform longer ones on certain frequencies, even if those frequencies were in the range that the antennas were designed for. Your MSEE should have provided you with the intuition to know that there are multiple variables that determine overall length, and performance is not necessarily directly proportional to the length of the finished product. It's even possible that the new antenna is better than the original one, but you need to measure it to determine that. To apply a famous proverb: It's not the length, it's how you use it. ;-)

The problem was that I was holding the function + v/m key longer than I had too. I now just have to press and release the keys, and not hold it for the 2 seconds like the manual says!

Thanks for your input!

God bless

2731. Daytona 500 Driver/Crew Audio Broadcast Update!

Newsgroup: rec.radio.scanner
Date: 2003-02-15 15:43:02 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3E4E6006.10504@licensed4fun.com>
Source record: 36414
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

Tomorrow is the Big Day! As many of you know Iï¿½ll be once again broadcasting the Live Driver/Crew and NASCAR Official comms during the Daytona 500 on 2/16/03.

I plan on starting the broadcast at about 10 AM EST (race time is 1PM EST). Prior to the start of the race Iï¿½ll be broadcasting Daytona International Airport Air traffic, after the Military fly-by (weather permitting) Iï¿½ll switch over to the Driver/Crew/Official frequencies.

There are a few changes from last year and even from last weekends Bud Shootout race so PLEASE before the race begins please make use you can still receive the audio. Go to http://www.MilAirComms and follow the link to Daytona 500 Audio. I strongly suggest you go there today and read about the change and make sure you still can receive the audio. To allow you to test your audio Iï¿½ll be broadcasting Daytona Air traffic comms today (I might later switch to Daytona Police/Fire), this will give you a good and very active audio source for you to checkout your setups before the big day comesï¿½..

Thanks,
George

Radio $hack has always had secret shoppers, it wasn't until the 4th quarter (oct-dec) that they put them out in full force. I worked for that lousy company for a little over a year and quit during the time they were making this a big deal. Here in NJ they are enforcing it & will fire anyone found not asking. I liked it much better when I first started, you didn't have to bother customers with that, you only had to feel like a jerk asking for someone's name & address. Now, they did away with the N&A thing and they have to deal with the cellphone & dish thing. I could probably write about 20 pages just on why the push accessories on big purchases, and you would be surprised at what R$ actually pays for these items and what they sell for. Some items I remember there being an 800% profit margin, and there were Managers who purposely ONLY put gold wire products on display and put the cheaper ones in the back room saying they were out of stock. The store I worked in was famous for only putting out the higher priced items & kept the cheaper ones in the back, I quit because I was tired of having this BS shoved down my throat and having to lie to a customer when they asked if we had anything other than gold products. Don't let these people rook you into the accessory game, if it's more than you want to spend and you know there is a cheaper alternative, DO NOT BUY IT !!!!!!!! Go to another electronics store or look online.

Hi Mitch,

Download AppCAD http://www.hp.woodshot.com/

Select Passive Circuits (bottom left) then Microstrip.

A few assumptions:

Sounds like you are new to this area so you won't be using any exotic substrate. 'Regular' fiberglass PCB material is usually FR4 (please check in your case), so pull down FR4 (Er = 4.6).

If you are making this yourself you are probably using 1/16" material, double sided (very common), if so set H = 63 mils (1/16"). Laminate thickness doesn't affect impedance too much so set T = 2.0.

Width does affect impedance, set W = 114 mils.

Hit F4, impedance = 50 ohms.

AppCAD is very easy to use and should give you a good intuitive feel about Microstrip very quickly. Obviously waggle parameters and see how impedance etc. are affected.

This should hopefully be a reasonable start. Also explore the rest of AppCAD. Another free package worth looking at is RFsim99, great for exoploring S parameters etc.

Regards,

Mark.

I used to love going to Radio Shack to browse for parts for some project
or another. Now it's almost a dreadful thought thinking about doing battle
with the sales droids for a few bucks worth of parts.

2741. Radio Shack Pro 25 problem

Newsgroup: rec.radio.scanner
Date: 2003-02-15 16:51:51 UTC
From: Jim Mitchell <jnjmitch@nospamremove.swbell.net>
Message-ID: <Heu3a.201$oY.181959892@newssvr12.news.prodigy.com>
Source record: 36424

I have a Radio Shack Pro-25 scanner and have noticed that it has stopped picking up 800mhz police frequencies when I'm at home and in my neighborhood (in the southwest part of St. Louis City). It picks them up just fine at work (near north St. Louis City). Occasionally it will pick up a very light signal at home, but it's filled with static and will be lost if I move the scanner an inch. I've had this thing for years, and rarely use it, but turned it on recently and was disappointed that it didn't work. I took it into Radio Shack and tried a different antennae, but otherwise they were of no help. Any recommendations? If I buy a new one, any recommendations for under $150?

I used to have one of those, along with a box of combs. I later made up an interface box and controlled it with a General Automation SPC-12 computer. (1969) and it really wowed scanner folks.

They made an external box that plugged in, in place of a comb and the frequency could be dialed in with a knob for each digit of the frequency.

http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTracker.htm

Latest Version: 2.2.2
- Added the "Always on Top" function.
- Added "Alternate Colors" function.
- Corrected issues with the BC250D and BC785D support.
Specifically with LTR tracking and Resume on Identified functions.
- Corrected problem that could prevent the Windows ALT-Tab
function from working correctly.

WHAT parts?? Our R.S. dumped it's "parts pegboard" 7 Months
ago and all they now carry is a goofy drawer in a corner which
has fuses, 1/4" audio jacks and mabey ONE or TWO horizontal
output transistors if your lucky......

Radio Shack is DEAD. Stick a FORK in it and have it for
lunch with your takeout WonTon soup and noodles...
Sooner everyone admits it the sooner we'll all feel better.

I really doubt your scanner and speaker had a upper audio frequency range of up to 10-15K. Most likely it was 3K, I bet would be about the limit of your scanner.

After readin your website i surfed and found much more on the downed
Shuttle and HAARP --->>>

Magnetrons, linear beam tubes, and vircators operate
at high peak powers below about 10 GHz [GIGAHERTZ] aka, 1,000,000,000
periods per second. Cavity dimensions and frequency are inversely
related. High frequencies, then, mean smaller cavity dimensions,
higher power densities,
http://infoserve.sandia.gov/cgi-bin/techlib/access-control.pl/2001/011155.pdf

HAARP and ELF: Some other important supporting technologies for an
HPM weapon system are target tracking and aiming equipment and methods
of damage assessment.

Target tracking and aiming for HPM weapons is, in one sense, easier
than for lasers because the beam width and spot size are so much
larger. On the other hand, since one advantage of the microwave region
is its ability to penetrate smoke, clouds, and fog, target tracking
may have to depend on radar imaging techniques. Aiming can be
difficult mechanically due to the size of high gain antennas.
Electronic beam steering would depend on accurate phase control of
multiple HPM sources. Damage assessment is perhaps the most difficult
supporting technology of all to develop. Since HPM weapons usually
depend on electronic kill or upset, there is no "smoking hole" as an
observable.

Right from the open public files of our own military on the new
electronic and beam and microwave warfare:

A Brief Technology Survey of High-Power Microwave Sources

Larry D. Bacon and Larry F. Rinehart
High Power Electromagnetics Department
Sandia National Laboratories
P. O. Box 5800
Albuquerque, NM 87185-1153

Abstract

This report provides a brief summary of the characteristics of contemporary high-power microwave sources. The focus is on their physical and operational characteristics and regions of application rather than their theory of operation. Magnetrons, linear beam tubes, split-cavity oscillators, virtual cathode oscillators, gyrotrons, free-electron lasers, and orbitron microwave masers are described. Power supply requirements and engineering issues of the application of HPM devices are addressed.

CONTENTS

Section
Page
1.0 INTRODUCTION 7
2.0 GENERAL CHARACTERISTICS OF HPM SOURCES 7
2.1 IMPULSIVE SOURCES 8
2.2 MAGNETRONS 8
2.3 LINEAR BEAM TUBES 9
2.4 SPLIT-CAVITY OSCILLATORS 10
2.5 VIRTUAL CATHODE OSCILLATORS 10
2.6 GYROTRONS 11

2.7 FREE-ELECTRON LASERS 11
2.8 ORBITRON MICROWAVE MASERS 12

3.0 POWER SUPPLIES FOR HPM SOURCES 12

4.0 HPM SOURCE ISSUES 12
4.1 COMPACTNESS 13
4.2 EFFICIENCY 13

4.3 ANTENNA SIZE 13

4.4 PEAK VERSUS AVERAGE POWER 13
4.5 SUPPORTING TECHNOLOGIES 14

In impulsive sources, the RF generator is implemented by charging the antenna, a transmission line, or a tuned circuit directly and causing them to
ring for one or several cycles by closing a switch. Examples of this source type are the various ultrawideband (UWB) sources and the LC Oscillator (LCO).

In linear beam sources, the RF generator includes an electron beam generator, beam transport, and a wave structure. These sources work by converting the kinetic energy of an electron beam into the

electromagnetic energy of the microwave beam. Examples of these sources include:

ï¿½ Magnetrons
ï¿½ Linear Beam Tubes (Klystrons, Backward Wave Oscillators, Travelling Wave
Tubes)
ï¿½ Split-Cavity Oscillators
ï¿½ Virtual Cathode Oscillators
ï¿½ Gyrotrons
ï¿½ Free-Electron Lasers
ï¿½ Orbitron Microwave Masers

4.0 HPM SOURCE ISSUES
Several issues must be dealt with before HPM sources can be taken out of the laboratories and weaponized. They include compactness, efficiency, antenna size, and peak versus average powers.

4.1 COMPACTNESS
Compactness is a general problem of military applications of HPM sources. (Benford and Swegle 1992, 19) The size of a particular HPM technology is often not apparent from a book or technical article describing only the tube. It is an HPM weapon system that must be fielded, not just a tube. The system includes the prime power source, power conditioning, microwave energy transport to the antenna, and the antenna. High powers, whether peak or average, drive up the size and weight of the system.

4.3 ANTENNA SIZE
High power density on target at significant ranges requires both high powers and high directivity in the antenna. High directivity requires an antenna many wavelengths in size.

Maneuverability requirements, survivability under fire, drag, visual signature, etc. make room for large antennas very difficult to find on any platform. In addition, increasing the power passing through a fixed antenna aperture increases the probability of electrical breakdown, especially at high altitudes or in a dusty environment.

Magnetrons, linear beam tubes, and vircators operate at high peak powers below about 10 GHz. Cavity dimensions and frequency are inversely related. High frequencies, then, mean smaller cavity dimensions, higher power densities,

Air traffic sounding good George. I just heard a pilot ask for permission to fly over the race track. He was denied, so asked permission to fly east to west
over Daytona. Got a negative response and reminder to stay outside 3 miles of track. Great audio. Good job.

And this is the part where we soon start seeing standard digital transmissions
converting to encrypted digital transmissions.

We have to first realize who RadioShack's market is. From what I have seen and read RadioShack is becoming less and less interested in serving the electronics hobbyist. The market now is the average joe who knows really nothing about electronics and really isn't concerned about where his product is made or the quality of it. Rat Shack is for the impatient and ignorant general public who are always in a rush and never have time to sit down and actually think about something. Rat Shack knows this and takes advantage of this by selling the overpriced cheap Chinese labor items. And also selling outdated electronics and computers which they sell as "new" Who honestly buys a computer or TV at radioshack?

But really, would a nationwide chain store like RadioShack survive if it only focused on electronics parts and equipment for the hobbyist? Absolutely not. For it to survive, it has to market things to the general public.

I haven't had real bad experiences with my local RatShack's. The people there tend to be knowlegable, it's a suburban shopping center anyway, your not getting innner city high school dropouts working there.

I got a factory refurbished Uniden BC60xlt-1 (entry-level). I've scanned it's range of frequencies (20-512 mhz) and I only get only occaisional garbled talking on wierd frequencies, nothing on the published Police/Fire/etc. I'm in suburban Detroit and pretty close to a great deal of activity I would think. Is this an antenna issue? What's a realistic range witht the stock antenna? Or, is the scanner itself having difficulty?

Thank you for your time.

And I'm just letting you know wrong about telling me I'm wrong about the Comcast User Agreement. Since you're so persistant, how about you copy and paste the parts of the TOS that you think I'm in violation of? Just as an example this is what some nitwit claimed I violated about 2 weeks ago.

news:gR6cnb-wA-aF8NyjXTWcqA@comcast.com

"Inappropriate Content - Distribution of content which is inappropriate for its intended recipient. Examples include: Distributing inappropriate content to minors and posting content that Comcast deems offensive on personal Web space."

Last time I checked rec.radio.scanner is not a moderated group, plus I've never seen a charter for this group anywhere. Not to mention Usenet is not my "personal Web space".

"Illegal Activities - Any activity which violates local, state, federal or international law. Examples include: Posting or disseminating illegal material (such as child pornography or obscene material) or using the Comcast Network to facilitate pyramid or other illegal solicitation schemes."

The english langauge is not a violation of local, state, federal, international or Comcast law. The langauge I use that may offend some people is not child pornography, but words. Words are not illegal. Also my words are not trying to selling anything. I am not in violation here.

If you happen upon other sections of the TOS that you think I'm in violation, please post them and I will show you where I'm not in violation.

Please everyone. You all look silly. Don't like something I say? Kill file me.

--
The following is a list of morons that
have a serious problem with the First
Amendment and insist upon either whining
or making attempts to silence other Usenet
posters by sending complaints to ISP's. To
avoid being on this list, please do the following.
If something I post disturbs you so badly, put
me in your message filter. This will prevent
you both from seeing my posts and getting
laughed at by myself and my ISP.

Isn't that odd, Ron? At my local Rat Crap store they just ask if they
can help me! And I usually say, "no thanks I know where things are."
They have never tried to sell me a cellphone or a dish. Maybe it's
just in the larger metropolitan areas?

I notice how they do that with the cables with gold connectors. I go
in there and all they seem to have on the shelves are gold connectors.
I buy them anyway since they of a better quality. But if it were
someone not wishing to spend more, it's a little unfair to them.

Two comets of war are in perihelion now, one approaching the sun's shores, the other just barely leaving the sun's pull, and they will pass each other [moving in opposite directions] around March 2-4, 2003, in between the orbit of Mercury and the Sun close to the star Fomalhaut [one of the Four Horsemen of the Apocalypse] the same day that intelligence agencies predict GW Bush will trigger a nuclear war by being the warmongering aggressor in Iraq. Comet 2002/ X5 (Kudo-Fujikawa) and V1 [NEAT] ... this comet will be making a very, very close approach to the Sun at perihelion, less than 0.1 AU. Look up their orbits on Google!

Is this a portent of a growing tension between the two top producers of microwave beam warfare, the HAARP of the DoD, and the Rosoboronexport (aka Rosvoorouzhenie) of Russia?

Or are Bush and Putin members of the same secret society and actually co-partners in this strategy?

Who are they planning to use it against?

Rosoboronexport [formerly know as Rosvoorouzhenie] -- Russian Calibration of Equipment to Measure High-power Pulse Electromagnetic Fields

Several years ago Rosoboronexport (then Rosvoorouzhenie) initiated a programme to harness Russia's technical know-how, especially in the field of microwave weapons, and create systems that would make attractive exports. The programme involved a search for concepts and developments that could enable Russia to establish a new level in military and technical co-operation with other countries. The fundamental principle of co-operation was there would be a categorical exclusion of information related to weapons of mass destruction and the technologies for their manufacture. All research and development activity on weapons has been under the stringent control of the Russian Federation Ministry of Defense, sources said.

The move to pursue previously classified non-strategic concepts and technologies with a view to exporting systems based on them has been applauded by Russia's special services, who have long worried about the leak of ideas and technologies to the West through scientific exchange. This was partly the reasoning behind giving scientists an opportunity to implement some of their ideas in commercial projects within a state-controlled scheme, removing external scientific contacts. Following the nuclear weapons tests by India and Pakistan in 1998, Russia offered foreign customers the use of its testing

facilities to evaluate the robustness of their military hardware in a nuclear environment, presumably in the presence of an electromagnetic pulse. The research was supposed to be performed in Russia. The advantage of this system, officials said, is that the customer could perform tests without setting off nuclear devices. All the contracts concerning this area have been strictly classified. However, the availability of Russian facilities is said to have triggered a boom of requests from abroad.

It's called retail sales.

Ever see the markup on clothing?

Ever have a Best Buy or Circuit City employee show you the cases, memory sticks, and card readers while you're shopping for a digital camera? How about a car dealer offering extended warranties or optional accessories? Ever have Amazon.com point you to other items they think you'd like?

If this stuff personally offends you, I suggest that you do all of your shopping via yard sales. That way you'll never be offered anything you don't want, and you can be assured the markup isn't too much. <G> Then again, you could always move to a dictatorship where only one item is available, in one form, with no optional accessories.

First of all try tuning in your local FM radio.
If this works the scanner is not broken i any way (probably).

When scanning you need to have time.
It can take minutes or hours before a frequency is used.

About the antenna, sure its important if you listen to longwave but when
listening to your local police
your antenna will do just fine. Try putting down the squelch to the line
when it stops making noise.
The squelch should not be put at maximum.

Write back if you have other questions, we will be glad to help you

Sure would have been nice if you gave your location. Many police
departments in the US and Canada have gone to 800 Mhz trunking system.
In a lot of cases, as here in Calgary Alberta Canada, they are 800
Mhz and digital as well.

It sure would be nice, that when anyone is asking for information on frequencies, 10 codes etc., to always give the location they are living in, then it is easier for that person to recieve the help they need. In most cases a writer will give the city or area that persone lives in, but I have noticed many times, it is not mentioned.

2776. limp wire emulating telescoping antenna

Newsgroup: rec.radio.scanner
Date: 2003-02-15 22:15:38 UTC
From: Dan Jacobson <jidanni@dman.ddts.net>
Message-ID: <87isvlmfc5.fsf@jidanni.org>
Source record: 36372
Cross-posted to: rec.radio.amateur.antenna,rec.radio.scanner

I've had great success replacing the telescoping antenna of my 48 Mhz cordless phone with an equivalent length of dangling limp insulated wire so I won't snap the antenna off again when walking in the woods with the phone in a fanny pack.

But now for the Icom R2 receiver with coverage from .5 to 1300 Mhz, I again plan to attach a limp wire. My question is what actions of coiling, bunching, looping, folding the wire will emulate changing the length of a telescoping antenna? Will I achieve my goal of being able to tailor my antenna to a particular frequency in an instant, while avoiding a rigid antenna sure to get bent?

I suppose the antenna will dangle down from a secure tie to my belt. If I somehow get the antenna caught, it will only yank my belt and not the radio... Perhaps I could even have the antenna 2 meters long with the first meter in a tight coil and the rest dangling down, with that first meter only extended for special occasions... or will that detract from regular performance?

In the bottom of the http://www.strongsignals.net/access/reviews/ of the R2, it is noted that there is a deep null in the 200Mhz band with the stock antenna provided, with a telescoping whip being the ultimate solution. With my limp wire I will do as good?

gee, the $8.00 bucks you paid me for shipping didnt cover priority and
insurance.
maybe you should have given more money to ship it.

and maybe you should have requested priority mail when you sent me the money
order.
i dont know anybody who can read minds do you?

and the radio i sent you was in mint condition and the case also....
maybe you should be thankfull
and i a little greatfull that i dont
rip anybody off and i sell my items
in the condition that i say their in.

just a little something to think about.

Microstrip impedance depends on several things such as board
thickness, copper thickness, dialectric constant etc.
Download a free copy of AppCad from www.agilent.com
It will design microstrip and other transmission lines for you.

You keep saying this, but never really give any reason why GRE (who is
making it for RS) wouldn't, or couldn't be coming out with this scanner.

It has so many advantages over the Uniden, if it performs as well, with
GRE's much better QC, AA Batts, audio, (the 250 I played with sounded
very bad), for 500??? I'm in.

Not to support R$ here, but try reading the warranty info on the radios;
chances are the antenna damage is not covered.

Speaking of the new RS strategy, I could not find a battery for my 2 year
old cell phone, even at the place where I bought it. Radio Shack had one.
They did not try to sell me a sat or cell phone, either. However, I do miss
the electronic parts that I can no longer obtain, unless on special order.
They do not even stock outdoor TV antennas, unless special ordered.
SF

Yes, I have 2 Radio Shack scanners and needed an ac adapter and was told they no longer carry anything to run my scanners, but they could sell me a new scanner. I told them not to hold their breath.Picked one up at Target for 12 bucks!!!!!!!!!!!! yeah baby it's all good!!!

I don't follow you. Standard (unencrypted) digital transmission was considered a great way to get AWAY from people who had scanners (think digital cell phones and the like). But digital transmissions can be received easily if one has a digital capable scanner. Soooo, the day that digital scanners become commonplace will be the day that most all digital transmissons will have gone encrypted. When we start seeing things available to the public-at-large , like in Radio Shack stores, is the day that something has become commonplace. Better start saving for that Cray.

If you are referring to the Pro-95 it's audio is far better than the BC250D.
I have both and the Pro-95 blows it away in the audio quality department.

what i was (in a sarcastic fashion) asking:

Are you saying that for some reason encryption is already in place not
being used in general - and all one has to do is flip a switch to go from
normal digital transmission to encrypted digital transmission?

and if NOT... are you saying that addition of encryption is so cost
effective (read: CHEAP) that it will be easily incorporated into future
budgets?

... JUST because Rat Shack sells digital scanners?

(did that make more sense?)

My local RS is very helpful and doesn't try to sell me anything. When my wife drags me to the mall, she shops and I browse RS and Cambridge Soundworks. BTW when I needed an 'S' Video connector, CS and Tweeter wanted $70, RS had one for $24.95.

Thanks for the suggestions, but these programs aren't really that great by today's standards. Both "VOX Actuated Recorder" and "Scanner Recorder 1.8.1" have their strengths and weaknesses. I think "VOX Actuated Recorder" is the better choice due to time logging within the program instead of a .LOG file like "Scanner Recorder 1.8.1" uses. As I said, I would like to find one that does the following...

- .MP3 Recording which is way smaller than .WAV files and sound just as good. 32 KB/s .MP3s sound perfect for radio communications.

- Listen to your scanner on the computer while it is hooked up from the scanner's "HEAD PHONE" or "EXT. SPEAKER" jack to the computer's "LINE IN" jack. It would also be nice to have volume and mute controls for the scanner's audio in the program.

- Total record time starting from 00:00:00 so, for example, 45 minutes and 33 seconds of total recording is displayed as 00:45:33.

- Time Log like "VOX Actuated Recorder" uses but better.

- Good looking GUI. I like the "VOX Actuated Recorder" GUI, but I like how "Scanner Recorder 1.8.1" shows the audio. I don't know what it is called but it is cool looking.

- No interruptions in recording caused by either a software or windows modem that is hooked to the sound card. When I connect to the Internet, the "THRESHOLD" bar in "VOX Actuated Recorder" is fully peaked for a few seconds so there are pauses in the total recording.

Later tonight, I am going to record the local weather forecast until I have a 1 MB .WAV and I will then use CDex to encode the .WAV into a 32 KB/s .MP3 and post it to this thread. If my math serves properly, it should be around 250 KBs.

Sincerely,
BTJustice

No I don't believe this is the case.

>and if NOT... are you saying that addition of encryption is so cost
>effective (read: CHEAP) that it will be easily incorporated into future
>budgets?

As a matter of curiosity, do you have any knowledge as to just how much it would cost to do this? If it's going to be billions, then I doubt you would see much encryption. But I know cities and regions who will spend millions for just such a system without batting an eye.

>... JUST because Rat Shack sells digital scanners?

Not just because Radio Scrap sells them, but because a few dozen other places will be selling them. I am in no way being condescending towards you, and remember, digital scanners as of yet are not even widely available on the internet (the 250D and cousin are the only ones) or from any of the big wigs such as AOR or Icom, etc. What will happen when there is a selection of about 99 different super multi-functional digital scanners being sold on the net and in stores near you? You have to approach this thing from THAT point of view, because that's exactly how radio-using agencies and corporations will be looking at it. Under these circumstances; when digital can be received and demodulated just as easily as slicing bread, will it be worth it THEN?

The reason I think this should be an issue of concern (and maybe I am over blowing it, or maybe not) is because if, say, 10 years down the road from now all communications have gone digital and encrypted, that would seem to be the end of the line for listening enthusiasts. You simply can not decrypt an encrypted signal and nor are you supposed to because it's illegal. I've been listening to scanners for years. I guess I'm just saying it would really suck it ever came to this.

2808. Power Adapter for the Pro-95?

Newsgroup: rec.radio.scanner

Not to sound argumentative, it may sound weird, but it was definitely
about 10KHz. I just generated a tone at 10khz on my computer and that
was it for sure. Very high pitch I know, but it was definitely at this
range (I'm a musician, and in all humbleness can remember 4 distinct
voices from a symphony orchestra piece I've heard only once, and
never forget a frequency :)

If you are referring to the kind of speech inversion you might hear
from inverted cordless phones, that definitely was not it. Perhaps
there is another kind of speech inversion I'm not aware of? If it was
speech inversion, it must have been being mixed at a mighty high
frequency. But I tell you the truth ... there was NO discernable
intelligence in that tone. I even tried recording it at very high
speed using analog tape and then slowing it down. All I got was a much
lower tone.

We were doing that a couple of weeks agoi when a close-out special jumped out
from the display and screamed, "BUYME!!!!".

Hoping to not attract too much attention, I walked up to the new salesguy
(knowledgeable and super nice) and told him one of his displays was screaming
at me. He gave me a knowing look ("This sucker's crazy!") and went back and
brought me out the cutest little SCT-510 tape recorder which works great with
my computer and the shortwaves. Little bitty console, minimal controls. Was
$79.95, then 59.95, closeout at $39.97 (the '.97" being the closeout
giveaway).

Btw, I've used into the hundreds of the RadioShack 120-minute cassettes -
never once a problem.

Speaking of the 250D, I want to get one, or should say have been
planning on getting one. What bites is that who wants to buy a $600
setup which can only receive 3600 systems, and then a few months down
the road have to buy another $600 system to get 9600. But of course,
by the time the 9600's are available, they'll be at 27600 or
something.

Uh, you do know they go into a little clip, takes about 5 seconds to
change them, you just buy an extra one.

>
> The Pro-92/3/5 series radios do NOT work on the San Diego City system.
> MAJOR disadvantage for my area.

Yeah, that's what the digital one is for!!!

>
> I've seen no evidence of bad QC from Uniden.
>
>

Then you haven't fixed them, like I have been doing since the old BC210 days, 20+ years ago. I have fixed many, many Uniden handhelds with the following factory problems/defects:

Speaker jack not soldered AT ALL to the PC board, it's just stuck in there with the leads spread out and it works for a little while, then it gets a mite bit intermittent, to say the least. 235's and 245's have this a lot.
NEVER seen it on a GRE made scanner.

Antenna connector not soldered, I have seen this on all Uniden handheld models, quite often actually, but only a couple of times on GRE radios and all were PRO43's around the same vintage. I've seen, and bought, a couple of Uniden base scanners with this too.

I can't even guess at how many BC100/200/205's that never had the nut that holds the BNC connector tightned up and in a couple weeks after purchase, the antenna lead snaps off. If tight in the first place, the nut loosens up after a year or so, and the same thing happens. Apparently, Uniden has something against LocTite. I fixed a lof of these problems annd made some decent money at it. I made some cash replacing speakers in Pro43's too, but there weren't that many blown speakers to replace.

Uniden's alignments are worse on average, than GRE, I had a deaf 895, took it and hooked it up to a signal generator, and instead of .5uv or whatever it was supposed to be, the sensitivity was about 2.5uv. It didn't take much to get it back to what it should be. GRE and RS aren't great with alignments either, but they are better than Uniden, most of the time. Gre gets most of them pretty close, Uniden doesn't. My BC9000 improved a ton when I had it aligned. I was pretty dissapointed in it until then. My senior citizen Pro2004, was picking up stuff the 9000 was passing over until the alignment, now the 9000 is slightly more sensitive than the 2004, but sounds worse on really weak stuff. The 2004 was deaf as a rock until I aligned it, about 3 months after I bought it, and again after it was repaired due to my blowing it up working on it while it was turned on.

If you open up any Uniden scanner, it practically has a sign on/in it that says "CHEAP". Take the back off a 245 and a Pro 93, it's like they are made on different planets. My 93 was made in China(horrors!!), but it looks and seems as solidly built as my Japan built Pro 43 does. The 245 looks and feels, cheap, cheap, cheap. The 250D feels and looks cheap.

Where do you think the amazing amount of refurbs Uniden sells come from?? They have improved tremendously since the 2500/8500XLT disasters, but they have a long way to go.

Dr. Noob Hambrecht Sr, Why are you being such pain in the ass?

Live and let live.
Mind your own biz.
Get a life.
Get layed.
Thats what you need

You still dont know if he was listening to the cell phones outside the US do you? Remember..its just the US that has laws against listening to cell phones. The other part of the world are smart and use standards that cant be listened to (by normal scanners). That is what this discussion was all about in the first place. You americans think you are so free but you have more rules to follow than anyone else.

^ That radio IS still vaporware.

"Vaporware", as most people use the term, is something that was claimed to be produced at sometime in the future and that failed to be produced. The Radio Shack digital scanner has not yet failed to be produced. The claim was that it may be ready by November. In December, it is does not exist and if the date has not been revised, you can call it "vaporware".

If you just want a computer controlled scanner then there is little to choose between the 100 and the 1000. The 100 has Stereo on WFM whilst the 1000 has a DSP option that can pull out the crap. The 1000 also has a discriminator out for feeding direct to packet modems (though there little use for that there days).

However if you want a quite good scanner combined with a reasonable shortware (HF and below) then the 1000 is definately a better buy, especially with the DSP in it. Without the USB/W/LSB option there are a numer of signals that just can't be decoded. Nearly all data signals on HF is USB or LSB and there are many amuteurs that use USB/LSB. Without CW morse is virtually pointless.

The real beauty about these sets is the ability to change the software if you don't like what is supplied by Icom. There are a wide range of packages which provide better software than Icom, and a hell of a lot of packages that make use of the PCs sound card to decode data and the like out of the receiver (though as I said before, most of these are HF and require USB etc).

P.S. You may read some negative comments about the PCR-1000 software being only able to run on Windows 3.1 or Win 95. This has finally been addressed by Icom - the latest version of the software is available on their web site for download (you just have to search for it and ignore the messages that they still have on there saying that there is no support past Win95 for the 1000).

The best place for info about these sets (and everything scanner related)on the web is at Strong Signals web site. This has specs, reviews, news, info (there is an excellent page on Computer controlled scanning) and loads of links to manufacturers, dealers, software and usefull info.

Go to http://strongsignals.net

Have fun choosing.

Distance. should I just listen to the chatter and try to guess what some
of the codes are and then see if the few I heard line up with something?
(is that a dunb question or what)

I recorded my local weather forecast. The total time was 00:02:26. I used "Scanner Recorder 1.8.1" since I can choose the quality of the sound which is...

PCM
44.100 kHz
16 bit
Mono
86 kb/sec

This yielded a file size of 12.2 MBs which is big but I wanted to preserve the quality of the broadcast so I opened up a free program called CDex and sat it to encode the .WAV as a 32 KB/s 44.100 kHz .MP3 which made the file size 570 KBs!!! AND, it sounds perfect. I wanted to attach it, but I guess I cannot post something with an attachment like that.

I did figure out that on my Windows Play Control that the LINE-IN was muted so I unchecked it and I can hear my scanner on my computer now while it is recording. Pretty cool.

I have it or something almost identical. It is a little too heavy
duty IMHO. I went for the Motorola clip that goes on with the factory
screw and double-sided tape.

If you want my HD clip, it is yours for $10 delivered in the USA.

How many of the folks moaning the passing of the "good ol' days"
actually BOUGHT all that they could of their last large component order
from Radio Shack? Or, did they mail order it to save money, then run
into Radio Shack looking for the $0.29 5 pack of resistors they left off
the order?

If components were even close to profitable, or even paying for their
fair share of wall space, Radio Shack would pursue stocking it to the
ceiling! Think about it, the only game in town selling components!
Any profitable business stocks what sells, period. If we're not buying
it, a business stocking it will soon fail. _WE_, the public, drive the
change at profitable retail stores.

Been to a "ham radio" store lately? How many components did they have
in stock? <G> Most ham ops are "appliance operators" these days, with
more and more of the hardware microprocessor based, not field
repairable, and not hardware modifiable. "Mods" will be done more and
more via software. The electronics and radio hobby of the last 10
years and the future requires as much or more knowledge of c++ than it
does of a soldering iron.

Weather is going to be the key as to the success of the Daytona 500. It doesnï¿½t look good. However we still will be broadcasting live Driver Crew comms. Before the race starts weï¿½ll broadcast Daytona Air Traffic as this is a busy day with ï¿½big shotsï¿½ flying in for the event. After the race is over (or called for rain) weï¿½ll probably switch back to AirTraffic.

In the event the race is cancelled or halted before 250 miles are run then theyï¿½ll be completing the race tomorrow (Monday). In that event I will also be broadcasting.

You're equating brains with education. Big mistake. I've seen college educated salespeople that can seemingly operate very complex computers but not know how to turn a shortwave radio on. They simply don't care to learn about things anymore. Just cell phones, computers, and games. If I had idle time (as a salesperson) I'd be tinkering with everything. They can't be bothered, and as a result, they are increasingly looking like imbeciles. The Radio Shacks around here don't sell enough computers to justify having salespeople that are ignorant of most of the commonly sold items.

Years ago I went to Montgomery Wards to buy a mattress for a child's crib. The saleswoman said that they had the item but it was too high on the shelf for her to reach and that I would need to come back some other day. I insisted that she get the manager, and eventually I got the mattress. Her inability to solve the problem independently is characteristic of the average Radio Shack employee today.

THEY DON'T CARE.

Many other businesses "Changed" themselves into oblivion. I suspect that Radio Shack is on this course. When you have a blind captain, blind first mate, and a retarded crew, the likelihood of avoiding the sinking of your ship is nil.

Guys that I work with that have no interest in Radios have complained about being assaulted by salespeople offering phones when they have gone to any of several local Radio Shacks. I suspect that it isn't odd.

The regional headquarters is associated with one of the local Radio Shacks. The rear exit of the store is into the regional offices. This store practically holds you at gun point while attempting to get you to buy a cell phone. Isn't is odd that this aggressive behavior is associated with the regional headquarters, indicating that these people are under constant scrutiny to abide by company policies. Hmm.

It's not too odd. If Radio Shack is currently not sending catalogs, why would they need the name and address. By the by, the several items that I have bought at Radio Shack since they announced their discontinuation of the name and address policy required me to give my name and address for warranty purposes.

Ironic, isn't it?

We use this system in our department. It is only used on the officer's handheld radios. The radio "squawk code" can be programmed in with whatever information you want, officer's name, badge number, etc. We use names. Our radio console has been replaced with a computer terminal which displays the officer's name on whichever channel they use.

You are correct about the emergency button, which is a small red button on the portable radio. So far I've had a few activations, luckily they were all accidental or tests.

Regardless, she is the customer and should get what she wants. I know that "the customer is always right" is an old-fashioned, outdated business practice these days, but it's not unreasonable to expect an exact replacement for a brand-new radio.

I'm not as offended by the "F" word as some people are, but I have to wonder
about someone who is proud to list people who have complained about him.

HAARP is microwave? That's a laugh. Then why are their antennas so big?
And why was I able to hear it on shortwave and confirm it with a QSL card?

HF is a long way from microwave.

RedOctober has it nailed. There just aren't enough hobbyists around
anymore to support a brick-and-mortar parts house. The only real
hobbyists in any quantity are computer guys, and they wouldn't be caught
dead in RS when all their goodies are available better and cheaper on the
internet.

RS is either going to have to change their business philosophy or die.
Right now they are doing a half-assed job of competing with CompUSA and
the like and they're not making it.

Sir, my problem with the individual had nothing to do with cell phones. It was a matter of the profanity in a family newsgroup. My 10 year old Grandson reads the various messages and I personally resent the filthy language.

It is unnecessary and simply displays a lack of vocabulary on the part of the poster.

"eS*" <eS@bredband$.net> wrote in message

If your problem is an intermittent connection, then try a B type. The
pro-93 manual calls for a C, but uses a B Type. Maybe the 95 is the
same way?

Source record: 36256

Clearing out some stuff, I have for sale a Radio Shack Pro 26. This handheld scanner covers 25MHz to 1.3 GHz, less cell frequencies, and is in excellent condition with the exception of one small nick on the side of the case. If you don't want or need trunktracking this is a great scanner, it covers military airbands not found on many scanners any more. This scanner comes with antenna, leather fitted case, 9V power supply, 4 nicad batteries and manual. I will ship by priority mail, insured, in the ConUs for $135.00. I will give a 3 day inspection period and if you are not satisfied let me know and ship it back and I will refund your money less my original shipping charge. E-mail me if you have any questions and I will answer them as soon as I can.

Thanks,
Ron

Thats what I have to do here. The codes vary by dept and are not listed
completely on agency web sites.

John

I say we've got enough laws, and enough restrictions on the people, in the US already. We don't need more.

Those who interfere with public safety are being tracked down and prosecuted. The current laws, current penalties, and current level of enforcement are working. So why add even more limitations to hobby radio equipment?

If a person uses a ham rig to transmit on a frequency he has legitimate business on, what's the harm? Most of the transmitting I have done on my Alinco DJ580T has been out of band. I worked for 11 years as a two-way tech. Like the vast majority of people who own ham equipment capable of transmitting out of band, I have never used these capabilities for malicious purposes.

Modified equipment is not a significant problem, therefore burdening the people with yet another new restriction as a "solution" is not needed.

its like i said you see yourselves as the superpower and want to control the politics and business of every other country in the worrld,in the UK you have succeeded,we have had no efective govermnent for 25 years.

Karzai was installed in Afghanistan to provide yet another government to support US business and military interests,its just Imperialism rearing its ugly head again

yesterday nearly 2 million people were demonstrating very peacefuly on the streets of London and others all over the world.

attacking Saddam Husein will make no differance to the next terrorist attack which of course may take place in the UK/US or other countries,no war has ever stopped terrorism.look at Israel and its futile attempts in Palestine,the way we stop this terrorism is first of all tell Israel to get out of the ocupied territories,tell the settlers to eiither live in peace with there neighbours who have more right to be there or get out of the country.

btw in reference to earlier attack on my intelligence from others my iq is 195 as of last Tuesday so stuff that up your backsides,it was a shock for me as well.

It's incredible that this troll is getting so much attention. You'd think people would be wise to trolls by now.

As to the original question:

Concord, California, somewhere between 1989-1992. Dispatcher: "See the woman...reports a naked white male outside her door, not well endowed".

One of the cities in west Contra Costa County, Ca. El Cerrito maybe. I'm sitting in a fast food joint. A black voice comes over the radio of a cop sitting nearby, "Your wife is on my dick".

You'll have to forgive proma1, he's a jealous little socialist that thinks it is the job
of government to make every deciscion for him. That's the role of socialism, pure
and simple.

Those who yell and scream the loudest about the US are the most jealous of us.
It is ridiculous that Europeans can't get it into their brainwashed heads that everyone
doesn't think just like them. That goes way back to when this country was settled by
Europeans. Beat it into everyone until they agree to think like them. They just never
seem to get any smarter, proma1 is a prime example. What they lack in original
thinking, they spout from pre-programmed socialist thought.

SOCIALISM DIED, get over it.

socialism died when was that????

in the next few months the socialist MPs of the Labour party who have had enough of Tony Blair will put a vote of no confidence in Tony Blair,this will mean any backing for the US will dissapear overnight.

capitlism is on its last legs,look how broke and run down the US is,unemployed,homeless,low waged you are a sad sorry pissing country,the only good thing you are worth is giving us something to laugh about.

most europeans laugh at your leaders/your politics/your crazy idas.

regards

Is it a family newsgroup? Where's a charter for this group? Post one and
maybe I'll shut up. Maybe, but probably not.

Hi. I'm still here as you can see. Those abuse reports help alot when
someones not in violation don't they?

One would think a person that is so bent on reporting someone was obessed.
Talk about issues.

The best advise for you has already been given. Either kill file me or get
Net Nanny as eS* has stated. It's that simple.

if i believe the government should make decisions for me that would make me in favour of the war,as you are the one on favour of nazi bush and blair not me.

also socialism,that acually has little to do with me being for or against the war.

in this country 13% of reservist are using get out clauses not to go and another 2% have not responded to call out papers,an ex marine friend of mine,who has just joined the Metropolitan police said to me yesterday in London,never again will he fight for the UK,he has just got back fromAfghanistan,he said if bush and blair want a war then let them go and fight themselves.

this is a common view in the UK ,the demo yesterday was sponsered by one of the biggest most popular newspapers in the UK,the Mirror.

on the march yesterday,liberals/socialists/conservative/anarchist,very racean religion,recently ex military,ex military from world war 11.

one ex paratoooper in beret and wearing his proud medals of world war 11,neve ever been on a demo in his lisfe,a common factor of yesterdays demo,but decided this as too important to miss.

i call for all UK military and americam military to disobey orders before your bodies come back in a thousand pieces and before terrorism escalates even firther with carnage and attacks on british and american interests

the audio is working fine for me now. Live365.com's server was having problems
but the audio is great.

Thanks av8tor

World War 11, sheesh! I must have missed a few. Proma1, your IQ can't really be
195!, -195 perhaps, but not +195. You are a retard!

You try the LINE IN hole instead of the MIC hole? Mine did that when
plugged into the MIC hole.

world war 11 is how we say it in the UK most of the time

11=2 in roman numerals and many things in the UK use roman numerals

every time a tv programme is made the year of make is for some unknown reason put into roman numerals

also why do you take delight in hurling personal insult,that really does show your mentality???

the good thing is my view on some americans have changed,i heard several yeaterday at the march including Jesse Jackson and indeed you have luckily had protests in the US,now that i did find amazing.

sorry but it was the first ever iq est i have ever had,cant beleive it myself,i dont rate much though on such tests,others do for some strange reason

so i can use it as a tool,but it does not really test your intelligence.

if every body went for an iq test i think it would show the results up a bit,as the tests seem really simple to me,i assumed they would be a lot harder.

paranoia. the US economy is 10 TRILLION dollars in size. if we wanted
to take someone over it would be the french or germans, not the
afghanis

but morons like 'promal' are too caught up in anti-american hatred to
think logically.

>

2,000,000 losers.

you're right. america is a rogue nation...a nation of murderers and
genocidal maniacs. i suggest you treat us like you treat others of
this ilk.

ignore us. thats what you do best.

socialism always leads to failure. inevitably. without exception.
there are no socialist democracies, no rich socialist countries, no
socialist countries which respect human rights. i'm no fan of
capitalism, but any realist knows it's the only thing that works.

>
>
>capitlism is on its last legs,look how broke and run down the US
>is

ah. broken down? it's the richest country in the world. perhaps you
can tell us what socialist country is even in the top 100.

,unemployed,homeless,low waged you are a sad sorry pissing country,the
>only good thing you are worth is giving us something to laugh about.
>
>
>most europeans laugh at your leaders/your politics/your crazy idas.

i suggest if you think the US is a rogue nation of genocidal killers,
you treat us like you do other nations like that.

ignore us. that's what you do best.

2900. Video card for Yaesu 9600...

Newsgroup: rec.radio.scanner
Date: 2003-02-16 23:58:52 UTC
From: grtpmpkin32@aol.com
Message-ID: <20030216185852.00893.00000512@mb-fp.aol.com>
Source record: 36282

Does anyone know the whereabouts of the optional NTSC video card unit for the Yaeus FRG9600? Just casting about for a lead... one person from another group offered to sell me one for $150, but my spidey-sense told me to hold off. $150 seems a bit HIGH for a video card unit I saw sell for $40 only a year ago (wish I'D bought it, but didn't have a 9600 then!) and for $50 on the ol' eBay last month. Bob Parnass reports he bought his new, years ago, for $35? Or was it $30? Anyway, just looking about!
Thanks-
Linus

K> or even be concerned about it for a wide range receive only
K> appliction. The telescopic antenna is non-resonent in virtually
K> all cases anyway.

Wait, but what if one adjusts the length to 1/2, 1/4, etc. of the band section of interest?

OK. By the way, what are the exact actions one can do with a length of wire that would emulate changing the length of a telescoping antenna---short of cutting the wire, of course.

Hmm, just folding temporarily unwanted extra length back over seems to be a valid answer:

```
_______________________________[radio]
|_______
```

What miracle properties does the ICOM R2 stock ducky 16cm antenna have over an equivalent length of speaker wire? I hear Icom's is coiled inside.

Still with my adjustable meter of wire, it seems I can do better than Icom's fixed 16cm. Say most of today I was concentrating on a certain few megahertz of bandwidth. I would fold the limp wire antenna appropriately once for hours of resonant matched listening, eh?

The real question is - what does this pissing contest have to do with scanning?
Nobody is going to win this argument so get over it and move on already or take it somewhere else. Sheesh.

2910. icom ic-r2 subaudible tones

Newsgroup: rec.radio.scanner
Date: 2003-02-17 01:52:53 UTC
From: Michael J Brown <mjbrown@pipeline.com>
Message-ID: <b2pf9k$bf8$1@slb4.atl.mindspring.net>
Source record: 36292

When I set the subaudible tones for several channels in one bank and I start scanning the bank of all channels I notice the scanner just scans without stopping at any of the locations and there is activity on these channels cause I can monitor the same freqs on another scanner. When I check the subaudible tones for the channels in questions they all seem to deafault back to 123.0. I have followed the directions in the owners manual on page 22 without any luck. What am I doing wrong?
TIA

yea i work for radio shack and our policy is to only accept names and addresses on services, checks, returns, and transactions like that. so basically if you come in and buy a piece of cable and pay by cash or credit card we won't ask for your name and address, unless you volunteer the information. the public spoke and they answered, but now we will have to be very picky on no receipt returns, so hold on to your slip, because obviously we can't just punch up your name and find it for you anymore.

It doesn't matter, they blow out their database so regularly that I was
asked for my info at least twice a year. I'm glad they stopped asking.They
couldn't even maintain their own databases for Pete's sakes.

Hi,

I bring my scanner to work with me, and some frequency's dont come in as well because I am further away from where I usualy am at. Is there a better antena that I could put on my scanner? Where could I purchase one? Thanks!

A, D E, F. G (logging operations when I get to my first of several trips to Vancouver Island this spring).

Scanner equipment is a BC780XLT and a BC245 XLT I just got them a week ago in the Arlington/Seattle region of Washington State (too complicated to try and go through mail order, and Seattle is only 3 hours from Vancouver BC anyway, so a trip down there in the morning will bring back equipment in the late afternoon.).

Haven't got into trunking just yet (got to do homework and some practice excercises on that one) , but took the portable out to YVR (airport) for the very first time. What a difference in prespective on watching the airport operations while listening in on tower and ground / Air Canada ops.

golly. so far you've named precisely

zero

socialist success stories.

you're batting 1000. a complete failure at ideology, a complete
failure in fundamentalist hatred of the west, and a complete failure
at having any moral backbone at all.

thats your socialist future at work.

Hi Rick,
The only problem was that during the rain delay there is zero Race Comms. the only thing was a few comms from the officials but that wasn't very much. During the rain delay I didn't want "dead air". If there were "dead air" new listners logging in would have thought that the live broadcast wasn't working at all. So that was why I had air traffic playing during the rain delay, just something to elimiate the "dead air".

Btw, I forgot to say "Many thanks" for all your effort, I did appreciate
it :-)

As for dead air, what I found was that Air Traffic dominated over race
traffic (volume wise, I had to turn it up to hear Race traffic, then
turn it down, then turn it up, then down...) I would have preferred to
not hear Air Traffic all all when I really wanted to hear Race traffic,
that's all. Again, many thanks for all you put into this :-) -Rick

One more thing, I heard (faintly through the Ever-so-loud ATC) that NASCAR intended to end the race (after the 2nd red flag) by sending everyone to "Victory Lane" after the (third/final restart) about an hour before "WE" (as mere mortals) heard it on TV. If I could have "Bet the Farm" on what I heard (on your site) during this "brief" interval, I would be a Freaking millionaire!!! Anyway, thanks for all your effort in making this possible and I will be there next time/year ;-) Thanks.

Me?

Nearly all 'D' (railroads).

To me, 'G' could include such things as NASCAR driver-pit crew chatter.

Yeah, I collect radios and toys and so on, and sure enough it will not cost less, or even the same, as it did when new, it will be more. But $150 just doesn't feel right, at least not before I take the best, longest look I can first. Thanks for the input-

Uhm, Sweden? Denmark? Finland? The Netherlands? Last I checked, all of these have pervasive welfare-state benefits, some government ownership of industry, and a government that is elected by its citizens. I don't know how you define democracy or socialism, but it must be very strange definition to exclude these countries.

Even the US has its socialist elements (Social Security and Medicare,government-funded education and public health/immunization programs, for example -- all good things, but unquestionably socialist in part.)

The US is not the richest country in the world in any meaningful measure. By per-capita income, or per-capita GDP, it's #9: Notice that several socialist countries are ahead. Apologies the numbers are

somewhat dated, but they should be relatively fairly unchanged.

Ranking Country Per capita GDP (1991) 1997
1. Kuwait ?
2. Switzerland 33,610
3. Japan: 26,930 42,000
4. Sweden 25,110
5. Norway 24,220
6. Finland 23,980
7. Denmark 23,700
8. Germany 23,650
9. US 22,240 27,700
10. Canada 20,440
11. France 20,360
17. UK 16,550
18. Singapore 14,210
19. Hong Kong 13,430

2949. (*) Bearcat 3000xlt WIDEBAND scanner for sale (*)

Newsgroup: rec.radio.scanner
Date: 2003-02-17 12:30:07 UTC
From: Usenet User <pkeller@mil.edu>
Message-ID: <jB44a.40647$9U3.14345@twister.nyroc.rr.com>
Source record: 36231

For sale is one Bearcat 3000xlt wideband scanner/communications receiver!
This radio is
in perfect working order! I have replaced the battery cells in the original
battery pack!
They were replaced less than 2 weeks ago and are NEW! I can prove this was
done!
See
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=14956&item=3000117095
($30 invested!)

Furthermore, I bought a NEW battery pack from radio shack! See
http://www.radioshack.com/product.asp?cookie%5Ftest=1&catalog%5Fname=CTLG&ca
tegory%5Fname=CTLG%5F004%5F009%5F001%5F000&product%5Fid=960%2D1670

Costs $60!

The radio comes COMPLETE with original rubber duckie antenna (bearcat
brand!), beltclip,
original ac charger/adapter, and the box and all paperwork - including the
original owners manual.
The backlight is bright and clear! Selling because I have WAY to many
scanners, and need to
cut down on my 5 scanner collection! I live out in the middle of nowhere,
so my scanning ability
is limited (ie small town). I don't really need a high performance scanner
like this one.

This is the US Version, so it is NOT cellular capable. It will NOT
receive transmissions in the 824-849 range!

The display seems to be scratch free, and I have added a thin plastic
protective coating
(super clear tape!) to it to protect it from any scrapes. You cannot tell
the tape is there
when looking at the display, as it is super clear!

Body had a few "dings" on hit, but overall it is in super condition! You
will not be disappointed
or bored this with radio!

RADIO HAS FULL 220-400 Mhz Military Air band coverage! Try finding that on a
"newer"
scanner on ebay....you wont!

Basic specs
Channels 400
Banks 20

Coverage 25-550 760-1300 MHz(minus cellular)
Scan 100 channels/second
Search 100/300 steps/second
Steps 5, 12.5, 25 & 50kHz (Selectable in ANY freq range, unlike other "scanners"!)
Modes AM, FM & WFM

Compare/Contrast To Radio Shack PRO-26
Both radios have
25 - 1300MHz coverage
Receive AM, FM and WFM
Search 100/300 step/sec (not 20-30 a sec like some "wideband scanners" Ie Aor, Alinco, Yeasu, Yupiteru, Icom!)
Auto-store (the radio will program itsself!)
Auto-sort (sort the freq in lowest to highest range thus making scanning MUCH faster!)
Scan/Search Delay
Search pause with stepping
Attenuator (can be selected on INDIVIDUAL channels unlike others where it is either on or off for ALL channels!)
Channel lockout
Data skip
Weather scan
Keypad lock
Keypad beep disable
Empty-channel auto-lockout
Allow receive mode change (am/nfm/wfm)
Allow step size change (you pick the step on ANY freq in ANY mode!)
50 search-skip frequencies
Backlit display
Plastic belt-clips
Low battery warning
Triple conversion (removes 99% of interference!)

The only radio close to this one is the pro-26, and it is pale in comparison!
I will let the specs below speak for themselves!

BC3000XLT
Scan 100 chan/sec
400 channels
20 banks
10 priority channels
Ni-cad battery power
Battery saver
7-day memory backup
External speaker jack
Stereo earphone jack
Supplied with AC adapter
Supplied with monaural earphone
Supplied with NiCd battery

PRO-26
Excludes 512-517MHz & cellular coverage
Scan 50 chan/sec
200 channels
10 banks
1 priority channel
AA battery(alkaline or NiCd) power
Direct search
10 monitor memories
3-day memory backup
Search-skip review/edit
Visible search limits
Monaural earphone jack

A very able performer, the BC3000XLT has been well received by the monitoring community as a whole. With 400 channels, wide coverage, three adjustable receive modes and selectable step sizes, speedy scan/search, auto-store, search lockout and good sensitivity makes it easy to see why. It's crisp and loud audio is bound to please as well as the 400 channels with auto-store to help fill them up. The display has good contrast and acceptable size but it is the backlight that is especially pleasing.

Asking $225 shipped

That's great. You probably get to see all kinds of stuff before it comes
out.
>
> >Please!! You probably liked 8 tracks and thought they sounded better
> >than cassettes!
>
> I have NO idea what you're listening to, but it SURE as hell isn't a BC250D.

I listned to a 250D at the Ft.Wayne fest, and it sounded lousy, like the
235 and 245 do. They have enough VOLUME, it's just the sound a lot of
people, like me, don't care for. Volume isn't everything, unless you are
hard of hearing, and I'm not.
>
> >> The Pro-92/3/5 series radios do NOT work on the San Diego City system.

Uhh, ok, you think there's something wrong with them a digital board
wouldn't fix to make SD listenable?? The 235/245/3000 don't work on SD
either, so there must be something wrong with them too.

>

The 2004 had lots of problems, I was lucky with mine, never any solder
problems, but I have a couple of dead ones sitting about 3 ft from me.
As bad as the 2004 was, at least the design was good,can't say the same
for the "epic" 2500/8500 disasters.
>
> >I can't even guess at how many BC100/200/205's
>
> My first BC100 was pretty good, but it was an Electra Bearcat.
>
My 205, Uniden designed and made, had the infamous false low battery
cutoff, I sent it to Uniden, and it came back with a scratch on the
display (easily fixed with Gleem and my finger, but it still pissed me
off), and the problem wasn't fixed. This took over a month. Finally, a
"homebrew" solution was found, and I, like a couple of other prople I
knew, got the dykes out, and just removed the defective components.
Simple, and the radio ran for over 10 hours with the volume low. When I
got it, it ran3 hours, at most, and I had to turn it off and back on
again and again till the battery was really dead.

> >Antenna connector not soldered, I have seen this on all Uniden handheld

This seems to be mainly a 235/245 deal, but I have fixed a bunch of
other ones, going back to the 100/200/205's. The speaker jack not being
soldered is, as far as I know or have seen, only a 235/245 issue.

>
> >Where do you think the amazing amount of refurbs Uniden sells come

>
> A pretty fair number of them come from people who don't understand
> HOW to program a simple conventional scanner, let alone a trunking scanner.

Sure some do, but if you look inside, you usually can see evidence of a
repair, and on 235/245's, a lot of them look like the speaker jack has
been soldered on, since there is flux on that area and no other on the
whole PC board. I don't know how much you open them up, but it's pretty
easy to tell whe something is resoldered on a PC board, even more so on
a modern one where most of it is surface mount.

> And those are the people who never read newsgroups, OR get frustrated by
> all the animosity and bad advice in them, and give up before they can find
> good advice and help (hint, hint).
>

And I'm giving bad advice because I give my opinion, like you do yours?? I'm telling what I have seen/heard, and it's not like I don't own Uniden scanners,I've had about a dozen over the years. I still have two, an 895, and a 9000XLT. They aren't bad, but they aren't great. They are holding up well, but thet intermod on both is annoying as hell sometimes. Right now, my 9000 has pagers mixed with a local PD. Sounds great. Since the 2004 (and that was simply QC) most GRE scanners are better performing, RF wise, then most Uniden scanners are. The 780 seems very solid, RF wise, I don't know about the 250D, it was having lots of problems in Ft.Wayne, but it's a mess in that place for any radio. I'm not the only person who thinks the 235/245/250D, etc, sound odd, you know.

Since I have no connection with either company, RS/GRE or Uniden, I can be impartial, and I have been. If I wasn't, I would be harping that nobody should buy Uniden, they are junk, junk, junk, and you'll go to hell if you do, etc. I'm just telling what I've seen/heard over the last 20 years or so of working on them as a sideline.

You might want to check out skysweep (www.skysweep.com) .

It offers a waterfall audio analysis display and about 1/2 dozen more.

Wait. I thought it would be

"Audio spectrum analyser"+"Waterfall"

I don't think it accepts 'and'....but i'm not sure. I still don't think it can accept
Boolean searches?

With alpha labels, PL/DPL tone squelch, and
computer cloning, the MS200 is quite attractive.

But, the MS200 I tested was far too susceptible to intermod
and the display quite dim.

It was plagued with intermod on VHF-low and VHF-high
bands, both at home with an outdoor antenna and installed mobile.

See my MS-200 review in March 1998 Monitoring Times magazine.
For reprint info, see:

Hi, I'm new to this group and recently bought my father in law a BC785C with the digital add on for it. He has been a long time listener in the Farmington, NH area on analog I don't know anything about this hobby. We were wondering what kind of outdoor antenna he would need for digital reception, his local police went digital six months ago. Also we can't find Police Call 2003 anywhere locally. Is there a site to order it? Or would anyone know where to get these frequencies? Do we need to know anything else about their system?
Thanks in advance,
Rick

Many of us have been writing such letters since the early 80s. People
that worked at Radio Shack would tell people at the district offices how
much people hated to be asked name and address, yet it still continued.
They obviously don't care what the customers want or say or they would
have listened decades ago.

This is also a very good point. I would never take a job as a telemarketer either. Only a certain type of person has no ethical sense in order to take jobs that require pestering people or pissing them off as part of the job description.

> Their products suck, their personnel in the

> they are doing wrong. Let them figure it out on their own. That's what top
> management gets paid for.

Again, that is a good point. How many decades of letters did they get from customers pissed off about being constantly asked for names and addresses when buying a 9v battery and they still never listened or did anything about it.

MINOR CORRECTION: The Ides of March is the 15th. Israeli
intelligence
agencies, according to THE LEON CHARNEY REPORT, have leaked that GW
Bush will attack and bomb Iraq during the first new moon of March,
which is sometime between March 1st and March 2nd. This does,
however, correspond to your 2-comet curving around the shores of our
sun at this time. The two comets will be parallel, around March
2-4th, one coming into the sun, the other heading back out towards
Jupiter. HAARP and Rosoboronexport, uuhhmmm ... in all probability
ARE IN FACT just two faces of the same secret order.

That won't work as it can not be entered into their computer. Best to just pick a zip code that is several states away. This will be entered and screw up their pie charts and bar graphs at executive donut and coffee meetings when they try to figure out how far customers are willing to travel to get to a store. The average of 800 miles with the other 2 and 3 mile zip codes will do more damage than a Canadian zip code that will just not be entered and not effect their important executive meetings and expensive large presentation charts.

Definitely C. Of course excluding Cell, and only Cordless while it was
still legal do listen to. But what is still legal to listen to on that
list still provide much more interesting listening than anything else of the
list, only because the others are sure to not say anything they don't want
anyone with scanners to hear.

> I'd say A and I'm pretty sure that's the most popular use for a scanner.
> However, I want to see if I'm wrong.

You would be. I can't listen to A if I wanted to, as it is all digitized
and encrypted for just the routine boring stuff, and anything really
important they don't say over a radio that can be listened to on a scanner
anyway.

Now with Homeland Security, soon none of you will be listening to A at all
no matter how much you want to.

Depends on what frequency band his PD is on (VHF, UHF?)

Something in that band will improve the signal strength and the bit error rate. Anything better than a 2% BER will sound very good.

Can you attach one of those television antenna's to they typical scanner? putting the proper connector on it of course? You know the kind, the amp'd uhf/vhf antenna's one can buy at most retailers that sell television's.

Would this harm it? Improve reception? Is it a totally stupid idea?

>

Not stupid at all. I've seen many articles in magazines and on the 'Net over the years extolling the (conditional) virtues of using an amplified TV antenna for scanner use.
I'd look first at your typical receiving conditions, though. If you already have any problems with overloading, intermod, or desensitization due to nearby strong FM or TV broadcasters, or cellular relays/towers, you will simply be increasing that headache by amplifying the trash with the signal.
If, on the other hand, you are in a quiet region, or don't seem to have any problems, it's worth experimenting. I have used a small Radio Shack amp'ed antenna, made for portable TVs (a thin, cigarette box-sized base and amplifier, and rabbit ear telescoping whips atop it) with a BC9000xlt, and got some impressive results... plus, it can be positioned and rotated like a dipole antenna for a certain amount of directionality.
If you think it won't add more noise or interference, give it a shot. If it's not satisfactory, you'll be out by less money than if you experimented with a larger, dedicated outdoor antenna, and you may find it improves reception on some bands (though probably not all bands your scanner receives)...
Amplified systems tend to add their own noise too, so be sure to look into that while you play around.
Linus

The "hub-bub" in the Circuit City New York area stores right now is that there will be major layoffs and some store closings in FY03. This information may already be out there for public consumption, which is why many of the more knowledgeable sales folks (and customers) are jumping ship and going on to greener pastures. Most of the managers, and hence the sales staff, have an "I don't give a damn" attitude about their stores, and are not keeping their areas well organized or stocked, nor accomodating their customers. They know the ship is going down, and most are struggling just to keep their own heads above water. Sure, you may find one or two knowledgeable or caring staff, but that is the exception and not the rule, at least here in the New York City area.

How can you say that? Maybe if people would respect their products taht
people buy from BEST Buy than the wouldn't have to enforce return rules,
which seems to be the major complaint.

Hello,

I have just purchased a pair of used RS Pro-2067 mobile scanners. I'm looking for opinions on these scanners... specificly on sensitivity, quality, intermod rejection etc etc. The one factor that made me grab these units is that these scanners can receive & track Motorola type i, ii & iii trunking, LTR and EDACS trunking...maybe more.

Most likely I'll only keep one, so if anyone is interested in purchasing the extra one I have, please contact me. This is for the scanner only - no mount. $175 or offer.

Thanks

Dave

(snip)

No, no, no, Dammit Natashya, you've gotten it all wrong! Do the simple numerology and you'll plainly see the absolute TRUTH to what's really happened:

Consider this: The cold war started in 1945, this is 2003, subtract the two numbers and you get 58. In the year 58, a nearsighted court scribe in the court of King Nebuchanezzar misentered the number of royal GOATS which cost him his life, but also a place in history. He thereafter became known as the "Al-Muzaribbi" (lit. "GOAT Loser").

This fact remained unknown until 1915 (a PRIME NUMBER!) when the great scholor Sir Robert Faulteroy III Esq. (Note, his name has 15 letters... Coincidence?) uncovered Al-Muzaribbi's unmarked tomb outside of Baghdad where his mummy and a detailed account of his "crime" was uncovered. His mummy and other artifacts were sold by the Ancient Relics Ministry of the time to the state museum in Moscow where it sat boxed up throughout the entire Revolution and the early years of Stalin's reign of terror.

Stalin, who at that time was becoming interested in antiquities and the possible secrets of the past was told of Al-Muzaribbi but because persian wasn't the native tongue to the translator he the ideograph for GOAT to be GOLD. This error inspired Stalin to begin a clandestine investigation to find the GOLD of Al-Muzaribbi (who he though had lost Nebuchanezzar's Gold).

During this time, one of the researchers doing this work was a mister Alexi Noboskirov, who despite his new bride and young son, decided to participate in the search for Al-Muzaribbi's GOLD. During his many excavations in the area he was killed by a party protocol officer for having used a four letter epithet in conjunction with STALIN's name. The Party Antiquities office, not wishing to have the murder become public instead blamed it on an "American Plot".

Years later, his son, Serge', (fuming with hatred at the American Murderers of his father so many years before) entered the State High Energy Physics

Institute and became a star pupil. He studied long and hard and easily graduated and won a position with the Soviet Ultra-secret "State Death Ray" Ministry. Lo these many years he has labored secretly on a deadly death ray with which he's vowed to humiliate the US with. Apparently he has SUCCEEDED!!!!

So! After studying the TAROT cards, conducting SEANCES and remote viewing to his deep underground laboratory, I can claim PROOF POSITIVE that the deed was done out of revenge cause by the loss of a thousand GOATS, over two thousand years ago (Strange as that may sound!) I'm sure all fair-minded and patriotic people everywhere will be outraged to learn the truth!

Case closed. Lithographed copies of this STARTLING REVELATION can be purchased for $49.95 CASH or Money order from "Al-Muzaribbi's GOATS and Stalin". Video tapes are also available as are audio tapes. Call our flash information number at 1-900-555-6766 (1-900-555-O-Poo) and learn how to be a great TAROT master like Daniel Min.

Also, don't be like Al-Muzaribbi and lose your GOLD. GOLD is a mainstay in times of trouble, war and alien invasion. You can't go wrong converting to the GOLD standard. On our website www.goldisgod.com we explain all the important facts you need to know in the rapidly growing gold market. Don't wait! Operators are standing by now!

I bought a Motorola AMPLIFIED speaker last week from a fellow who buys these (used - taken from police vehicles), gives them a once
over and sells them on eBay. Liked the speaker VERY much. I've tried it with an Icom IC-706MKIIG and BC780XLT scanner. It worked
sooo well, and you can get soooo much volume, I decided to buy another. Thought you might want to check it out:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3008526090

There are less expensive ones available but I decided to go with Barry's. He cleans them up and provides a wiring schematic showing
you how to wire them for our hobby use (these speakers have 6 or 7 wires on the cord so you NEED the schematic).

Thought I'd pass along some inf. for those interested. BTW: he has a bunch of these and puts them up periodically. Right now I only
see one but there should be more.

Vic

2999. Education Time WAS:Re: Digital Scanners @ Radio Shack

Newsgroup: rec.radio.scanner
Date: 2003-02-17 20:23:17 UTC
From: me <me@none.com>
Message-ID: <Vwb4a.54754$QU2.1471135@news2.west.cox.net>
Source record: 36182

OK kids. Gather round. This is a long post so you might wanna get comfortable.

Here's the deal on digital encryption, at least in the vast wide open southwestern deserts of Maricopa County Arizona.

Encryption is usually already included as part of the deal when you buy an APCO 25 motorola trunked system. At least ours was, and for 90 million clams it had better be included says I!

However, a caveat to encryption of the signal is that using it will reduce the reliability of the units in the field to communicate in fringe areas (a problem already inherent in most digital systems in use today).

Why this is so: Digital modulation consists of a standard carrier channel broadcasting a special sequence of one's and zeroes. On the receive end (like the one in your nifty new BC250D) these ones and zeroes are reassembled into analog speech which is then remodulated thru that tiny little speaker. This is of course an oversimplification but you get the idea.

This data comes over in packets. Each packet consists of a frame preamble, and the data. Then you'll get a postamble at the the end. This makes the data more reliable. The radio (and yes your 250 does this also) reads the preamble, uses it to calculate any error correction needed, and then processes the data bits in a special sequence ordained by the APCO 25 protocol. The postamble simply tells the receiver "I'm done."

Encryption of the digital signal is accomplished by shifting the sequence of the DATA BITS ONLY (as monitoring this system has revealed to me) This is done for security! That way you can't just set your computer up to manipulate the preamble bits into a valid preamble and eavesdrop on the comms! Nicely done Moto. But remember what I told you that preamble does? It sets up the error correction. The radios on the system guess and fill in any of the missing ones and zeroes where they ought to be, BUT, if you encrypt it will sometimes put them in the WRONG PLACES! Of course you only need error correction when an error occurs. So to reliably use your neato encryption features you have to reduce the errors to as few as possible (like 1% or less overall). You can accomplish this in two ways.

1. Saturate the HE-double hockey sticks out of your intended reception area by setting up scads of repeaters to make sure you eliminate any "dead spots". (this is what the gotsa-lotsa-money cell phone companies did).

OR

2. Limit encryption to uses that either do not require instant life saving responses or uses where the need for that is outweighed by the need to secure the communication, like detective channels working active surveillance and the like. Another practical use for encryption is on SWAT callouts, where a mobile repeater can be set up to ensure the signal is good and strong in the immediate area.

Most agencies, not being made of $$$, opt for option 2. Some however do feel the need to turn on the encryption. So for this to NOT happen in your area, scan RESPONSIBLY. This means you don't make a nuisance of yourself by chasing ambulances, tipping off suspects, etc.

-me

CW wrote:

> Sure it did some good. They have quit asking. Only took twenty years though.

But the fact that myself, and so many others (especially those customers making a purchase just before mine) have complained for decades, means our complaints had nothing to do with this, or they would have ended the policy decades ago. There must be some OTHER REAL reason they decided to stop. I would love to know what it was. I suspect it is something like this...

Some lady comes in to buy a battery. The salesperson asks for her home phone number and address. She announces it and everyone else in the store hears it as well as the salesperson. Later that night when she is alone in her home, some nut calls her and tells her to look outside her window at him in his car on his cell phone. He says he thought she looked really hot at Radio Shack today when she gave out her phone number to everyone in the store. He stalks her for weeks until she finally sues Radio Shack and they stop this stupid policy.

I suspect either this, or something else happened to make them stop, but it can't be customer complaints, because they have heard those in person, on the phone, and by letter daily for many decades and did nothing about it.

This link didn't bring it up, but I see what happened. I eventually found it, and if I were to copy the page and post it, it would end up being the same location you posted above. Just another thing Radio Shack can't do properly, design a website.

So to save others here the trouble of finding the info, I will post it this time so no one else has to go through the hell of trying to find it on their java and cookies cluttered website...

Fort Worth, Texas ï¿½ Nov. 25, 2002 ï¿½ RadioShack Corporation (NYSE: RSH) today announced it is ending the
long-standing tradition of sales associates asking customers for their names and addresses when they are checking out.

ï¿½Customers tell us the practice of asking them for names and addresses is time consuming and annoying and is not something that endears them to us,ï¿½ said Leonard Roberts, chairman and chief executive officer of RadioShack Corporation. Asking for names and addresses was a barrier to building superior customer relationships.ï¿½

Prior to its 1963 acquisition by Tandy Corporation (now RadioShack Corporation), RadioShack was collecting customer names and addresses as a way to manage its mail-order catalog business, as well as send the
in-home flyer to customers.

Look, they finally admit that is what they were taking our addresses for!!! They used to say: "Don't worry, it is not for any mailing list or anything, just so that I would not need to have my receipt if I wanted to return something. I would always point out that it would be more convenient for me, the customer, if I just held on to the receipt so they wouldn't need to take down my address, and so that no one else in the store would hear my name and address either. Besides, what if their computer lost data and couldn't find me and then I couldn't return the item because they told me I didn't need to save my receipt?

This change will not affect customers who are currently on RadioShackï¿½s list for receiving these special in-home mailings. Customers may opt out of the mailing

program at any time by calling 1-800-THE-SHACK.

I guess this means all those fake names and addresses we gave them over the years (on days we didn't feel like arguing with them) are still going to get the junk mail.

ï¿½Weï¿½re known as a convenient place to shop, because weï¿½re located in virtually every neighborhood in America, and now that convenience extends to a streamlined transaction process,ï¿½ Roberts said. ï¿½Our sales associates would much rather spend their time with customers building personal relationships to better understand their consumer electronic needs and wants and provide them with solutions. We are creating a far-superior shopping experience at RadioShack ï¿½ one we think our customers will greatly appreciate.ï¿½

Anyway, this is still too little too late. No more catalogs, still having to be asked if you want a $5 extended warranty for a $3 pillow speaker, and no longer having all their items in the stores but rather only obtainable over an impossible to navigate Java and Cookies required website, mean that Radio Shack is still going to go out of business sometime this year.

Radio Shack
1963 - 2003 R.I.P.

3005. Re: Education Time WAS:Re: Digital Scanners @ Radio Shack

Newsgroup: rec.radio.scanner

A nice story, but it just ain't so!

The part in error is in reference to the error correction of 'encrypted'
data vs unencrypted data. The error correction logic doesn't know
whether it is error correcting encrypted voice or unencrypted voice,
data is data is data, whether it is random numbers, digitized voice, or
encrypted digitized voice.

Digital systems are less reliable in low signal conditions than are
analog systems. Encryption has nothing to do with it.

Trying to trunktrack Rensselaer County New York. I think its a Johnson EDACS system.

I have put all the freqs in my scanner, but the control channel just sounds like an open carrier. So I not having any luck.

Any help???????????

> right. I wasn't sure if C or D would be next, but I guess D was.

Also keep in mind that C could be most popular, but not many would want to admit it because it would be an admission of illegal activity. This survey can not provide actual real results therefore.

Sort of like taking a survey on which of the following most here do...

A) Watching children's Disney movies all day long.
B) Hacking computer systems.
C) Using illegal drugs.
D) Masturbating to pictures on the internet.

The results of this poll would result in A as well, but would not be a very accurate poll as who would admit to doing any of the other things?

If C was not the most popular thing people bought scanners for, they wouldn't have had to cut out the cell frequencies, (since NO ONE listens to that anyway) wouldn't have had to also make it illegal years later to not listen to cordless phone calls, and people wouldn't always be posting here what scanners can get cellular and cordless phone calls. Right?

No longer a registered user... What did you do, screw someone over? Makes me feel safe about buying from you...

What about that feedback for the auction you linked to? Are you sure you rebuilt the battery pack? Apparently you don't know how?!?

I love the quotes,
Feedback you left about the batteries:
Neutral: Great product as described. NO INSTALLATION INSTRUCTIONS only draw back.
Response by pagemh - Humm How Hard can it be to unsolder 2 wires Red & White & Resolder the new pack

His feedback to you:
Neutral : Caution Sellers Buyer Needs his hand held and walked through the easy stuff
Response by pastorbrian_ny - No instructions! I was expecting install instructions with battery. Emailed 5 x

Are you sure the battery pack even works? Did you figure out how to solder those two wires?

LMFAO!

PH

P.S. Just because you can link to an actual battery pack sales site online at Rat Shack doesn't mean that you actually purchased one, nor is it proof of such...

Well I have a Pro-2067. It's fair on less busy trunked systems but certainly
not
up to par with other trunked scanners. However, it's a very good
conventional
scanner which is what I use it for almost exclusively. It is one of the few
scanners
made that will decode PL and DPL instantly, which is invaluable. The text
tags
and decent intermod and image rejection make it a winner for conventional
scanning. To me, trunking is an added bonus, albeit a mediocre bonus but I
prefer my Pro-95, 250D and 785D for trunking.

Hard to tell how popular C (on the original A-G list, not the A-D
list) really was.

There were a few well publicized incidents of cell phone listening,
and the cell phone companies found it easier to get scanner-blocking
laws passed than to explain why their service wasn't private. I think
most of the sincere "How do I unblock XYZ" posts are stimulated by the
idea that if it's forbidden it must be worthwhile.

I suspect most of the "How do I unblock XYZ" posts are from FCC/FBI
types pot-shooting for low hanging fruit.

Anyway...my scanning is primarily G. Teams and officials
communicating at a variety of auto races. Even short tracks, where
the only folks on the air are the starter and officials.

It's been a while since I've bought my last high-end scanner. It was purchased in the US and then "improved" to get better reception over the entire spectrum. I've been looking into buying another high-end scanner. Naturally, all the in US companies say "continuous coverage BUT." I don't want a scanner in which the reception cannot be "improved" and that there are no mods which could accomplish this, and don't want to rely on VFO mixing.

Ok, ordering from the UK. The UK companies all say they are "unblocked, full continuous coverage," but somewhere in the page it inevitably says something to the effect of "except US versions." This can be maddening.

Question: how do you know if the UK (or other country) scanner you are purchasing is unblocked, or REALLY unblocked? Does anyone know of any company names they could drop or have bought from? Any insight much appreciated.

Why do some people insist on being jerks?

Did you bother to READ the feedback, or are you just using this
as an apportunity to show the word you are an ass?

READ MY FEEDBACK! 170+ with NO NEGATIVE FROM
BUYERS.

I was banned for 45 days for selling a AOR 950A Scanner, pre ban
cellular capable...it is against their policies even though I BOUGHT
it from ebay...I never will get their "selective" enforcement policy.

How do you know that it will not be CONFISCATED by US Customs?
http://www.bander.com/usa/disclaimer.html

US Customers Please Read Carefully
Many countries regulate the use of radio receivers and transmitters. We have no control over the end use of products or information sold by us. Therefore, no liability is assumed for improper or illegal use. We advise you to either consult with your attorney or check with the communications authorities of your country (this would be FCC in the U.S.) for the rules and/or laws concerning the use of radio equipment. You should also check what products you are legally allowed to import or have in your possessions.

Introduction
Trust us. Our International Sales Department ships all over the world every day. Practically none of our shipments were never cofiscated nor have any problems occured. We have been in business since 1992. It's our opinion that it's pretty easy to deal with international mail-orders. It's not a big deal - the world's getting smaller. With us, you can order just like you ordered from a vendor around the corner.

Does This Apply To Your Purchase?
This statement only applies to orders made by US customers at our international sales department. NOTE: this statement does not apply to orders at our US Sales Office.

Basically, only when you are ordering of our "export" items like full coverage scanners, linears, export CB rigs and so on.

If you have any doubts contact us.

Importing "Export" Items To The US
Your purchase may be subject to duty and tax by United States Customs. Any shipments may be opened and contents may be subject to customs inspection, and illegally detected contents may be confiscated.

Importing radio receivers that cover the cellular phone frequencies or non-FCC approved CB radios to the United States is a criminal act and may be prosecuted (refer to FCC rules Part 95, 95.409).

PUBLIC NOTICE

Federal Communications Commission
1919 M St., N.W.
Washington, D.C. 20554

DA 97-1440

July 10, 1997
(Revision of February 13, 1997 edition)

MANUFACTURING ILLEGAL SCANNERS
INCLUDES SCANNER MODIFICATION

It has come to our attention that entities are offering to modify scanning receivers
(scanners) in order to receive frequencies allocated to the Domestic Public Cellular
Radio Telecommunications Service. Such modifications are not permitted under
federal law and the Commission's rules.

Scanners are radio receivers that can automatically switch between four or more
frequencies anywhere in the frequency range of 30-960 MHz. On April 19,1993, the
Commission adopted a Report and Order in ET Docket 93-1 amending Parts 2 and 15
of the FCC Rules to prohibit the manufacture and importation of scanners capable of
receiving, or readily being altered to receive, frequencies allocated to the Cellular Radio
Service. The Commission adopted these rules to implement Section 302(d) of the
Communications Act of 1934, as amended (47 U.S.C. 302 (d)).

Scanning receivers are required by Section 15.101(a) of the FCC Rules to be
certificated by the Commission. Section 15.121 states that scanning receivers, and
frequency converters designed or marketed for use with scanning receivers, must be
incapable of operating (tuning), or incapable of readily being altered by the user to
operate, within the frequency bands allocated to the Domestic Public

Cellular Radio
Telecommunications Service. Scanners that are capable of "readily being altered by
the user" include, but are not limited to scanners to which the ability to receive cellular
telephone frequencies can be added by: installing or clipping the leads of a simple
component, such as a diode, resistor and/or jumper wire; replacing a plug-in
semiconductor chip; or programming a semiconductor chip using special access codes
or an external device. Scanners and frequency converters for use with scanners, must
also be incapable of converting digital cellular frequencies to analog voice audio.
Under Section 15.37(f), the manufacture or importation of scanning receivers, and
frequency converters used with scanning receivers, that do not comply with Section
15.121 has been prohibited since April 26, 1994.

Manufacturing a scanner to receive cellular telephone frequencies is a violation of
Section 302(d) of the Communications Act (47 U.S.C. 302(d)) and Sections 15.37(f)
and 15.121 of the Rules (47 C.F.R. 15.37(f) and 15.121). The modification of
scanners on a substantial scale to receive cellular frequencies will be considered to
constitute manufacture of such equipment in violation of Section 302(d) of the
Communications Act and FCC Rules. Entities engaged in such activity are cautioned to
cease advertising and/or performing any such activity immediately.

The Commission will vigorously take enforcement action against parties found to violate
Section 302(d) and these rules. Willful or repeated violations may be subject to a
monetary forfeiture of not more than $11,000 for each violation or each day of a
continuing violation, except that the amount assessed for any continuing violation shall
not exceed a total of $82,500. See 47 U.S.C. 503(b), 47 C.F.R. 1.80(a). Further,
pursuant to 47 U.S.C 510, such devices may be seized and forfeited to the United
States. Continuing violations will be referred to the Department of Justice for possible
criminal prosecution.

Use of scanners by individuals to intercept and divulge or use beneficially wireless
telephone conversations (not just cellular conversations) without authorization is
generally prohibited by Section 705(a) of the Act, 47 U.S.C. 605(a). Administrative
forfeitures may be imposed for such violations. Violations of this provision may also be
referred to the Department of Justice for possible criminal prosecution. In addition,
Section 705(e)(4) of the Communications Act prohibits the manufacture, assembly,
modification, import, export, sale or distribution of any scanner that is intended for an
activity prohibited by Section 705(a). Violations of this provision will also be referred to
the Department of Justice for possible criminal prosecution.

Other Federal and State statutes also apply in this area. For more information
regarding the interception and divulgence of radio communications, see FCC FACT
SHEET, "Interception and Divulgence of Radio Communications," dated January 1997,
which can be obtained by calling the Public Service Division at 202-418-0200 or
accessing it on the Commission Internet web site at
http://www.fcc.gov/Consumer_Info.html/.

Additional questions concerning this notice may be addressed to Art Wall at
301-725-1585 (ext. 205), fax: (301) 344-2050, email: awall@fcc.gov.

The problem with these speakers is that they linearly amplify the noise as well as the audio. On H.F. these speakers are NG.

But not all of C is illegal. Only cell and cordless are illegal. Baby
monitors, walkie talkies, and FRS are legal to listen to.

I must say I've been pleased with the stores in Cupertino and Pleasanton, CA. Salespeople were pretty good and so was the service. Now, the service on the HP products from HP was something else... so dreadful that I won't waste your time telling you about it. My HP service problems were solved with the help of Circuit City staff. Yes, they do have ninnies on their staff, but most of the salespeople are capable. Bear in mind that I'm in Silicon Valley where a CC salesperson may have been an engineer a couple of years ago.

What they did/do basically is intermod all over the place. The 8500XLT
takes the #1 place on my list of scanner dogs. I've had some dogs
before, but nothing compared to the 8500. Uniden should have been
ashamed of themselves for ever releasing it. At least they replaced it
with decent models.

I was wondering if anyone out there would knpw about a certain type of GE radio that was mounted in a metal box on
the hump of police and fire cars and one ton trucks.

I'm looking for the model and other general details of this General Electric Radio set. I think it is GE's Mastr Exec,
but not sure as it doesn't look like any of the Mastr equipment I've seen so far on eBay.

A picture of the radio is on this page:

http://modena.intergate.ca/personal/pl8s/Radio.htm

I'm interested in any jpegs of the front cover of this radio's operator's manual, plus any close up shots that might be
available.

These radios were used within the Los Angeles County Fire Department in the mid to late 1970's alongside the Motorola
Motracs that were still in service at the time.

Thanks for your help

PK

As of the moment, the BC250D and cousin are the only two digital
capable scanners. And yes, cellular is blocked. But even if it wasn't,
the Bearcat digital ready scanners can only receive and demodulate
APCO project 25 digital transmissions, and only at 3600bps.

The digital cellular network works on a different type of digital
transmission system. That is to say, don't expect to find a digital
scanner capable of receiving and demodulating cell anytime soon, if
ever, as no scanner company in their right mind is going to go out of
their way to produce a scanner like this, at least not in the US.

Yet there are electronics stores throughout the country doing a fairly good business. If someone came out with clean, well organized, stores centering on electronics with related items like radios, scanners, shortwave, and so on (perhaps somewhat similar to early Radio Shack stores), I'm certain those stores would do just fine today.

And, of course, knowing that men are the ones most interested in electronics, moving the stores out of malls and into better traveled streets might attract less female mall shoppers and more men on their way home from work.

Thinking about buying one of these scanners but there are still some questions:

Does anybody have experience with the two and can provide input as to each?
What are your thought / opinions (pro's / con's) about the two?

Is there a better scanner in the $500 - $600 range?

The only ones left on analog is Edison Fire, but they just recently got their XTS3000 radios so it should be soon for them to change over to the trunked system and all of Edison will be digital.

Edison PD has been digital for quite some time, surprised you just noticed it.

Anyone get the feeling this has taken on a "Tastes Great", "Less Filling" style debate?

Obviously you both have very strong opinions. Neither is right, neither is wrong.

I must add, that its great that Bud has access to R&D infom from Uniden. Amazing the photos you saw.....wondering how many turned out to be vaporware. R&D can come up with plenty of ideas/concepts/prototypes, few become reality.

Seeing a photo is does not make it reality. Ever seen a picture of a Jackalope? What about the supposed picture taken from the observation deck of the World Trade Center with the plane in the background?

Even having something you can touch and feel does not guarantee authenticity. Many companies re-wrap an existing product and pitch it as the new and improved version.

Okay, guesses I have stirred the pot enough to keep this silly tug-of-war going for another few days

I dont know about all of Europe but its definitely illegal in Britain and Ireland. As is listening to ANYTHING other than CB, Amateur Radio and Marine Weather broadcasts There is a story that someone was even prosecuted for reporting to the coastguards a mayday call he heard on his scanner. Now how mad is that?

Back to the most interesting things heard, well living near London I have heard the odd bomb going off and a few nasty train crashes the last bomb was a couple of years ago now it went off literally as a cop was talking on her radio, all hell broke lose after that but luckily no one was badly hurt.

Good speakers, what do you want, a class c amp.
The only mod I have done to speakers like that was to add a circuit that would cut off the power to the amp after a 30 second quiet time.

Paul Vanasse wrote:

> The problem with these speakers is that they linearly amplify the noise as

I'm curious. If the US' goal is global domination, what is the goal of
the terrorists? It strikes me as global religious domination. If you
are a follower of their religion, you'll be OK. If you're not, you're
likely to be a victim of Holocaust II.

Do you honestly believe that life in Afghanistan is no better than the
days when the Taliban beat women and executed people who violated the
arbitrary rules of a certifiably insane "leader?"

Your post strikes me as riddled with paranoia. You support whomever
you choose. When the terrorists attempt to decimate whatever country
you live in, who will you call for help? Might I suggest France?

Rich

I personally prefer to do business with Best Buy. The prices on DVD's are
cheaper, and the service is better.

I was scanning a came across an "open" mike cordless phone. Someone had forgotten to disconnect the phone line from the last call. This turns the phone into an open mike. It didn't take me long to figure out what was going on in the background. Some lady was gettin herself off while watching a porn flick. At first I thought it was a couple, but it was evident after a while that it was just her. She got off very loudly 3 times.

joe wrote:

your iq has nothing to do with punctuation/grammar etc,i never thought i would do an iq test but,Aspergers and Dyspraxia led my specialist in giving me an iq test,and i failed on very little.

as said thats why i think its interesting to note,but dont rate much by it.

my intelligence is in as far as i have a very good recall of facts and figure,general knowledge,even on sporting subjects i do ok and i hate all sport,but for some sad reason remember certain events and facts.

i had 2 puzzles that completely foxed me,and a couple of word associations,but they were both words i had never used before.

Aspergers is a high functionin autism,so intelligence is usually average or higher,i never expected to be high,my father is 145 and was a member of MENSA,my brother who has the ablility to do anything he wants,is much higher than that,but refuses to be tested.

one thing in common is that as whole family we are opposed to this war,my brother is a leading communist in the UK.

I use the stock, and ordered a 150-174 MHZ antenna from antenna specialist
and
it worked ALOT better in that range than the stock antenna did.

On Tue, 18 Feb 2003 07:56:30 -0500, "Victor" <ke4qjk@qsl.net> wrote:

>Thinking about buying one of these scanners but there are still some questions:

Look at it like this. The reason you would want to buy the AOR AR8200MkIII would be because it is a PURE SIGNAL FINDER and demodulator. For a handheld and for the price, it has the widest reception spectrum out there (100Khz - 3 Ghz total reception range). and has every mode of demodulation possible except for digital.

If you are really into finding a very wide range of signals, the AR8200MkIII is the scanner for the job. On the other hand, if you are more interested in trunking, or receiving digital, then the AOR is probably something you wouldn't want, as it will do neither.

I use the AR8200MkIII for acquiring and monitoring signals ... but ... I ALSO have a Pro-94 for trunk tracking, and my trusty old Pro-34 for doing other neat tricks. One might say that it's hard to live by one scanner alone. At LEAST two are necessary for the serious listening enthusiast.

Thank you Natasha for the news on Pine Gap Australia, HAARP Alaska, and the Russian microwave beam weapon that is similar. Here are some interesting facts on Manitoba Canada. Are there deep throat ties?

gamma-ray lasers, or grasers

and

masers... all about HAARP and the Columbia Space Shuttle!!

This has a domino effect with the neighboring atoms: when they are struck by the photons emitted by the first atom, they also emit two photons of the same color. The result is a very pure and very intense beam of light. If the light is of a visible frequency, it is called a laser.

If it is in the microwave band of the spectrum [i.e. non-visible, like the beam that struck the Space Shuttle Columbia], it is a maser.

The term itself stands for microwave amplification by stimulation emission of radiation--which is the process just described.

You probably already know that electrons orbit the nucleus of an atom. But they cannot orbit at any arbitrary distance: there are specific shells in which they must dwell. The shells are like the rungs of a ladder: you may step on any rung you choose, but you can't step between them.

Electrons can move among the shells, but they must have a hall pass to do so. To get a hall pass, an electron must intercept a photon (a packet of light energy) of exactly the right frequency (or color). The photon gives the electron a boost of energy, allowing it to jump up to a higher shell. If the electron should later fall back down to its original shell, it will release a photon of precisely the same frequency.

There are situations where many atoms have electrons which have been boosted to the same energy level. We say those atoms have been pumped. You could also think of it as being primed--they're ready for something interesting to happen. That something occurs when another photon hits an atom which has been pumped. This gives the atom another boost of energy which it doesn't quite know what to do with--considering it has already been pumped by another encounter. So, it emits two of the same kind of photons--one is the incoming, or incident, photon; the other is of the same type that pumped the atom

in the beginning.

HAARP: This has a domino effect with the neighboring atoms: when they are struck by the photons emitted by the first atom, they also emit two photons of the same color. The result is a very pure and very intense beam of light. If the light is of a visible frequency, it is called a laser.

If it is in the microwave band of the spectrum [i.e. non-visible, like the beam that struck the Space Shuttle Columbia], it is a maser.

The term itself stands for microwave amplification by stimulation emission of radiation--which is the process just described.

Manitoba's Aerospace Industry

Manitoba's Infrastructure
Manitoba Aerospace Firms

Company Principal / Position Work Phone

MAGELLAN AEROSPACE CORPORATION ï¿½ MANITOBA CANADA -- BRISTOL AEROSPACE LIMITED

Design

Bristol's diverse manufacturing capabilities are enhanced by having a strong engineering group on staff to participate in design and build and simultaneous engineering programs.

Bristol's engineers are equipped with the latest design tools including Catia, Unigraphics CAD/CAM complete with 3D solids modeling, MSC Nastran, Aerodynamic, Computational Fluid Dynamics, and Heat Transfer Modeling. These activities are supported by a research and development program which keeps Bristol in step with technological advances.

Whether the requirements are for "clean sheet design" to customer specifications or re-design for product improvement, Bristol has the design experience and resources.

Forming

The forming and blanking capabilities include brakes, stretch presses, rubber forming presses, drop hammer, horn presses, bulge presses and NC turret punches. These range from 15 tons to 3750 tons.

Welding

Bristol's welding capabilities include conventional arc, tungsten inert gas, resistance - spot/continuous seam and electron beam. Bristol's welding capabilities include expertise with materials such as titanium, zirconium, super alloys - nickel and cobalt, aluminum, high strength and stainless steels.

Brazing

The Company performs vacuum and induction brazing including the highly specialized brazing of honeycomb panels.

Machining

Complete with 5-axis milling centres, horizontal and vertical CNC lathes, electrical discharge and conventional machine equipment, Bristol offers one of the most comprehensive machining facilities in North America.

Heat Treat

Bristol features a complete range of furnaces to heat treat, anneal, normalize, stress relieve and age all types of aerospace alloys.

Coating and Chemical Processing

Capabilities include chromic, sulphuric, and phosphoric acid anodizing as well as the application of dry film lube.

Composites

Bristol has developed extensive expertise in the manufacture of components using both composites and metal-to-metal bonding.

Graphite, Kevlar, fibreglass and various core materials are used to produce lightweight, durable composite components. Bristol's 71,600 square foot, state-of-the-art Composite Manufacturing Centre features 3-axis high speed CNC trimming, 5-axis CNC gantry trimming, CNC cloth cutting, CNC core cutting, freezer facilities, paint room, autoclaves, and a spacious clean room.

Bristol also has experience in advanced metal-to-metal bonding. This expertise involves components such as structural panels, engine ducting and flight control surfaces.

I have been using the "Scanner Recorder v1.8.1" program for a few days now and really like it. Does anyone know if it has the ability to record .MP3 files? I am tired of converting the .WAV files into .MP3 files for archiving.

Thanks In Advance,
BTJustice

You do NOT need to convert it if you have the MP3 codecs installed.
Record it using the mp3 codec in the file types when you open a file
you want to capture the audio to. The program will save it as
a WAV file on your hard drive no matter what codec you choose,
just rename it AFTER you stop recording from a .wav file
to a .mpe file. That's it, no re-encoding....

Hope that helps. I know it works that way for me!

God bless!

I heard that is not suppose to work. You are just simply renaming the file type. It is still the same size file no matter what.

Consider http://www.antennawarehouse.com

They have a scanner antenna that will do the job for a variety of frequencies.
Especially the one that the 785 covers. I have one and it works great.

It does work. When I load it into winamp it is recognized as a MP3 file
with mp3 headers. If it was a WAV file it would not have the mp3
headers.

Also, when it is loaded into nero editor, it is also a mp3 file.

Ps - "it" is the recorded file.

God bless

3106. Historic B&O RR Roundouse Roof collapse

Newsgroup: rec.radio.scanner
Date: 2003-02-19 02:08:53 UTC
From: Ken <kfraz3322@yahoo.com>
Message-ID: <3e52e73f@snipnews.snip.net>
Source record: 36088
Cross-posted to: aus.rail,fj.rec.rail.historical,rec.models.railroad,rec.radio.scanner,uk.railway

Found this in another NG - thought it may be of interest
to railfans and rail scanner enthusiasts.......

http://www.sunspot.net/news/weather/bal-te.md.museum18feb18,0,2922838.story?
coll=bal%2Dhome%2Dheadlines

http://www.velarium.com/amitchell/index.html

The roof fell in on (US) railroad history yesterday....

The landmark 1884 roundhouse - the center of the B&O Railroad Museum
complex a few blocks west of Baltimore's Inner Harbor and one of the
shrines of American railroading - lost half its roof under the weight
of the weekend's snowfall.

The collapse created a gaping hole in the signature building and alarm
about possible damage to the historic trains housed there. The damage
also caused the indefinite closure of the museum, which attracts
160,000 visitors a year and boasts one of the most significant
collection of railroad treasures in the world at a site billed as the
birthplace of American railroading.

"I've already cried a thousand tears," said Courtney B. Wilson, the
B&O's executive director, as he stood beside the locked gate to the
museum's compound. He said portions of the roof first caved in shortly
after midnight yesterday and again a few hours later.

Railroad buffs shared Wilson's grief.

Herbert H. Harwood, a retired CSX executive and nationally known
railroad historian and author, called the roundhouse "incomparable."

"It is truly a cathedral of transportation," said Harwood, who
described it as "the largest circular industrial building in the world
... it really is symbolic of the late 19th century in that it's
optimistic, looking forward and upward."

Only a fool would send $50,000 to purchase anything through an
internet auction.

I have sold and purchased HUNDREDS of items on eBay withOUT any
problems. The internet has opened the door for me to sell items that
are in demand all over the world, of which I could have never have
sold locally. A great number of my customers have been from OUTSIDE
the US, yet they have NO problem sending me their money. This is true
even with my website. The number of dishonest sellers on eBay is TINY
compared to the honest sellers.

I guess I don't have a .MP3 codec installed because I can't rename it the file extension. It would be so much easier if the program would record .MP3 files.

I must agree, the Yupiteru MVT-7100 is a great radio. I've had one for around 10 years and it's still going strong. A little duct tape to hold the battery door on but otherwise it's stood the test of time with over 350K miles on it. Travels with me everywhere I go. I'd like to buy another just for backup.

I am looking at buying a handheld scanner. One with all the bells and whistles. When I read the specs. on some of the various brands I wonder which specifications actually mean "good scanner" or "not so good scanner". Is sensitivity one of the more critical specs and if so, is there a noticeable difference in performance between, lets say a 0.5 and a 1.5 at 10 db? The area I am in is low, a river bottom, so reception is a concern. Is sensitivity the spec that I should look at or is there others more important? Thanks for any advise.

You need to be a bit more specific. What in particular are you interested in? I have 3 scanners, a pro-95 for trunking monitoring, an AOR 2002 for military air, and a Yupiteru MVT-7100 for additional military air and listening to short-wave and hambands. Both the "Yupi"and the pro-95 go on the road with me when I take a trip.

One needs to pick a scanner that dos the best job for their area of interest.

A dipole - for optimal RX, the antenna should be tuned for the frequency.
The proper legnth of the antenna for .518 MHz - end to end would be 903.47ft
o which also calculates out to 451.735 per leg of the dipole. BUT - most
likely you don't have that big of a yard Soooooo just go with a 40m or an
80m dipole that you can purchase for $20 at yer local Ham radio shop.

hehehe

good one Tom! But REALLY, these AMPLIFIED speakers are nice! I've got one apart right now and installing my own red and black zip
cord (7'). For the money, I just cannot say enough good. In fact last night I was on a radio amateur 'rag chew / traders net'. I
mentioned the speakers there too. They are GREAT for HAM operators who do public service work in shelters. I've been in shelters
(this is Florida - HURRICANE threats send people into shelters) and they can be quite noisy. They can be helpful at EOC radio rooms
as well ... if you want VOLUME for what you're listening to this speaker will do it.

For you skeptics, check out the feedback from buyers of Barry's speakers. The feedback speaks for itself!

Thank you for your response.
I would like to get a unit that has all the commercial broadcast bands (TV, FM, AM), short-wave, military and of course emergency broadcast bands. I was reading about the ICOM r10, the Alinco DJ 2000 and the AOR 8200 MKIII. These seem to have the ranges I want. Because they are quite pricey, I wanted to learn more about what makes one better than the other.

Source record: 36002

Depends on how much you want to spend, and how much space you have.

Cheapest is a long, long wire. Or a long dipole.

More expensive and more compact would be a tunable loop antenna. Most of the online scanner/radio dealers will list and describe these. If you are handy, you could build one. The ARRL Radio Amateurs Handbook and/or ARRL Antenna Book describe details and construction help.

Radio Shack sells a tunable AM loop antenna (cat no. 15-1853) for the broadcast band which works well. It is rated at 535-1700 kHz, but may tune down to 518 kHz. (At least they sold one last year! Looked just now and couldn't find it on the RS web page! Now, if they only had a real catalog. . .).

An active antenna will also work well in this range. Again, check the online dealers.

I don't know what model these speakers are that he sells, but I bought two amplified Motorola speakers brand new on ebay, and I love mine. Mine are only 6 watt amplified (2 ohm) speakers, but seem to be as loud as any on the market. I use one for my scanner, and the other I have not used yet. They are both model HSN-1005A. For some reason, I got the HSN1000A instruction manual and the wiring diagram with my speaker (I just noticed it now, and I have had them for over a year now!) Nonetheless, the wiring diagram works for the 1000A seems to work okay with the 1005A speaker. You can't go wrong with one of these speakers.

Hi DB
Among others, i have a portable Sony SW55 that has been sitting on the shelf for about 5 yrs. I don't know why i bought it at the time as i had and still have others. Just a gadget freak i guess. In those days i was in good shape financialy. I never did listen to much shortwave altho i am a ham. I doubt if it has a months use on it. It sold for about $300 or $350 at discount from AES and has all the bells and whistles. I have no use for it and would use the money to buy a scanner. I'll sell it for a $150 firm plus shipping via Florida. If interested i will go thru the manual and give you all the important specs. and will also check it out. Like new and a fine receiver. Can't send you a ipic as my video circuit is blown -- AL
PS: Send any replies to ALMINS1@webtv.net as i'm using a friends webtv unit.
PPS: Your addy was ng

I have a DJX-2000E and the only problem it was a little hard to understand
on how to operate it, but with that now history. It's a great scanner and
would recommend it.
Had the DJX-10E before

Im very interested in buying a scanner, but unfortunately don't know where to start. What are some of the best scanners to use? Make, Model etc... I would like a scanner that picks up Everything! my price range is about ï¿½800 but would stretch to ï¿½1000 if necesary.
Thanks for your help ;)

3129. FS - Pro93, GRE Amp & Other items

Newsgroup: rec.radio.scanner

I'm saving up to buy my first Ham Rig, so the following must go!
1) Pro-93, data cable and 2 sets of NiMH batteries. Unit is V1.0 but I can include the original Receipt dated in 8/2002 so you can have it upgraded. $125

2) GRE Super Amp (Base Model). Hardly used. $50

3) Scanner Master pocket guides for NY & Phila. 1990 Vintage Editions. $20 for both.

4) Stealth Scanner antenna. $25

5) BP120 Uniden 235/245 battery (new) $20

Paypal or M.O. accepted and all items include U.S. shipping. Will take best offer on all items.

I can send you the MP3 codec via email if you would like.
After it is installed, start the Scan Rec program.
Hit the open button at the bottom left corner of the program,
the pick a filename, for example scanner.wav

Then the next window will ask you for the scanner compression format.
Use the tiny arrow to select MP3 format.
Then select whatever compression you want. I usually
use 20kb by 11hz mono. That will give me like 4000 HOURS
or recording. When you are done recording, hit the
close button. End the program, then simply RENAME
scanner.wav to scanner.mp3 and you are DONE!

God bless

518 Khz is the main world wide NAVTEX frequency. NAVTEX is short for
NAVigational TEXt. It's used to send text messages to ships which are
primarily at sea. Bouy reports, Wx conditions and others things of
interest to ships. NAVTEX can be decoded with your soundcard hooked up to
a short wave radio which tunes this frequency. I've even seen reports when
the marines at Camp Pendleton are having training exercises. NAVTEX is
primarily recieved near the coast.

The reason people are reacting the way they are is while you might just be an enthusiastic buyer, you are acting like a seller who is pretending to be someone else to tout his auction.

You're posting with a fake email address.

You're gushing about the product.

Your comments seem to be encouraging a bidding war.

You also mention you're in Florida. So is the seller.

Hmmmmmm 1/4 wave verticals are known for their broad bandwidth? I am
scratching my head. How wide would this bandwidth be at say 7mhz?
Seems to me that it is no more than 100khz. Could it be then that the
bandwidth of the 1/4 wave vertical is a function of some other
parameters other than the 1/4 wave ant design? Maybe design frequency
vs element dimensions? Wouldn't a 1/2 wave vertical or horizontal
element be similar in bandwidth?

Not flaming. Just bringing up a possible discrepancy in ideas.

If you are recording the file as an MP3 file, and you are able to choose the name of the file, why not just give it the MP3 extension right off the bat? If it has one of those drop-down format windows to choose the file extension from, and MP3 is not one of the choices, just leave it as it is then and add the .MP3 extension to the file name. It will save the file with whatever extension you added in the name field... This works in the file boxes in many programs that I use.

Note: I have never used the software you are speaking of, so this may not work with it, but give it a try anyway and see what happens... It just might work..

>

In the past I've used a random wire which worked well. Right now, though, I'm using an 80 meter dipole and I can't tell any difference in the received signal. I regularly hear NAVTEX sigals every night on it and I'm in the middle of the country.

I've used my 30 foot 80-meter vertical antenna which worked quite well. Now
I use my 80 meter dipole with excellent results.

You can get a brand new Uniden BC60XLT for $79.99 at Wal-Mart. Or you can get the same one used from www.uniden.com for $49.

Myself, I would spend the extra $20 and get the BC80XLT from Wal-Mart for $99.

Okaaaaaaaay...

I could be wrong - it's happened before. I'll bite...

When the sheriff got the keys to his shiny new trunked system he (from what I hear from an anonymous source in their radio room) ordered the whole thing be encrypted immediately. He was forced to rescind that order a few days later because the dispatchers were only getting about 60% of the comm's, and it almost resulted in the death of a deputy due to being unable to request backup during a shootout. The deputies threatened to walk off the job if something didn't change. He opened the system and now it's about 98% reliable.

I remember reading this in a news article also, but now I can't find it. I'll post a link here later if I do.

Anyhow, if the frame packets can compensate for encryption as you say (which does make a certain degree of sense) why did the system fail under encryption, yet work in the clear?

Hmmm.

Leads me to ask WTF your gripe is then, since Unidens sloppy QC methods make you so much money.

Naah, if that were really true you'd keep your mouth shut and enjoy it.

My Uniden scanners have been excellent over the years (I have, at last count, 9 of them) Only problem I have had so far was the light finally burned out in my 895 after 4+ years of near continuous use.

Guess I'm just lucky, huh? (yeah right...)

do a search on BBC website for Stephen Wey

you will find a couple of letters to the BBC from him

as well as bits on me as well.

i am not a communist,i am a socialist,there are more socialists in Europe generally,in the UK unfortunaetely the Liberal Democrats are actually now more socialist than the labour party.

i dont believe that voting does any good though,people have to use direct action to get what they want,governments of any sort rarely follow the wishes of the people.

at least though in the UK we do stil have reasonable politics based on democracy,in the US you only get anywhere if you are or have backing of multi millionares,what sort of democracy is that.

you will never get someone who is from a normal working class background and have knowledge of working class issues,i find that really sad and i really do pity you.

third world USA,the only thing your government really spends money on is the armed forces and you think its worth it,that is well sad.

never mind we will teach you.

That's assuming they do it at once. I usually only monitor one or two at a time but travel pretty frequently around my state and California also. Being able to stuff all that into one scanner program would be great, and if the 250D had an option to go to 20x50 that would be perfect!

>
> B) To add more banks, you'd need to add more buttons,
> making the radio even bigger.

Not necessarily. I'd be fine with an A or B option in the menu that would scan banks 1-10 or 11-20 exclusively. Another setting could let the user decide if they want 2 10x50 layouts or one 10x100 layout. No extra buttons required - just updated firmware.

How bout it Uniden? for the 96K model! pleeeeeeeze???? ;-)

the fact is the live of the Afghan has been proved by human rights and aid organisations not to bemuch better than when under Taleban control

btw the only place where some things have improved is Kabul itself an even there women are being put in prison still for adultery.

Karzai was installed by the US to support the oil pipeline and any other future business interests the USA will stick its dirty fingers into.

in the old days a whole country would be overun by a foreign government and army,now imperialism is done by other means,ie you install a leader who supports your culture and business,and destabilise any that dont.

the USA have a long history of this

Karazai was working for the company involved in the US oil pipeline project and surprise/surprise now he is president,that stinks.

if human rights was a consideation wha about all the other countries that abuse human rights and ignore UN resolutions,Amnesty International and other pressure groups have campaigned for years with no one listening.

as for WMD funny CND has also been campaigning for years on these vile weapons and now you are against them[or rather some countries dictated by the US cant have them]

as for space researxh i meant to say manned space research,is a vast waste of money and resources,most things nowadays can be done remotely and thats where space research should stay.

3169. AOR SA7000 Wide-Band Antenna?

Newsgroup: rec.radio.scanner
Date: 2003-02-20 03:15:20 UTC
From: Bill Crocker <wcrocker007@comcast.net>
Message-ID: <C_ydnZgSV_bS1cmjXTWc3A@comcast.com>
Source record: 35952

I recently purchased an Icom PCR-1000 wide-band, computer controlled,
receiver.

I'm considering AOR's SA7000 wide-band antenna. Looking at the
specifications, it's impressive! Looking at the price, is depressing.
$200.00 seems high, from looking at it. Anyone have some real-life
experience using this antenna?

Thanks,
Bill Crocker

3170. Create Log-Periodic 5130-2N Antenna?

>digital, so what's the point?

I would not advise listening to cell phones of ANY type. It is
illegal.

Some people have to listen to signals from low-power test devices
(under 10mW) that are in the cellular ranges, but which aren't cell
phones.

Some of these low-power test devices transmit digital signals in the
cell phone band.

In order to receive these transmissions you have to be a legal,
qualified, licensed tech and know how to go through the process of
turning a cell phone into a cell scanner.

YOU MUST BE LEAGALLY QUALIFIED TO WORK ON CELL PHONES.

A digital cell phone is a digital receiver... (light bulbs are going
off in the room)... capable of receiving and demodulating all of the
frequencies that digital cell phones use, as they naturally do this
all the time anyway (at least cell phones in that particular service
and transmission scheme). All of the necessary equipment and
components for reception are contained right there within that stupid,
little, worthless cell phone sitting right on top of your desk. A
digital cell phone normally monitors a cc frequency from the closest
cell in low-power or "standby" mode, waiting for its unique ESN/MIN
pair to kick off the ringtone. This will not be the case here. One
circumvents and utilizes some of the front-end, keeping the phone
continuously on, and controls the cell phone processor to "scroll"
(scan) through all the different cell downlink frequencies. This will
NOT work if your low-power test device is CDMA.

DO *NOT* LISTEN TO CELL PHONES! IT IS ILLEGAL!
DO *NOT* LISTEN TO CELL PHONES! IT IS ILLEGAL!

Bill,
I have one and as far as mechanically goes it is a work of art!
Excellent construction. I've had mine about 8 months but it hasn't seen
much wind, only a couple gusts of about 60 mph and still looks like now.

As far as its quality has a good antenna I think they are way over
priced! Sorry but I have an Antenna Warehouse Scanner Beam which I
bought new for less than $60.00 and paid $300 for my Create. Its very
hard to tell the difference between the two antennas as far as picking
up weak signals. The only band I spend lots of time monitoring is the
225-400 and 138-144 (MilAir bands) so I can't speak much for other bands
(except 900MHz). But the performance in the two Mil bands is nearly the
same. Now if you're wanting to receive the 900 MHz band the Create
doesn't do well at all! Example, I can pickup the Orlando, FL trunk
system on the Scanner Beam, the Create can't pickup it up. The Orlando
system is about 60 miles away.

So I have mixed feelings about the Create. By far its better built then
the ScannerBeam and should be able to withstand much higher winds.
However for its receive ability I don't think its any better in picking
up the weak signals. I will say the Create is more directional however
its forward gain isn't much greater... You can see pictures of mine at
http://www.MilAirComms.com/shack.html

OK, I promise to cut back on my cell phone listening from 1 hour a day, to 45 minutes. We all must do our part to abide by the law as much as possible. And if I just happen to come across details of a terrorist plot on a cell phone, I'll keep my mouth shut because I wasn't supposed to listen to it in the first place.

3184. Yaesu VR-120 Antenna?

Newsgroup: rec.radio.scanner
Date: 2003-02-20 11:14:08 UTC
From: rljames <me@home.org>
Message-ID: <3e54ba53$1@news.netacc.net>
Source record: 35968

As I wait for the arrival of my new VR-120 it occurs to me that the stock antenna size will probably defeat some of the radios portability advantage. For instance, I plan on putting the VR in an upper arm band pouch and use with earbuds while hiking. Is there a "better" (smaller) antenna that would provide good performance? Maybe something flexible that can be manipulated out of the way? Or even a "stubby" that actually works?

Thanx,
Bob

Source record: 35971

Bob Parnass recommended to me the Pryme RD-9. I use
the stock antenna and it works great, and is NOT
the much bigger than other scanner antennas. I tried
my Pro-93 antenna on the Yaesu, and it picked up
WORSE then the Yaesu antenna did.

I also made a long wire antenna to use when listening
to weak shortwave signals. It made a HUGE difference.
Get an adapter at radio shack for bnc to phono,
then get some phono plugs and solder some wire
to the phono plug, attach to the bnc to phono
adapter, and be amazed at how well your radio
now works on shortwave!

God bless!

Folks,

I wonder if anyone here who regularly scans the US military aero VHF bands could recommend brands of older hand-held scanners that cover these 225 - 400 Mhz frequencies?

Thanks.

Here's a start for hand helds:

Radio Shack/Realistic
Pro-26
Pro-43
Pro-60

Uniden Bearcat
BC3000XLT
BC250D

Icom
IC-R1
IC-R2
IC-R3
IC-R5
IC-R10

Alinco
DJ-X2
DJ-X3
DJ-X10
DJ-X2000

AOR
AR-16
AR-1000 (I think)
AR-8000
AR-8200

Yaesu
VR-120
VR-500

Yupiteru
MVT-7100
MVT-7300
MVT-9000

Commtel
Com 206
Com 207
Com 216

Sportys JD-100 Air-Scan (civilian and military air band only)

Camnis HSC-200

Maycom AR-108

Who did I overlook??

Jon

What you do with your scanner is completely your business. If I'm reading you right, and if you are responding to my response (nobody quoted anything) you seem to think I was telling you what you should or shouldn't do with your scanner. That is not the case at all.

Some people have been talking about the desire and ability (or lack thereof) to listen to digital cell transmissions. In light of that, perhaps you did not fully grasp the ramifications of what I was telling you in my last response.

As for the software check out scanpro, I have it and think it is pretty
slick to use.

Here's some help:

The trunkeradio.net has lately been posting what I can only describe as
misinformation concerning trunked systems in NJ... If you're located in
the Ocean/Mommouth/Burlington County area, I know of a LTR system you
might want to take a shot at monitoring...

But there's no cell phone conversations to listen to anymore since they're all
digital, so if the government tells you that you can't listen to them, does it
really matter since there's nothing to listen to in the first place?!

The Icom IC R2 will cover the Mil Com UHF band and
with selectable mode the radio will work either AM or FM
in the upper VHF AIR band, used by the worlds military 138 MHZ to 144
MHZ
in the correct AM mode.
May bases use 138 to 144 for land mobile base ops
in FM. Lots of radios will cover 138 to 144 Mhz but only in FM!
A air show demonstration team fly's with this band- VHF, so AM is a
must!
Along with 220 to 400 MHZ AM.

If you attend air shows the R2 computer programming is great, to
build
files for each of the different shows. There will br four (4) here in

New England this summer. Geography spread out, each show requiring a
different
load out to the Icom IC R-2. I keep files for the shows on floppy disk
then only have to add
several new freqs form the internet or gleaned form Monitoring Time's
March issue, that lists
the up coming air shows and has the latest frequencies for the show
teams!
check them out at:<http://www.grove-ent.com/> There is a "bargain bin"
on the site
check out the great used scanners! And they post last years air show
freqs!

The PRO - 43 by Radio Shack also covers UHF Mil coms 220 MHZ to 400 MHZ.

Check out <http://www.strongsignals.net> for more info and place a "want
to buy"
ad on the classified message board, you may even find a used radio
posted

Source record: 35904

Welp, folks, got my 785 all set up and tracking just loads of stuff my old 2052 wouldn't - most of you are probably accustomed to the abilities offered by the 780 and the 785 in most ways isn't all that different...

Something I wanted to ask the group tho...

if you program ONE bank with trunk freqs, you can associate only ONE bank of 100 talkgroups =period= , yes? So if you wanted to monitor more than 100 talkgroups on the SAME set of freqs, you'd have to program another entire bank with the same freqs as the first, then use its associated block of 100 tgids seperately...

Seattle appears to rebroadcast everything within a 20 or so mile radius off a tower very near me, literally hundreds of TGIDs come up

odd, too, that Seattle PD don't seem to stick to their beat layout all the time, North units show up on West TGIDs, etc...

Like all really fun stuff, this 780/785 is easy enuff to start up, but challenging to get right

thanx!

=US=

True, but please understand that the majority of French wanted it that way. We've somehow built this myth in which Hitler seized control od Germany in some kind of coup then used it's huge modern army to beat down stiff French resistance. Truth is Hitler was elected by a majority of Germans, and that France had a far stronger army but gave up essentially without a fight. Only a brave few went into exile with DeGaul or stayed behind to resist and even they despised the US and Britian for sinking the fleet promised to Hitler.

from newsletter of jimrarey@comcast.net

DOE's Sandia lab located at Kirtland Air Force Base, New Mexico, is
in the forefront of directed energy research and experimentation.

It has a 23000 square meter building that houses the world's most
powerful gamma simulator.

It is capable of generating extremely short bursts of an electron beam
of 13 trillion watts.

It is used primarily for simulating the effects of prompt radiation
from a nuclear burst on electronics and complete military systems. The
contractor managing the Sandia lab is Lockheed Martin.

The Air Force operates 14 space weapons programs in space, and at
least two ground based platforms including Sandia and the HAARP
installation in Alaska masquerading as a scientific examination into
the effects of high auroral activity on the ionosphere.

Columbia Investigation Controversies
Medium Rare
By Jim Rarey
2-20-3

If the conclusion in the Columbia tragedy is not controversial, the
investigators themselves will more than make up for it. What with NASA
spokespersons contradicting each other, theories being put forth, then

dismissed only to be postulated again and finally admitting to the obvious,
if the public isn't confused, they aren't paying attention. And this doesn't
even involve the so-called ï¿½independent ï¿½ panel appointed by NASA Administrator Sean O'Keefe.

Early on the first hypothesis was that tiles had come off that were damaged on takeoff. Then, that was dismissed since that had been investigated a day or two after liftoff, using projections and simulations.
A few days later that theory was put back on the table since no better theory arose. That is, no theory they were willing to consider.

Two photographs, one taken in California and the other in Nevada, showed the shuttle being hit by significant electrical discharges of some
kind. NASA's first reaction to the California picture was that something may
have been wrong with the camera or it was jiggled (although on a tripod)
when the photo was snapped accounting for the lightning-like streak that
appeared to hit the Columbia.

However that theory died when the camera manufacturer tested 1.000 identical cameras (which were digital contrary to initial reports, thus not
requiring film to be developed) and could not duplicate the phenomenon.

That was before the Nevada photograph surfaced. Then the theory was advanced that the bolt of electricity could have been a ï¿½Pixieï¿½ a fairly
common phenomenon where, in certain weather conditions, electrical discharges jump from clouds to the Ionosphere and vice versa.

That was immediately discounted by outside scientists and meteorologists (who are also scientists, before I get any hate mail) pointing out that there were no clouds or adverse weather conditions at that
time. NASA has on several occasions delayed shuttle re-entry to avoid storm
conditions. Since then, NASA and the media have been doing their best to
ignore both images.

Then NASA officials pointed to the fact that, up until then, no debris had been found west of Texas, which didn't support the eyewitness who
said he saw pieces breaking off the shuttle over California.

However, yesterday (Wednesday) NASA finally admitted the obvious.
The shuttle started to break up over California. Of course any first
year
physics student, or even common sense, would tell one that pieces
coming off
an object traveling at 21 time the speed of sound at an altitude of
more
than 43 miles, would not touch down anywhere near where they came off.
NASA
also pledged that any further information would be released through
the
ï¿½independentï¿½ panel.

The NASA charter for the panel has already been revised three times
in incremental efforts to give the perception of independence from
NASA.
NASA Administrator Sean O'Keefe has made all the appointments. In this
writer's article of Feb. 8, it was pretty much established that the
panel,
as it was constituted then, was loaded with military brass with
connections
to the Air Force directed energy weapons programs.

It has been acknowledged that one of the experiments carried out on
the Columbia was the release of two miniature satellites into space
from the
shuttle. Called ï¿½picosatellitesï¿½ developed by defense contractor The
Aerospace Corporation and funded by DARPA, they are the precursors of
inspector satellites to spy on other full-size satellites.

A local sheriff in Texas has reported some of the shuttle debris
recovered is radioactive. So far there has been no confirmation or
denial
from NASA. One science writer claims an experimental night vision
multi-spectral telescope that was powered by a new isotope used in
nuclear
power named Americium ï¿½242 was used in the Columbia's orbiting around
the
earth to evaluate vapors in Iraq evidencing night-time disposal of
chemical
weapons material.

The panel has a momentous task to sort everything out and didn't
really need the unnecessary controversies it has brought on itself (or
been
visited on it by O'Keefe's appointments).

For starters, a NASA spokesperson said O'Keefe appointed the panel
the day after the Columbia crash. However, O'Keefe later told the
press that
the panel was in place before the Columbia tragedy as part of a
contingency
plan following the Challenger disaster.

Two appointments made over the weekend have stirred the pot. The first, Sheila E. Widnall, a MIT professor seemed innocuous enough although she is also a former Air Force Secretary in the Clinton administration. We now find that she also was a paid consultant to the Boeing Corporation. Boeing and its joint venture partner Lockheed Martin in United Space Alliance manage both the space station and shuttle programs. The joint venture is shielded from liability in the tragedy as NASA has indemnified it.

MIT and a spinoff (MITRE) are very much involved with the military space program. Widnall has been joined on the MIT faculty by John Deutch, former Director of the CIA and a Director of the Council on Foreign Relations (CFR) and CitiGroup.

In 1959, MIT spun off its Lincoln Laboratory as a private company and renamed it MITRE. Its first Chairman of the Board of Trustees was H. Rowan Gaither.

"In the fall of 1953, Norman Dodd, Director of Research for the Reece Committee, was invited to the headquarters of the Ford Foundation by its president, H. Rowan Gaither (CFR).

According to Dodd, Gaither told him: "Mr. Dodd, all of us here at the policy-making level have had experience, either in O.S.S. or the European Economic Administration, with directives from the White House. We operate under those directives here. Would you like to know what those directives are?" Dodd replied that he would. Gaither said: "The substance of them is that we shall use our grant-making power so to alter our life in the United States that we can be comfortably merged with the Soviet Union."

MITRE has been involved in weapons development with the DOD since inception. Its first facility outside of Massachusetts was at the Peterson Air Force Base in Colorado, home of the Air Force Space Command. MITRE also developed the unmanned planes the CIA is now using for reconnaissance (and assassination).

Most of the DOD appropriations for directed energy weapons go to the Air Force. However, the Department of Energy has played a large role in the

research and development of the weapons. At least four of the department's
10 secret laboratories are involved in the general category of "directed
energy" weapons. All ten of the labs are "GOCO's" that is government owned,
contractor operated.

For instance, DOE's Sandia lab located at Kirtland Air Force Base is
in the forefront of directed energy research and experimentation. It has a
23000 square meter building that houses the world's most powerful gamma
simulator. It is capable of generating extremely short bursts of an electron
beam of 13 trillion watts. It is used primarily for simulating the effects
of prompt radiation from a nuclear burst on electronics and complete
military systems. The contractor managing the Sandia lab is Lockheed
Martin.

The Air Force operates 14 space weapons programs in space, and at
least two ground based platforms including Sandia and the HAARP installation
in Alaska masquerading as a scientific examination into the effects of high
auroral activity on the ionosphere.

O'Keefe's second appointment over the weekend may be the most
controversial. Roger Tetrault was supposed to quell criticism that the
panel's members are too close to NASA. However, the Orlando Sentinel
disclosed the day after his appointment that Tetrault is former Chairman and
CEO of McDermott, International at the same time that O'Keefe was a director
and member of the audit committee on a subsidiary, J. Ray McDermott of which
Tetrault was also the chairman of the board.

Before becoming CEO of McDermott International, Tetrault was vice
president of a McDermott subsidiary, Babcock and Wilcox, which made parts
for the shuttles' solid rocket boosters.

Another McDermott subsidiary, BWXT is the sole supplier of nuclear
fuel for the U.S. Navy and for research and test reactor fuel for DOE's
national laboratories. It also processes enriched uranium. In partnership
with Bechtel National, Inc. it manages the DOE's Oak Ridge uranium
enrichment operation. Another joint venture of McDermott International
(DynMcDermott) with DynCorp has for the last nine years, and will for

the
next five years, manage the DOE's U.S. Strategic Petroleum Reserve.

In 1999, during O'Keefe and Tetrault's tenure at J. Ray McDermott,
former vice-president Littleton Edwards Walker pled guilty to one
felony
count of bid rigging. On May 16, 2000, the former president of the
company,
Michael Harless Lam, was indicted on one count of conspiracy in bid
rigging
and two counts of mail fraud. As far as this writer can determine, the
above
is the first mention in the media of the guilty plea and indictment in
relation to O'Keefe and Tetrault's involvement with NASA or the
Columbia
investigation. But you can bet it won't be the last.

This is called an EMP simulator. What was your point?

> My uncle works in the DC Beltway

Heh. I like that. Did you know the DC Beltway is a road? Is
your uncle on a road maintenance crew?

Perhaps you meant your uncle works "inside the beltway", as
both washingtonians and non-washingtonians like to say.
For instance, you uncle might be the station manager
at the Silver Spring metro, or an employee of the
nearby Starbucks. Perhaps he's even closer to the
center of things -- the Dupont Circle CVS drugstore?
The cafe at the Air and Space Museum? The carousel on
the Mall?

> and I know for a fact

Was this supposed to be connected to "my uncle works
on Route 495"?

> that there are
>
>>>highly trained remote viewing programs

What's a "highly trained program"? How do you train one?
In what?

>>> going on at the AIII [Assoc. of
>>>International Electrical Engineers],

You might want to do some fact checking, on whether
the initials of the "Assoc. of International Electrical
Engineers" would be AIII, on whether there is an organization
with the initials AIII, on whether the phrase "International
Electrical Engineers" makes sense.

Perhaps you meant the IEEE. Alas, they're in New Jersey.

>>> the AAME [American Association of
>>>Mechanical Engineers], the AAM, Intelsat, inside the White House, etc.
>>> The list is endless.

No, it's apparently taken in more or less alphabetical
order from a list of associations which
are based in Washington, DC. That list is pretty long,
but it's not endless. Don't forget the American Symphony
Orchestra League. And the AAA (no, not the automobile
club, the American Association of Anthropologists).
Come to think of it, don't forget the other AAA either.

Never been to an association headquarters, have you?
They don't typically have more than a handful of
employees. It doesn't take a huge staff to administer
a professional association.

>>>He has often regaled me with stories how he would think something

Certainly. We had no quarrel with the elected government of Germany,
which was bending over backwards to be friendly. Should we have attacked
them for merely taking back German-speaking territories taken from them
just a couple decades earlier? -- at least that was the logic at the
time. And the correctness of that attitude became even more apparent
when the French left the poor Brits who'd jumped in to help them holding
the bag by surrendering without much fight. In hindsight perhaps it
would have been wiser to let Hitler have France then slug it out with
Stalin while we got rich equipping both. Besides, German is easier to
learn than French ... (c:

Tony, I found this somewhere.
++++++++++++++++++
BC895XLT to PC Interface Cable Diagram
Want to make your own cable, then heres how. If you cannot find the connector ask for one when ordering RadioMax, it will be supplied at no charge. Note that there are five pins in line on the back of the radio. Only three are used; the connector may be plugged in either way round, since the two outside pins are shorted together and the two pins on either side of the middle pin are also shorted together. Here's the connections for a suitable cable[illegible].

RS-232 Signal PC Port (9 Pin) PC Port (25 Pin) BC895XLT
Transmitted Data 3 2 1 or 5 (shorted inside radio)
Received Data 2 3 2 or 4 (shorted inside radio)
Ground 5 7 3

++++++++++++++++++++
Bud

Yeah, sure... You provide lotsa good stuff - like jumping to the defense of software pirates and all but calling this guy a crook. How on EARTH did we get by so long without you? I'll never know.

I can't wait to see what you post next. I save each and every one and print them out. Someday I hope we'll meet and you'll sign my scrapbook, cuz you're my HERO powerhouse...

Yup, this is the one that the Coyote uses, to screech all over town. But I
don't know, I think the Road Runner would have a better one though.

3237. Re: LTR Trunking in NJ

Newsgroup: rec.radio.scanner
Date: 2003-02-21 22:36:45 UTC
From: KD2PM <kd2pm2@comcast.net>
Message-ID: <6kmdncs3MMNhNMujXTWcow@comcast.com>
Source record: 35920
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I noticed they placed an LTR system in there stating it was in the Newark area. In looking at the FCC database it appears to be more in Camden Co and not Essex Co. (Homan Comm). They also have an LTR in Mercer Co (closer to me) and I am currently trying to determine the groups and what LCN the frequencies are supposed to be programmed in.

If you have the Freqs for the system mentioned below, I might be able to pick them up from my location. Monmouth is the next county over from me anyway.

>Thanks.

If you're going for cheap, hand-held (for those airshows) it's tough to beat a Pro-26. Check Ebay, they've been going for under $125 at times. If you can find a Pro-43 cheap, get that. For bases, Mr. Van Allen has it covered except for the Pro-2052. Again, check Ebay and it will run around $175. Same with a BC-895XLT. Both are computer controlled, which makes life easier.

I use or have used all of these radios on MilAir, and they work well. Once you get hooked, you can spend more money and aquire more radios (as we all have).

Depending on where you live, MilAir VHF/UHF comms may not be that frequent. Make sure you do a thorough search for the latest freqs. You might want to think about a decent outdoor antenna as well for max enjoyment.

3239. Instruction Manual for SONY AIR-7

tk500 version 1.3 is now available for free download. tk500 is
an open source, multi-platform programming utility for the
Yaesu VR-500 portable receiver.

I wrote tk500 chiefly for radio hobbyists who use Linux, MacOS X,
BSD, Solaris, Unix, or other non-Windows operating system.
tk500 works on Windows-based systems (95 and later), too.

You can read about the changes in v1.3 and download it
from my web site: http://parnass.com

I don't warrant the software, but it won't cost you anything.

I like Walt's advice about the loop.
I built a couple of them, and they work great.
Why?
They reject noise and increase gain due to directionality, and because they are tuned, the bandwidth is narrowed.
This optimizes your signal to noise ratio.
Not to mention saving space.

You probably already know that you must not use
your light dimmers at that band.

Al

Hey Randy!
Did you get a good ego trip making this post?
You really blasted the guy.
I bet you feel much better now, eh?

It seems to me that it would be more in your interest to see
a professional, rather than decompress over the Internet,
and broadcast your condition to the world.

You can get away with sociopathic behavior
if you hold a government or union job and can't be fired,
but if you ever open a business, or work in the private sector,
people don't want to do business with you or hire you,
if they think you are sociopathic.

Think about it.

You know, this idea that you are going to "edit the world to conform to your views" is hardly new. It's time for you to learn to use your filters in the news reader to filter out such messages, since the character of the material on the web isn't GOING to conform to what you want, no matter how much you bitch about it...
If you are going to subject your grandson to the 'net, then sooner or later he is going to learn a few naughty words. He is also going to learn them in school from his friends. I'll tell you a little secret about children. The more you try to hide ANYTHING from them, the harder they will try to dig it out. It's called "rebellion" in your circles... Get ready for a moderate to heavy dose of it , depnding on just how much you (and his dime-holding stuffed shirt parents) have supressed things. The severity of the rebellion is directy proportional to how many lies you have told , and how much hypocrisy you have exhibited, when he reaches the age where he can recognize it. He may view you as a totally unreliable source of information on any subject at this point, since you have failed to tell anything "like it is", and he will refuse to listen to just about anything you have to say from then on.... Think about it.... Micromanagement of his reality is not the answer here, my friend. You only destroy your own credibility in the end, get a kid that wont talk to you when the chips are really down, because he really never knew you as yourself, but as some kind of Mother Theresa idiot.

Yes. There is a reason for this. The CIA and Army have already admitted to using soldiers for guiniea pigs in Desert Storm, to test biological and chemical agents. This time,there wont be any slip-ups with some home town doctor finding the toxins or bacteria they were using on the troops in his body when he does an autopsy. (not that they would leave any organs in the body to get tissue samples from anyway).
What will we have in Iraq, but a gigantic testing lab, what with all the furor over how many chemical and biological weapons Saddam is supposed to have ? It's too easy , you see. There is no reason to have 350,000 of our troops on the ground over there, since ground war is a thing of the past, with the technology being what it is. There is a reason for them being there, though, as lab rats for the Department of Defense and CIA boys to experiment on... Welcome to the real world and the REAL government....

Better to be a sociopath than a one-trick pony, Tom. That's what you
are, right? A quick appearance with a *really* lame flame and then off
you go. Do you spend your days flitting from ng to ng looking for people
to harass?

> Think about it.

You think about this: What Paul said? Do it twice.

Thank you.

3262. Re: computer cable for bc895xlt

Source record: 35945

"Anthony Bonacarti" <anthony@mostlyrockets.com> wrote:
> anyone have schematic for the cable needed for the bc9895xlt?

The interface is a 5-pin PCB header (.025" square pins on 0.1" centers).
The mating socket is standard (RadioShack.com's Cat# 910-1471 was 25 cents,
plus 24 cents for 3 contacts), but a segment cut out of a DIP socket will
work just as well. The pinout is symmetric, with pins 1&5 (the outer ones)
carrying data in (to the radio), 2&4 are data out (from the radio), and
pin 3 is ground.

The cable connections are:

BC895 DB9 DB25
1 <= to radio 3 2
2 from radio => 2 3
3 <= ground => 5 7
(TR-CD-DSR) 4-1-6 20-8-6 *
(RTS-CTS) 7-8 4-5 *

* If you will be using a standard communication program, add the two sets
of jumpers in the RS-232 connector to simulate the normal control signals.

The comm protcol is half-duplex, 9600 baud, 8/N/1. Commands to the radio
should be terminated with a C/R only.

Actually, Andy, there is still some analog activity in your area (I live fairly close to you), although it is far less than even a couple of years ago. It is--and always has been--pretty boring stuff.

The thing most often said on cell phones is: "Where you at?" It seems like an awful waste of resources to provide a system that does little more than let people track each other's location while walking around the mall. And it's even more of a waste of time to listen to it!

I really never understood the antenna.
30 foot is simple but I thought 80 meter was metric so what does this part
mean.

Vic, it would appear you know nothing about electronics or A.F. amplified speakers. The MOTOROLA speaker you are referring to is an AF amplified speaker with an audio boost 20dB. If one boosts ANY signal containing noise, one also boosts the noise level in a linear fashion. These particular speakers are designed for FM use in public service vehicles. The amplification of which is designed to amplify the audio deviation (which does absolutely NOTHING on SSB except boost the volume).

I would suggest you read the spec's of your speaker on the Motorola's website.

He was referring to the 80 meter band, using a 30 foot vertical and
also a 80 meter dipole which is about 133 feet long. Still confused?
Read up on antenna theory, antenna length vs meter bands, etc.
Low frequency verticals are much shorter than their dipole counter-
parts.

The 80 meters he is referring to is the Amateur Band (3.5 - 4 MHz) The CW portion is refereed to as 80 meters and the phone portion as 75 meters.

It is derived by dividing the speed of light in meters by the frequency.

You may infer that the 30 foot antenna has a loading coil as part of it's makeup, or an external means, to change its electrical length.

That's beautiful and true at that. I'm not changing for anyone, especially for some dumb ass I don't even know. I'm set in my ways and there's nothing short of death that can change it. Not to mention I'm an American and as long as I stay within the laws of this great land, I'll be just fine. Having the word "fuck" or any other word someone conciders offensive in my messages does not constitute anything illegal in this country or in it's laws. Well perhaps for television and radio, but the FCC don't have any control over me, I'm not a broadcaster.

In closing I'd just like to say the best thing for people to do is use the filters every newsreader has to get rid of anything they don't want to see. It's a lot better than making yourself look like a moron by posting abuse reports you send to my ISP that don't even get a second look by them.

For more info on people that like to report people or make threats of lawsuits like Never Anonymous Bud, check the following link.

FS: Pro-2052, 1000 channel trunk-tracker. Also covers Mil-Air band.
It is in near-mint condition. I rarely use the term "mint" but this one is
as
close to unused as you can get, it was used for a few hours via computer
as a control radio for 'Trunker' program.

I can't find the box but I have the manual and wall wart power supply.
$175 + shipping & insurance. Money order or PayPal. (PayPal ok but
please add $5) Send me your zip and I'll calculate shipping method of
your preference. I always double box and wrap in many layers of bubble
wrap. It will be more than adequately packed. I don't trust package
handlers!

The reason I'm selling is because I replaced it with a new BC785D.

Digital photos on request.

Thanks,
Jon

Excuse moi. I made a few acronym mistakes, so i called my Uncle and stand corrected.

The offices do not train the personnel in the various DC and Beltway small agencies -- they merely EMPLOY the trained remote veiwers to work in their small organizations. Training locale is tip top secret and off site.

Intelsat [satellite consortium] does not start with an "A"; so your theory that i went through the phonebook is fallacious; you can add Medtap out in Bethesda, Maryland, to the list also.
http://www.medtap.com/

My uncle wants to know how the old retired Admiral is doing at ASME K Street office, if he still has the photograph of the emerging submarine on his wall, and did he ever fully mentally recover from the comet that smashed into Greenland just a few years back, i.e., the airborne operations surrounding that clean up mission?

Source record: 35880

I have a MVT 9000 and it came with a plug for the car but not for the house. The manual only says 12v and Radio Shack has them but at different rating such as 700mv or 1200mv. Which is best for this scanner so I don't end up with a $500.00 paper weight.

Thanks,

Scott..

Same with FM. Audio is audio. If this has a frequency cutoff range, it would
work on SSB or FM. Audio is adio. The speaker is not going to know what kind
of device produced it.

Please check to make sure that the aluminum foil in your hat is
properly attached. It seems that the rays are getting through again.
If you are not sure of how to properly construct a Aluminum Foil
Deflector Beanie, please go to this website.
http://zapatopi.net/afdb.html You will get all of the information that
you need. Please be careful cutting out the hat. Not only will it not
work if it's not properly constructed, but you might get an owie from
the scissors.

Sorry CW, wrong answer. This is Audio Basics 101.

Most FM communications speakers (like this Motorola) have internal logic designed to increase and amplify the audio's DEVIATION without the use of bandpass filtering thus allowing for a wider frequency range. Wider frequency range = More potential bandwidth to amplify noise. Wider bandwidth means a louder Frequency Modulated audio.

Conversely, an SSB communications speaker (ala Clear Speech, Midland, SGC, Timewave, Harris, etc.) are designed to do just the opposite by narrowing the audio within a specified range of bandwidth (using bandpass filtration to notch out the noise) and then amplifying the remaining audio, which is exactly opposite of the FM speaker.

A communications speaker designed for FM use is the last thing in the world you want for SSB. Go check out the spec's. The 12VDC power input on these speakers are used solely for the deviation amplification section of the speakers circuitry. My former company installed hundreds of these in Police and Fire vehicles and believe me these are nothing special.....

With all due respect, once a signal has been recovered by a discriminator or demodulator, the speaker knows not from whence it came.

Deviation is only a concern of the detector. The derived audio is inherently cleaner from an FM signal as electrical interference normally varies in amplitude rather than frequency.

You are correct that the speaker will amplify the noise as well as the signal. Normally sideband communications requires bandpass filters in either the radio or the speakers to reduce noise. Many of the newer rigs have built in Digital Signal Processors that would produce audio that could be used to advantage by the Motorola speaker.

On the other hand, I would consider it a travesty to put a crappy old Motorola speaker on my TS-870. I might consider one in my truck for the ICOM 706.

What are you? Some 10 year old kid?

Depleted uranium rounds do not create "a radio active no mans land". Get your nose out of the comic books and back to reality. Check the table of elements in that science book that you have never looked at, peruse it and come back and tell us what might be the reason for using depleted uranium in shells.

Hate to tell you this, but those rounds are fired daily here in the US. Many of them three miles as the crow flies from my house. The Marines over at Paris Island enjoy making noises with their big guns.

Oh my God! your right, my dog just came in and he is glowing...

What province are you in? In BC they run 138 to 140 MHz in the interior, the Lower Main Land they are all 800 MHz encrypted, trucked digital and on the island they run 140 MHz. In Alberta they are in around 155 MHz but yes they are all going encrypted digital so if that is all you want to listen to don't waste your money. Even the new digital scanners won't pick them up. I just spent $1600 on a radio with the hopes that I could still pick up the highway patrol from Hope BC to West Vancouver but no they have just disappeared in the last month or so. Also all of the BC Ambulance's are gone and many of the larger fire departments are moving. So like I said earlier don't waste your money.

> With all due respect, once a signal has been recovered by a discriminator
or
> demodulator, the speaker knows not from whence it came.

OK, let me put this in terms that are very understandable. The audio signal produced by a receiver has a specific bandwidth, yes? FM Communications Speakers are designed to amplify any incoming electrical signal from 200-13,000 Hz. This particular MOTOROLA speaker was designed, manufactured, and sold with the express intent to be used with FM public service tranceivers (this is the reason you've never seen Motorola attempting to market these SSB filtration). If one were to actually connect this speaker to an SSB transceiver (assuming the SSB signal was free of QRM) one would find that the tone of the audio will suddenly become richer (bassier). This is because this particular speaker is BOOSTING (20dB) the lower frequencies which is exactly the opposite of what one wants to achieve on SSB in a high QRM environment.

The circuitry in an SSB communications speaker does just the opposite. The goal in this case is to set a frequency floor and a ceiling (cut-offs) the result of which is THEN amplified. There is a vast difference between the two. Using this MOTOROLA speaker does absolutely nothing onn SSB except provide a 20dB boost of EVERYTHING contained in the audio.

A modern day IF DSP does exactly the same thing prior to the signal being processed and amplified within the radio.

> On the other hand, I would consider it a travesty to put a crappy old
> Motorola speaker on my TS-870. I might consider one in my truck for the
ICOM
> 706.

The best speaker Ive ever owned was a crappy Midland communications speaker ($12.95) that did a wonderful job down on Kilowatt Alley.

Depleted Uranium FAQ
Robin Rowland, CBC News Online

1. What is depleted uranium?

Depleted uranium is still uranium. There are three types of uranium, U238, U234 and U235. Uranium 234 and 235 are fissionable material, the kind used in bombs. Depleted uranium is what is left over when the U234 and U235 are removed. The remaining U238 is still radioactive.

2.Why is it used in weapons?

A DU round is made from the leftover U238. The killing punch comes from the solid depleted uranium metal rod in the shell. A 120-mm tank round contains about 4,000 grams or 10 pounds of solid DU. A DU rod is very dense - about 1.7 times as dense as lead.

3. Has DU been used in combat?

In the Gulf War, the U.S. fired as many as a million DU rounds, leaving a battlefield littered with 1,400 wrecked radioactive Iraqi tanks.

During the 78-day Kosovo War in 1999, the U.S. fired 31,000 rounds of DU at Yugoslav armoured vehicles and tanks. There are reports that the U.S. fired 10,800 DU rounds during combat in Bosnia during the air campaign in 1994 and 1995.

Depleted uranium shell
Depleted uranium shell
4. What happens when a shell explodes?

At high speed, DU slices through tank armour like a hot knife through butter, triggering the explosive content and creating a fire hot enough to melt aluminum. The depleted uranium also burns on impact, creating flying bits and dust that are toxic and radioactive with a half-life of 4.2 billion years.

5. How dangerous is depleted uranium?

Most scientists say the level of radioactivity in depleted uranium is low, lower than naturally occurring uranium in the environment.

However, DU can be dangerous once it has been used on a battlefield. Then DU can be considered both a chemical and toxic waste hazard, and a radiation hazard.

If a chemical form of DU that is soluble in water is present, then the DU can be either absorbed by breathing or by ingestion. That could cause

heavy metal chemical toxic effects in the kidneys.

If the areas are contaminated by uranium oxide, then the hazard comes from inhaling the dust. The dust could be deposited in the lungs and could, over a long period, be a cause of lung cancer.

Most scientists say that large exposures would be needed to cause a significant increase in the risk.

Military authorities at the Pentagon and the British Ministry of Defence say depleted uranium does not pose a significant danger.

As for Canada, Brig.-Gen. David Jerkowski told CBC News in 1999 that, "Our soldiers are not at risk. There are other risks that are much greater than depleted uranium: there are many, many more threats out there: landmines, diseases, reptiles. It depends on where we work in the world, and there are many greater risks than that."

In Canada, Britain and the United States, veterans' groups have disagreed, saying that what was called Gulf War Syndrome and the recent appearance of what is being called Balkan Syndrome could be the result of exposure to depleted uranium.

6. Are governments reluctant to investigate the problem?

Military planners originally said that because the risk was so low, investigating depleted uranium was not worth the cost. A full scientific study would require screening all soldiers who had served in a combat zone where DU was used over a long period of time. To be scientifically valid the study would also have to track an equally large group that had not been exposed

Now as more veterans groups put pressure on governments, investigations are beginning.

7. What is happening now?

There has been controversy over the use of depleted uranium since the Gulf War. Recent reports of deaths and illness among NATO troops who served in Kosovo as peacekeepers have heightened the dispute over the effects of depleted uranium.

* Italy began pressing NATO for an investigation of depleted uranium and for a moratorium on the use of DU weapons after at least six Italian soldiers who had served in the Balkans died of leukemia.

* The Belgian Defence ministry says 1,600 soldiers have complained about headaches, trouble sleeping and problems concentrating. Nine soldiers have been diagnosed with lung, skin and blood or brain cancer. Five have died.

* The French National Assembly has started a parliamentary investigation into Gulf War and Balkan Syndrome. There are reports that five French soldiers who served in the Balkans now have leukemia.

* The Netherlands has reported several cases of leukemia among its
troops.

* Spain has reported eight cases of cancer.

* Portugal has reported one death.

* Portugal, Norway and Greece have begun a mass screening of
soldiers who served in the Balkans.

* Germany, Italy, Belgium and Portugal are demanding that NATO
begin a full investigation of Balkan Syndrome and possible connections
to depleted uranium.

* The United States has warned against what it calls "hysteria."
"As far as I have been told there is no scientific evidence that would
link to a health hazard," Secretary of State Madeleine Albright told
reporters.
Defense Secretary William Cohen said: "We have found no
scientific link between depleted uranium and leukemia as some have
alleged." At a Pentagon briefing, Cohen said, "I suppose if there were
any deficiency to be found it would be in [the] failure to pick up
fragments of destroyed vehicles or tanks in which the depleted uranium
projectiles were used." "But beyond that I think adequate warnings were
given and there is a very low risk of coming into contact with this
provided there is sufficient protection taken."

* The World Health Organization says studies in Kosovo show no rise
in the rates of leukemia among the Albanian population in the province.

* Russia has reported no evidence of leukemia among its troops that have
served in Kosovo.

Is this scanner any good? I am only new to this type of hardware and I don't know what to buy.
I am living in Newfoundland and I am interested in the weather,police and Emergency vehicles radio transmissions.
Could someone with knowledge about this help me out. I would appreciate it.

Thanks

Darryl

paragraph 5 is the only operative one. The rest such as the half life in billions of years is technically correct, but! if you start out with less than natural background...

Are the tanks radioactive? Hell yes they are! They are almost as radio active as you are from the consumption of food.

Chicken Little would have been proud of the exaggeration of the dangers...

Now for your entertainment, Let's do a google search on Robin Rowland and determine if their might be a slant to the writing.

I buy you books, I send you to school, then you eat the teacher and flunk lunch.

Paul, you apparently did not read my entire message. You fixated on the first paragraph or you would see that I agreed with you on the noise.

Point of history: Hitler was NOT elected by a "majority of Germans." In the July 1932 election he got 37.3%. Hitler became chancellor of Germany in January of 1933 after some backroom deals. After the Reichstag was burned down Hitler took dictatorial powers, closed down many newspapers that supported opposition candidated and had some candidates murdered. Certain opposition parties such as the German Communist Party were outlawed and their members put into concentration camps.

Large corporations were "shaken down" for contributions to the NAZI party's campaign war-chest.

Even with these measures to skew the election process Hitler still got only 43.9% of the vote in the general election of 1933.

hi,

i am thinking of getting a scanner for listening to cellular phones in uk.

i understand you need to connect them to your pc and use some decoding
software?

can anyone recommend a scanner and or links to some info on the net..
thanks,

bone

Hello!

I have the Icom r2, r3 and r10.

If you dont listen much to short-wave i should choose the icom-r3 instead.
The R10 is quite a old style scanner and its slow . Sure it has all the
things a scanner needs but in my opinion its old.

(the best of the 3 you looked at is probably the AOR but even that one looks
old made 1998? i think)

Just take a look at the r3 in the store. Its a fast scanner with great width
0.5-2450mhz.
Since i bought the r3 i put all the other scanners i had on the shelf. This
one does all for you.
Even though i do as Rich W and take all scanners with me on trips i allways
end up using the r3.

You said you wanted to listen to tv, with this scanner you can WATCH tv.
review for the R3:
http://www.strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=r
ev&class=recv&num=037

One thing... if you buy the r3 buy an extra rubber antenna to use on the
field., the tv antenna that comes with the scanners holds for a week.

And here are some reviews of the scanners you mentioned:
http://www.strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=f
i&class=recv&num=020
http://www.strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=r
ev&class=recv&num=002
http://www.strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=r

CW, pursuant to your postings the two things I find quite ironic while simultaneously pathetic is that your screen name obviously denotes a mode that you apparently cant grasp due to either lack of intelligence or committed fervor.

By your demeanor I should have known why you know absolutely nothing about SSB equipment because it appears the only SSB QSO's you've had were on the lower side of Channel 38.................Keep on Truck'in Bandit and Watch out for those Smokies.

Open the back of your scanner and between R3 and R4 you will find the unit of depleted uranium. That must be it, or they wouldn't be talking about it on a scanner page.

Comparing scanner specs is sometimes difficult as the specs are stated in different conditions or units.

If one has the ability and time to convert all units to a common base the comparison can be made, that is, if one believes the sometimes inflated specs.

Not being one to enjoy converting meters per millenium to furlongs per fortnight...

I normally go to Strong Signals.com for their reviews, then further analyze the one or two that meets my particular needs.

His middle initial is W, therefore the CW. He does have a Technician class
license. That's almost like being a CBer. :-)

Rumor has it that all of the above mentioned miscreants followed Drew Durigan's lead by finally getting a life and are now selling radio equipment and rock & roll memorabilia on eBay. Too bad Lloyd Davies didn't follow suit also.

A 700mA supply will be fine but a 300mA such as 273-1662 will also be
OK.

Another alternative would be one from Mouser Electronics
(http://www.mouser.com), their product 412-112055 is a 12v DC, 500mA
rated power supply.

and I know for a fact that there are highly trained remote viewing
programs going on at the IEEE [Institute of Electrical and Electronics
Engineers, Inc], the ASME [American Society of Mechanical Engineers],
the AAM, Intelsat, inside the White House, etc.

The list is endless.

He has often regaled me with stories how he would think something
insulting about the person covertly remote viewing his thoughts --
using the top secret microwave technology [no devices can be seen]
-- at his office job, until the person within his visual range who
is reading his thoughts and voyeuristically feeling his bodily
functions and viewing his subconscious and conscious imagery --
the remote viewer will have a breakdown and goes into aggressive fits
because he/she can't help restrain their anger any longer over hearing
in somebody's
mind, "... i wonder why this person is so dissatisfied sexually, too
shriveled up and dessicated and used out genitilia??, or, ... just so
near absolute kelvin zero low an IQ that only the remote viewing
program of the NSA would accept the little loser for employment".

If you suspect that you are being remotely viewed, and somebody is
reading your thoughts, think to yourself the most humiliating things
about the person you suspect, over and over. If they are innocent,
they won't have a clue what you are up to. If you are correct, watch
the fireworks, it is LOTS OF FUN !!!

Remember ... if you think in a language they do not understand, you
can smoke screen your thoughts. But if you think in images, any fool
from any country can read you.

Stand or sit VERY NEAR the person you suspect of being a graduate of the NSA remote viewing program, and make a mental picture of them on their knees and fellating a poodle with mouth wide open, or something equally disgusting, make sure you form a clear picture of the remote viewers face in your imagery, and this will set them off like a Patriot missle too!

Suspects: HAARP officials; NASA upper officials; many federal agencies in the DC Loop; many New York City high paid attorneys, especially at 666 5th Avenue; Skull & Bones members; Air Force MK Ultra personnel; West Point grads who go on into research acadamies as professors; -- it could be just about
anyone, so please use this test if something one day strikes you as strange and you ask yourself "did that person read my mind? ... it is the only way they could have known?!"

REMOTE VIEWING:

Is this testing occurring in other countries?

I've been getting emails from people claiming to be victims from Asian and European Countries. Answer: Yes, because they wanted to test the effects on people with slightly different genetic makeups and/or body chemistry (different cultures eat differently, for example, so they have different chemicals in their bodies).

Interestingly, the most resistent to the effects (I participated in this particular study) have been the Ainu from Japan. Nobody knows why, yet.

MICROWAVE BRAIN CONTROL & COCHLEAR IMPLANTS, U.S. Black Ops:
http://www.angelfire.com/or/mctrl/microwave.html

The sensors-transmitter, which is EEG micro technology, read the brain
waves and transmit a digital signal. The signal is extraordinarily strong for such a small device.

The signal can travel several miles.

It is picked up by a relay receiver and transmitted to a computer, where instantaneously the software reads the digits and converts them
into language. This is all done at radio wave speed, or the speed of
light.

Effectively, A PERSON WITH THE INVOLUNTARY IMPLANT HAS EVERY THOUGHT READ WITHOUT KNOWING IT.

It sounds like science fiction or paranoia doesn't it? It is not fiction and it is not the product of a psychosis. It is absolutely true. The technology is this advanced, and the criminal organization is this psychopathic.

The Organization relies on it sounding so bizarre and heinous that no one would believe it. It is extremely cruel high technology reality.

ANY ONE WHO DISCLOSES THEIR DIABOLICAL METHODS IS EASILY DISCREDITED, TERRORIZED, MIND CONTROLLED, OR EVEN MURDERED by The Organization.

Accompanying the above "thought reading" technique are the "thought inserting" techniques. Very low frequency subliminal sound has been used for years for "inserting" ideas into one's mind.

Basically, very low frequency subliminal sound is perceived by the victim as one's own thinking. It bypasses the normal auditory system, but the content of the words is perceived. Because it is so subtle, if a broadcast is in first person language, an unaware person finds it impossible to discriminate the subliminal broadcast from one's own thoughts.

Microwaves are those commonly used in radar sets and microwave ovens, for example.

The principal advantage of EHF over E(L)F lies in the fact that its transmissions are "straight line" and can thus be beamed with ease into small or tiny areas. E(L)F, by comparison, tends to scatter widely.

Microwaves are generated by a device known as a "Magnetron" in which electrons, generated by a heated cathode, are moved by the combined force of a magnetic and electrical field.

The complete assembly is sealed inside a vacuum enclosure. The maximum power output is naturally limited by the size of the individual Magnetron but research indicates the largest can generate a stream of microwave "pulses" at up to ten million watts per pulse. The resulting microwave pulsed beam can be focused in much the same way as a camera lens - from ultra wide angle to telephoto - creating area or pinpoint capability.

Fortunately the Magnetron is not a small device. Informed sources indicate a portable Magnetron powerful enough to harm a large group of demonstrators, for example, would require space equal to a small truck.

I have one and it is an excellent scanner IMO. The only draw backs are
if you have a lot of frequencies in your area (it only has 30 channels)
and if you have trunking in your area (it's not a trunk tracker).

I live in a rural area and it suits my needs perfectly. Do you have a
radio store in your area? They would be able to tell you what you'll
need for your locale. HTH.

That's what I figured. The guys that usually spout pompous recommendations along vulgar retorts are usually the ones who have a minimum low level ticket.

Although I must say, the majority of them are extremely proud of themselves to the point where they believe that they've actually accomplished *something*.

3354. Building a broadband scanner preamp with filters (also a good excuse to solder)

Newsgroup: rec.radio.scanner
Date: 2003-02-24 04:53:42 UTC
From: qutec@excite.com
Message-ID: <d2e33a2f.0302232053.3c5959aa@posting.google.com>

Cross-posted to:
rec.radio.scanner,rec.radio.shortwave,rec.radio.amateur.homebrew,rec.radio.amateur.dx,rec.radio.amateur.antenna

Hello all,
I just picked up a Icom IC-R2 handheld scanner, 25-1300Mhz discone
(http://users.cis.net/kingpop/Superdiscone.htm), 40 feet of Belden
9913 cable and 30 feet of mast(radioshack)to start listening to the
world.

I would like to build my own preamp with several sets of filters
(10-20)to knock out the high power RF (radio,pagers, ect.) I am
thinking of using a minicircuits ERA-3 monolithic amplifier
(http://www.minicircuits.com/dg03-168.pdf) but if someone knows of a
better amp, I'll use it.

My main questions are this:

What frequency bands should I target with the filter sets?
The FCC alocation chart I have shows what is licensed to each band,
but does not mention alotted power.

What software would help me quickly find the component values for the
filters?
The simpler the better!

Would I gain anything from cascading ERA-3s? Could I set them up for
variable gain? or would I have to switch in attenuators to prevent
front end overload?

What type of remote filter switching scheme should I use? I want to be
able to control the preamp from inside the house. I know that relays
tend to be noisy, so those are out. Transitters?

Im sure an RF guru could help me out here.

Thanks for reading,

Jason

Canadians are doing this for homeland security and the US is moving that way so what would be the point of moving to the US, taking a cut in pay and paying twice as much for everything? I would rather live up here and make $23.00 per hr then move down and make $5.00 doing the same work. Also up here I can legally listen to anything I want on my scanner including cell-phones.

> mean.
>
> Chris
>

The antenna is 30 ft. tall but built for the 80 meter band. It is 1/4 wave
on 80 meters. Ordinarily 1/4 wave of 80 meters is 133 feet but it's a trap
vertical and the coils in the traps act as loading coils, so the antenna's
electrical length is 1/4 wave for 80 meters.

Unless the discone is friggin' huge, it won't work worth a flip for 518 kHz.
You need a nice, long wire antenna such as a random wire or dipole. Most
discones are built for VHF and UHF, 518 kHz is MF.

>world.

That is a huge frequency range and no antenna is going to work well on that entire frequency range. It might be a good idea to split the frequency range into at least two bands, say 25-250 and 130-1300 MHz and use two separate antennas designed for those ranges.

> I would like to build my own preamp with several sets of filters

>better amp, I'll use it.

Those MMICs are cheap, why don't you build a complete preamplifier for each band. Filter switching is nasty at higher frequencies, especially when it must be remotely controlled. You could feed the outputs from the various preamplifiers through some combining filters to a single feed line and only switch the DC supply to the various preamplifiers.

When using multiple amplifiers is the tower, there is not much to gain from a single ultra-wide band antenna. Use multiple antennas designed for each frequency range of interest. Usually there is not much point of using preamplifiers below about 200 MHz, since the band noise is quite high and the cable losses are low.

Stripline filters are nice for the upper UHF frequencies, while at VHF, ordinary coils and capacitors or helical filters (e.g. Toko) are nice.

Those MMICs can be easily overloaded, so make sure that the strong signals from nearby FM or TV transmitters are filtered out prior to running the signal through the ERA amplifier.

>Would I gain anything from cascading ERA-3s? Could I set them up for
>variable gain? or would I have to switch in attenuators to prevent
>front end overload?

The antenna amplifier should only compensate for the feed line loss and mask the receiver noise, so a good rule of thumb is that 10 dB should be added to the cable loss to get the required preamplifier gain. Handheld scanners are very easily overloaded, so there is not much point of using too much gain, even if the input is filtered.

==========
The question is : Do you really need a pre-amplifier ?
Not knowing the frequencies of the high power interfering radio sigs and
whether there are other nearby frequencies you would like to monitor , I
would suggest to initially consider a simple (multiple) quarter wave stub
arrangement , to suppress the most troublesome RF sources.....and
take it from there.

I can tell you from personal experience (we make thoudsands of them) that targeting, say, the 152-153 pagers and not also eliminating or radically reducing signals within many MHZ either side is far from a trivial problem.
The IP3 levels of the MAR and ERA devices make them unsuitable (IMHO) for preamp use.
In almost every case, wideband preamps create problems far worse than they solve. Put a good quality feedline on your antenna and forget the preamps.

Yes, RecAll PRO. You can record in stereo (two channels) and
save your files in .MP3 or .WAV format with a time-stamp.
(And probably in Ogg Vorbis format at the next release).

It also has a VOX (squelch) control.

>
> What frequency bands should I target with the filter sets?

You would probably want to block everything below 25 MHz
(scanner is not real HF radio and overloads easily), 87-108 MHz
(FM is very strong and not interesting), 152-153 MHz (unless
you want to decode pagers), 108-116 MHz (AIR beacons)
and maybe 116-136 (unless you want to listen to airplanes).

Start with high-pass 25 MHz filter and FM 87-108 MHz notch.

>
> Would I gain anything from cascading ERA-3s? Could I set them up for
> variable gain? or would I have to switch in attenuators to prevent
> front end overload?

R2 is extremely sensitive. Amplifier will make things much worse
- especially with additional outdoor antenna. Forget the amp and
prepare few attenuators: 6/12/18 dB. You will probably find them
much more usefull.

Good luck!
Piotr

3373. Trunking scanners in the UK

> world.

I hate to say this, but hooking a handheld scanner to an outdoor antenna
and then addind a preamp is a BAD idea.

Handheld scanners have poor intermod immunity for several reasons. They
are designed to minimize current draw (which drains the battery). That
precludes the use of high IP3 mixers. They usually do not provide
pre-selector filters either due to space constraints. Basically, they are
meant to be used as handheld radios with a small rubber duck antenna.

A good desktop scanner like the Radio Shack PRO-2004 series incorporates a
series of bandpass filters (about 10 as I recall) in the front end to
reject unwanted frequencies. The appropriate filter is selected as the
radio scans through each programmed frequency.

>What is actually up for grabs in the airwaves in the truncing spectrums.
>Am I limited to the bearcat/radioshack scanners and scanners with band-
>gaps?

The only Trunking capable unit available in the UK is the UBC-780XLT.

>Just trying to see if it's worth buying something like UBC-3000XLT instead
>of something like a yupi 9000mk2.

The '3000XLT is a good model but it isn't really comparable to a MVT-
900Mk2 and doesn't offer trunking.

Sounds like you're trying to run when you haven't yet learned to crawl. I can tell you from personal experience: If you attempt to build your own wireless lan card or other FM receiver/transciever from scratch with nothing more than a high school textbook electronics education and 10 bucks worth of parts you're doomed to miserable failure.

May I suggest something a little more in line with your developing skills? Now if your serious, this is a project that will really wow your teacher and score you an A+:

I take it that you have a scanner? Hopefully you have two - one of which being computer controllable. If so, I want you to check out www.trunkedradio.net and look in the Trunker sections. Follow the links there and also do a google search on "How to Build a Data Slicer". There's schematics and links on the net that will guide you thru it step by step. The only prerequisites you need are the ability to read and the ability to solder wires and components to an experimenters board. The parts you need will cost you less than $10 at Radio Shack.

I think a great project for your electronics class would be to put a discriminator tap in your scanner and hook it up to a data slicer that you made, connect it all up to your PC, and show your whole class how a public safety trunked system works. Your teacher will be really impressed, and you'll learn something really cool in the process. No joke.

Good luck, let us know how it went if you try it!

Um, well I can't really help you with the chip question but I'll take a shot at this.

MHZ = Megahertz, or 1 million Hertz, or cycles per second. 1 GHZ, or gigahertz, is 1000 Megahertz.

The lower frequencies, from DC to about 3 MHZ, propagate mostly by groundwave. The radio wave follows the surface of the earth. From around 3 to 30 MHZ, the HF spectrum, radio waves propagate mainly via skywave propagation. This is the shortwave spectrum and signals are able to be heard worldwide. Above 30 MHZ, signals generally propagate by line-of-sight, which means the receiving antenna must be within range of the transmitting antenna. These are, of course, very broad generalizations and there are other propagation modes such as sporadic E and meteor scatter that I won't go into. Up in the microwave spectrum (GHZ range), line-of-sight becomes critical and the antennas must literally be within sight of each other. This is why you see antennas up on the top of tall towers.

Bandwidth refers to the width of the signal itself and is independent of frequency, but convention is that lower frequency signals use narrower bandwidths, such as a 3 kHz wide SSB signal, while up in the microwave range signals can be several MHZ wide.

I am researching the purchase of a handheld scanner that will receive hopefully ham radio, short-wave and local emergency bands. I am located in a low lying river valley in rural Nebraska. Can I expect to get any reception at all with the antennas provided with a scanner or is it more likely I would need some sort of antenna located on the roof of my house? Does a more expensive handheld scanner usually equate to better reception in this case? Any help would be appreciated.

Rich

Well you gotta realize that $23 Canadian dollars is about $14 US dollars.

My guess: he has an existing cigarette lighter adapter plug that is
already riveted together with a strain relief for the cable. In that
case, I'd open up the PRO-2026 and solder the connection inside as
well. It would make for a more elegant installation.

> I would like to build my own preamp with several sets of filters

Jason,
I have two radio shack scanners, an RS-2045 (a base) and RS-64 (a handheld).
The 2045 gets a lot more use at home because it allows attenuation to be individually selected for each channel. Adding a preamp will probably just overload your scanner, especially if you live anywhere but out in the country.
But a cheap test might be to put a TV preamp inline with your discone. The discone doesn't have gain to speak of, and you will lose a little of what you receive on your coax, so something like 10 db of gain might not bother you. You will probably want to switch in the FM filter if it has one. Of course using this set up you won't be able to scan all bands, but it will give you a feeling for how much help a preamp can be in your situation.
If you locate something distant you really want to hear, you might investigate a second antenna such as a log periodic, it has gain, bandwidth and is directional.

Good luck, Jim

3397. Trade: PRO-43 for PRO-2005

Excellent condition PRO-43 with cell modification. Super clean. Comes with original manual and original AC adapter/charger. Looking for good condition PRO-2005.

Frank

REMOTE VIEWING

I too am receiving many emails from my "flock," and here are more places to add to the growing list from people with first hand experience of agencies or institutions that exploit-employ the trained Remote Viewers who come out of the NSA or Special Ops training facilities:

Conde Nast -- the highest levels of their publishing management

Vanderbilt School of Medicine, Tennessee

Emory University, Atlanta

Australian Embassy, Wash DC

U.S. Commerce Dept., Wash DC, Space Satellite division

USDA, Wash DC -- adult extended education department, satellite sciences courses

The USO concert band booking department, Wash DC

Clyde-Woodward Engineering, Oakland, CA

PG&E, Market St., San Francisco

Please add these to the others, i.e., ASME, IEEE, Intelsat, Medtap, et al.

Anyone further interested might look into the MOHOROVICIC DISCONTINUITY, ... 22 miles beneath the surface of the earth, and 6 miles beneath the ocean floors, there is an incredible anomaly, or DISCONTINUITY.

I am tracking the two comets you commented upon that are at this very time very near the sun. Thank you.

Why should you be cursed? Radio Shack has GRE and Uniden rebadged equipment. The PRO-95 for example is a really great scanner, as is the 2032 and many of the older ones as well.

Once you get past the sales pitch for cell phones and satellite TV pitches, they have some really good scanners.

Thanks for your vote. You my friend have made it to the moron list hall of
fame. May I also note that your news reader has a message filter. Please put
it to use.
--
(Re-worded for morons like banjocat)
The following is a list of morons that
have a serious problem with the First
Amendment and insist upon either whining
to me personally either through unwanted
emails, in replies on Usenet or making attempts
to silence me by sending complaints to my
ISP. To avoid being on this list, please
do the following. If something I post
disturbs you so badly, put me in your
message filter. This will prevent you both
from seeing my posts and getting laughed
at by myself and my ISP.

The idiot list: (Now in order of highest to lowest stupidity)
The top moron in any group on Usenet is Gary Roselles of Rapid City, SD -

3405. Mil-Air : A few Comments and Questions for All

Newsgroup: rec.radio.scanner
Date: 2003-02-25 05:12:23 UTC
From: cathexis@yourhaterols.com
Message-ID: <3e5aef07.267015998@news.starpower.net>
Source record: 35788

Greetings All,

Although already a Ham, I had a lot of fun when I got my AOR 8200 MKII in Aug., '01. Mil-Air was the primary planned usage from the start, though it's broad coverage and other features made it very valuable to me then and now. It saw its best usage when, living in northern VA., I spent the warm night of Sept.11/12 outdoors monitoring as DC ANG flew CAP over DC, called for refuel, etc. The next few days Mil-Air was basically almost anything you heard as most other flights where grounded. I sat out that nite until 0430 and could see the F-16s flying over all nite, hear them, and wait for their return. A great and patriotic experience for me.

But time marches on, people get busy, families must pack up and move, and well,....shit happens. Now, with the (hopefully) warmer weather soon to return to DC area I'd like to break out the 8200 and see what's out there. Though my life was torn up last year by a family move and illness and debt, I'm still in the DC area. So I thought I'd post this to see what scuttlebutt there is on the current state of Mil-Air. Ask a few questions too.

Mostly, have things changed in Mil-Air monitoring over the last year ?

Not so much the freqs perhaps, but is the traffic still out there and audible ?

Has there been a drop in scannable chatter due to tech such as switching to digital, trunked, or sat-links that would block the avg. Monitor ?

Why was is it that, despite good freq. listings, I could usually get the (presumed) flight leader, but never seemed to get wing-men or espec. Ground-to-Air ? I always failed to *really* monitor a single flight in and out even though I thought I ought to be able to do so. Comments, criticisms would be most welcome. Maybe my goals were too high ?

Maybe a few final words. I know that this subject has gotten a little more sensitive to some since 9-11. Even one or two very good web-sites were voluntarily yanked by their owners post-9-11 so as not to seem to aid the Bad-Guys. I hope we are past this stage now and there can be some discussion on the subject.

Fantasies of Towel-heads with scanners who "learn stuff to get us" are just that -- Fantasies. Concocted out of panic at events of the past and ignorance of the conditions of today. OBL could have used his family's money to purchase The Taliban Forces in Afgan. all kinds of overseas, unblocked radio equipment of the most sophisticated variety I suppose. Yet all I ever heard of was one or two HF Broadcast freqs -- And frankly I never heard those -- just the jammiing sigs of the USAF !! It seems safe to say that Mil-Air Monitoring -- the Hobby has NOT weakened the nation or inhibited the national defense. So I'd like to invite any interested in the subject to answer my questions, make comments or sound-off as

they please.

TIA,

Reticulum

If the model is 20-300A it cannot.
Generally, anything after 5A4 cannot be touched
since it is not programmed into the CPU.

Mods.dk shows a 'razorblade' mod.
Besides, nothing but digital on the cell bands these
days anyway.
Oh, yeah, it's also against the law.....

<If C was not the most popular thing people <bought scanners for, they wouldn't have had <to cut out the cell frequencies, (since NO ONE <listens to that anyway) wouldn't have had to <also make it illegal years later to not listen to <cordless phone calls, and people wouldn't <always be posting here what scanners can get <cellular and cordless phone calls. Right?

wrong. As far as remember, they made listening to cell phones illegal before they ever started selling cell phones.

It was the cell phone industry that got Congress to pass that law, before they started selling cell phones, so that they could clam to their customers hat their cell phone conversatons were completely private and hat no one could overhear them.

my queston then. What about the people lving in Canada who can legally lsten to cell phones and (legally?) listen to U.S. cell telephone calls since the Canadians lve in border cites, lke Wndsor.Detroit, Buffalo/Toronto, etcetera.

in other words, U.S. citizens (analog) private cell telephone calls can STILL be legally monitored by Canadian citizens in Canada, as long as they don't cross the border. Therefore, the calls are not private and the cellular telephone industry commteed a scam and fraud when they told ther customers ther calls were completely private since no one could listen n on them since it is against the law to do so.

Source record: 35792

another question by me on the legality of cell phones beng "prvate".

1. what if a person in the U.S. uses their cell phone to call a person in Canada on their cell phone, and another Canadian (in Canada, where it's legal to listen to cell phone calls on a scanner) overhears both sides of the conversation on their scanner,

but the U.S. customer has been told that their cell phone calls are private and illegal to listen to.

what if the U.S. cell phone customer finds out they were listened to, and wants legal recourse against the Canadian for "violation of privacy" since he was told that his cell phone calls were totally private since it is against the law to listen to them?

2. what if the U.S. person uses their cell phone to call a Canadian wired telephone and a Canadan overhears it on their scanner from a U.S. cell phone site, while the Canadian remains in Canada.

3. What if a Canadian calls a U.S. cell phone, and another Canadan ovverhears it (both sides) on their scanner.

More than likely you'll need a dedicated outdoor scanner antenna mounted some height above the surrounding terrain. 30 to 50 feet up should work far better than the rubber ducky antenna on the handheld.

As far as more expensive=better reception, this is not necessarily so. If you're looking for a unit to receive shortwave as well as VHF/UHF, it will be more expensive than a standard VHF/UHF scanner, but the shortwave coverage is going to suffer. The shortwave reception of these units is, from what I understand, very poor compared to a regular HF receiver. You also need a much longer antenna than a standard VHF/UHF scanner antenna for decent shortwave coverage, and depending on the radio a long antenna may overload it. You're probably better off having a dedicated scanner with a VHF/UHF antenna and a separate shortwave receiver hooked up to a wire antenna.

>

Hi Piotr,

I am planning to do exactly the same like you describe above, i.e.
build a High pass filter that filters out anything < 30 MHz and
and in series with that a band reject filter 88-108 MHz (in future
depending on the need maybe even some more filters).

Do you have any experience with this?
I mean: Is it possible to cascade the filters just like that?
At least they should have a 'load' of 50 Ohms at the input and
output. If I would have one filter, it's no problem:
Antenna is 50 Ohm (input) and receiver is 50 Ohms (output).

But what if I want to cascade the filters? I reckon that I need
to put a 50 Ohms resitir in series with the separate filters...
Do you have any plans or schematics?

Cheers,
/Marc

Hi Marc,

I built high-pass 25 MHz filter because I had problems
with MVT9000 in low-VHF band (intermodulation).

After adding this filter between outdoor discone and
the scanner, the problems were gone.

You can find my design on:
http://www.geocities.com/bpiotrek/hpf25_e.html

I haven't try FM notch yet because I want to try building
my own circuit before spending money at store (building
circuits is a part of the hobby for me).

As for cascading the filters: it is possible but the resulting
characteristics will be a bit different than simple superposition
of the characteristics of both filters. I don't know how much
it could affect receiving.

I think it is very good idea to separate both filters with small
attenuator. The primary purpose of the device here is not
attenuating the signal but 'terminating' both filters so they can
work 'normally' (similar approach is very often used, for example,
in antenna amplifiers to suppress the results of variable load
impedance). Simple 3...6 dB attenuator in 'pi' or 'T' configuration
should do the job (50 ohm resistor put in series is not a good
solution because both filters should 'see' 50 ohms and not 50+50).

Cheers,
Piotr

Keep on listening! There are still tons of goodies to hear and will be for the next 20+ years. First unscrambled UHF radios will be in MilAircraft for many years, remember these planes must talk to ATC just like everyone else. The FAA has no money to retro-fit all ATC facilities with SatComs, Digital Encrypted Radios, or the last Captain Krunch Digital Decoder Ring!

I'm in Daytona Beach and listen to CAP when is active in our area (Orlando or the Space Center). Its kinda funny, once in a while they'll test the "secure link" but I think I've only heard it work one time, all the others it's failed. Doesn't say much for secure comms in our Military Fighters.....

I refuse to belive however that the military would put anything that would aid the terrorist on the clear and free airwaves. The military knows that we (hobbiest) and they (terroriest) are listening, comeone the military isn't that dumb... If they don't want us to hear (or understand) they we won't.

I've seen a few websites yank their listings in fear. Well then I guess the terrorest has won on those cases. But what's even funnier is this, the websites where I've seen frequency listings disappear the majority of frequencies are published in FAA documents which are available to the general public for FREE. No Pilots License needed to obtain. My website will stay up until a court order is presented forcing its removal. Remember people, the United States Constitution is still in effect and a legal document. In case you haven't read it a while I strongly suggest you take 5 minutes and read it. I have a copy on my website, you can view the Constitution at http://www.milaircomms.com/constitution.html.

For other information regarding MilAir comms, freqs and other info please visit http://www.MilAirComms.com

As far as not hearing all the comms relating to your CAP flights I would guess you're missing some freqs. Here in Flordia from to time there will be air-air comms in the 138-144 AM band. Next time CAP is active take some and set up your scanner to search 138-144, AM, 25 KHz steps

My $0.02 (only worth $0.01 in a Bush Economy)

MPEG Layer 3 32k 16,000 Hz Stereo is more than adequate for anything
that comes out of a scanner. Fraunhofer doesn't appear to be supported.

In the case of the CAP flights where 90% of secure test fail, you hear the CAP pilots ask OAKGROVE (callsign for NORAD) to "go secure". Then you'll hear a few seconds to a minutes worth of static. Then the pilots go back to 'unsecure' and let OAKGROVE know they didn't understand a thing said.....

George

3423. Trunk Tracking EF Johnson Multi-Net System

Newsgroup: rec.radio.scanner
Date: 2003-02-25 18:55:02 UTC
From: tom@k4nr.org
Message-ID: <bfd4951.0302251055.1796c5d3@posting.google.com>
Source record: 35706

Greetings,

I recently moved into a small town using the EF Johnson Multi-Net Trunking System. My Trunktracker II will not handle this system--will the Trunktracker III?

Tom

Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbyists who are
frequency hunters. You will find lists of Ontario radio frequencies that are
not listed on any web page, published in any scanner book (Haruteq or Scantrix)
or listed in the government frequency list (Industry Canada's TAFL). This list
is all based on research and the patience of the people who contribute to this web page.

3431. Re: hand helds for military VHF?

Newsgroup: rec.radio.scanner
Date: 2003-02-26 04:32:06 UTC
From: Teranews <N/A>
Message-ID: <c8f50f049c6dad531c2b244b414fbc7f@news.teranews.com>
Source record: 35714

As far as the USAF is concerned most Military VHF is limited to AM only and between 116-149 Mhz. This is mainly for communications to Civilian Aircraft. Many bases are responsible for civilian Air Traffic Control for aircraft in there airspace. Most USAF aircraft operate in the military UHF band 225-400 (AM). Most of the Land Mobile stuff uses commercial FM in the frequency range unique to that base or area.

"Jim Mac Donald" <jmacdon@mitre.org> wrote in message news:3E561171.418BFF72@mitre.org...
The Icom IC R2 will cover the Mil Com UHF band and
with selectable mode the radio will work either AM or FM
in the upper VHF AIR band, used by the worlds military 138 MHZ to 144 MHZ
in the correct AM mode.
May bases use 138 to 144 for land mobile base ops
in FM. Lots of radios will cover 138 to 144 Mhz but only in FM!
A air show demonstration team fly's with this band- VHF, so AM is a must!
Along with 220 to 400 MHZ AM.
If you attend air shows the R2 computer programming is great, to build
files for each of the different shows. There will br four (4) here in
New England this summer. Geography spread out, each show requiring a different
load out to the Icom IC R-2. I keep files for the shows on floppy disk then only have to add
several new freqs form the internet or gleaned form Monitoring Time's March issue, that lists
the up coming air shows and has the latest frequencies for the show teams!
check them out at:<http://www.grove-ent.com/> There is a "bargain bin" on the site
check out the great used scanners! And they post last years air show freqs!

The PRO - 43 by Radio Shack also covers UHF Mil coms 220 MHZ to 400 MHZ.
Check out <http://www.strongsignals.net> for more info and place a "want to buy"
ad on the classified message board, you may even find a used radio posted

Hello,

I am looking for the schematic of the JIM M75 preamplifier.
I want to experiment a bit with it by putting the M75 directly
at my discone antenna, up in the mast.

Therefore I need to power it remotely. Of course, I could as well lead
some extra wires to the top of my mast for the power of the M75,
but I rather want to power it over the coax cable if possible.
Because of this, I would like to have a look at the schematic.
I don't know it it is obtainable, so if anyone has it, or knows
how to get it, it would help me a lot......

Thanks in advance,
/Marc

You won't be able to pick up cell frequiencies with a BC-60. If I'm not mistaken, typically cell phones are in the 800MHz range. The BC-60 only goes up to 512MHz. You say your friend has a scanner that does what you want, you should probably get what he has and have him help you program it. Originally you said weather, rescue and police. For that the BC-60 will work fine, again as long as your law enforcement system isn't trunked. Good luck.

I have one and love it. Best scanner I own. (also the most expensive!)

As for modding it, well it cost too much for me to void the warranty by trying, but my gut reaction would be to say no, you can't mod it to receive the "extra" frequencies everyone asks for.

If anyone does attempt it, I'm sure there would be far more interest in a mod that opens up 700MHz than anything else.....

3443. FCC: Mandates Narrowband VHF/UHF FM Public Safety Radio Systems

Newsgroup: rec.radio.scanner
Date: 2003-02-26 19:54:19 UTC
From: Kenn <sfrankes100@yahoo.com>
Message-ID: <3e5d1b9b@snipnews.snip.net>
Source record: 35726
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner

The Federal Communications Commission, today, in FCC 03-34, released a Compulsory narrowbanding date for public safety communications systems that operate between 150 - 174 MHz, and 421 - 512 MHz.

* We prohibit any applications for new operations using 25 kHz channels, beginning six months after publication of the 2nd R&O in the Federal Register. -

* We prohibit any modification applications that expand the authorized contour of an existing station if the bandwidth for transmissions specified in the modification application is greater than 12.5 kHz, beginning six months after publication of the 2nd R&O in the Federal Register. -

* We prohibit the certification of any equipment capable of operating at one voice path per 25 kHz of spectrum, i.e. equipment that includes a 25 kHz mode, beginning January 1, 2005.

* We prohibit the manufacture and importation of any 150-174 MHz and 421-512 MHz band equipment that can operate on a 25 kHz bandwidth beginning January 1, 2008.

* We impose deadlines for migration to 12.5 kHz technology for PLMRS systems operating in the 150-174 MHz and 421-512 MHz bands. The deadlines are January 1, 2013 for non-public safety systems and January 1, 2018 for public safety systems.

Howard Goldstein, Senior Staff Scientist in
Ames' Thermosciences Division
HUNTSVILLE, ALABAMA

Space Shuttle special tiles made of same material used for human bone transplants!!

93-06-02 6/02/93: SHUTTLE TILE MATERIAL MAY HELP IN BONE TRANSPLANTS
Charles Redmond Headquarters, Washington, D.C. June 2, 1993 Jane Hutchison Ames Research Center, Mountain View, Calif.
http://spacelink.nasa.gov/NASA.News/NASA.News.Releases/Previous.News.Releases/93.News.Releases/93-06.News.Releases/93-06-02

RELEASE: 93-102 The same material that keeps the Space Shuttle from burning up when it returns from space may be useful in treating medical problems on Earth. Researchers from NASA's Ames Research Center, Mountain View, Calif., are working with physicians from BioMedical Enterprises Inc. and the University of Texas Health Science Center, both of San Antonio, to determine whether the Space Shuttle's ceramic surface insulation materials can be used as an implant for human skeletal reconstruction. "We're still a long way from having a bone implant that's ready for human use," said Howard Goldstein, Senior Staff Scientist in Ames' Thermosciences Division.
http://www9.pair.com/xpoez/faq/ctl.html

Hi ya'll. My name is Natasha. I'm a southerner. Down in Huntsville, Alabama, the home of Ames Research NASA, first stop off and new home for Nazi Werner von Bruan and all his buddies, and home of many aeronautical, astrophysical, weapons and remote viewing "small businesses", is now the home of enraged temps who have been screwed over one too many times by Labor Ready Inc., a Huntsville and national temp employment agency.

A 23 year old named Emanuel shot and killed four people yesterday in the front doorway and front lobby of Labor Ready, and wounded a 5th man in the leg.

There are many engineers temping in Huntsville, AL too, and not just hard pressed manual laborers in their 50s. The H1-B visa made a real job for an American engineer next to impossible.

My question: why did the police in Huntsville treat the boy, a mere 23, with such kid gloves? Was he part of some secret remote viewing training program, or some kind of H A A R P microwave facility?

The local Huntsville newspaper stated that Emanuel [see all the coverage below] worked on the line often at Browning-Ferris Industries (BFI), a waste removal and recycling coast to coast industry, just as big and unloved by many people at the temp agency Labor Ready [see all the lawsuits below please].

I think it is a poor reflection of our national media for such sloppy and insipid and misleading news to hit the wires. Shame on all of us for being such swine and sheep. We will deserve the slaughter in store for us, for trusting such monsters. The contract between BFI and the City of Huntsville states that "highly skilled workers" shall be employed by BFI to recycle waste. Was Emanuel "highly skilled"??

The witness, a 38 year old woman named Patricia Johnson [is she related to Wendell Johnson, Huntsville Police Spokesperson?], down in Huntsville, in her very contradictory and scramble and senseless account of the events that took place in Labor Ready, said that Emanuel should have been "a dish washer". Why were all of his victims, except one, in their late middle age?

Most temp manual laborers in the nation are under 25. Most partially employed engineers on defense contracts are late middle age.

natasha

LABOR READY INC -- slave shops http://www.slaverready.com/ The Anti-Displacement Project (A-DP) is proud to present this web site to get the word out about its aggressive, first-of-its kind campaign against America's worst employer, Labor Ready. Labor Ready is in the business of selling cheap, human labor at the lowest possible cost to its customers.

But selling labor cheap comes with huge human costs: Labor Ready workers are getting systematically ripped-off, exploited, and abused. It's modern day slavery and it's illegal. This web site will document how Labor Ready exploits workers in the Western Massachusetts community. Second, it will give a blow by blow account of how a small but determined group of low-income workers is going to abolish this mutli-billion dollar, multi-national corporation's shenanigans. Finally, it will show why our community needs a non-profit, worker-run Workers' Center as an alternative to for-profit hiring halls that treat workers as commodities.

The "Contingent Workers Fight for Fairness" </report/index.php> report was made possible by a grant from the FRENCH AMERICAN [French American] Charitable Trust, which has generously supported the work of the National Alliance For Fair Employment since its inception.

The growth of contingent work is a significant reason for stagnant or falling wages during the current economic boom. Median wages actually fell for the bottom 90% of the Massachusetts workforce between 1989 and 1999 according to a Northeastern University report. http://www.fairjobs.org/report/mass/summ.php

SUNDAY, DECEMBER 9, 2001
The Decatur Daily Opinion
"News from the Tennessee Valley"

LETTERS TO THE EDITOR Hiring BFI was bad decision THE DECATUR DAILY: The City Council is not known for being smart, although the ones now in office are not the ones who made a really bad financial choice in hiring BFI to take care of recycling for Decatur. According to an article this summer, the recycling program costs the city about $390,000 per year. Before it was given to BFI [Browning-Ferris Industries], Denbo offered to pay the city for that contract, instead of charging them. Do you call that good business on the part of the City Council?

What we need in office are good business people who know how to run a good business and manage money. Another thing -- I used to own a landscaping company and bought the appropriate licenses and paid taxes on all my equipment at the end of every year, took off all the grass clippings and branches and had to buy a special tag for the truck to carry my equipment. There were, and are, people who are mowing and landscaping yards who don't have licenses (some on the city payroll) and if you bring it to the attention of the licensing people, they say they don't have enough people to go out and check them.

It doesn't take a lot of time -- just drive around a little and you will see the ones who don't have the proper licenses. And yes, to mow yards, you do need a license for each city you operate in. If the licensing people would check, there would be a lot of income for the city. Linda Clemons Hartselle Huntsville and BFI As part of an overall integrated waste management system, Huntsville's Solid Waste Disposal Authority contracted with Browning-Ferris Industries (BFI) in May 1990 to begin a citywide recycling program. Households were issued containers for collecting newspapers, cans and other recyclables, and BFI sorted the materials at curbside. In 1996, BFI designed, constructed and began operating a new automated recycling facility, The Recyclery.

This first-of-its-kind facility enabled the company to process recyclable materials using skilled workers and state-of-the-art technology, and to hold down the costs of recycling. Each year, more than 2,000 Huntsville school students and 5,000 others tour the facility as part of the partnership's public education effort.

4 killed, 1 hurt in local job agency shooting

02/25/03
By PATRICIA STUMB and MARIAN ACCARDI
Huntsville Times Staff Writers

Four people were shot to death and one person was wounded shortly before 6:30 a.m. today at a temporary employment agency on Arcadia

Circle. About an hour later, shots were fired on Baker Road where police had cornered a suspect in the shootings, said police spokesman Wendell Johnson. Three were dead at the scene. One, a 55-year-old man, died in surgery at Huntsville Hospital before 9 a.m., said hospital spokeswoman Terri Bryson.

The other, who is 46 years old, suffered a minor leg wound, police said. Police did not immediately release the names of the five victims, but Johnson said it appeared that all were looking for temporary jobs at Labor Ready at 726 Arcadia Circle. Police Lt. Vince Dauro said the shootings followed an argument at Labor Ready. About 10 or 15 people were "standing around" when the pistol shots rang out, he said. Patricia Johnson, 38, witnessed the shootings and said the shooter also tried to kill her.

She said she was sitting in the lobby and saw a man whose name is Emmanuel get into a fight over a CD player. After Emmanuel got hit in the face, he reached into a jacket pocket and pulled out a gun. He shot the other man and a third person who was "trying to get them to take it outside." Reports on the scene said those victims were father and son. When the shots were fired, several people ran out the front door, Johnson said.

Others were sitting in parts of the lobby where they would have to run past the shooter to get outside, so they ran toward a closet and the bathroom. Johnson said she was right next to the shooter and froze. She said he turned the gun on her, pointed it at her chest and pulled the trigger. She heard a click, but nothing happened. He turned the gun on another man seated near them, pulled the trigger and it misfired again. At that point, Johnson got up and ran down the hall into a closet where three or four others were already hiding. She believes the other bystander ran as well. But the shooter kept after him, and the bystander was shot and killed near the entrance to the building. Johnson had a cell phone in her pocket and called 911. She and others stayed in the bathroom and closet until police said they could come out.

This morning, Huntsville police believed the shooting suspect was in an apartment on Baker Road near Oakwood Road. Police said the suspect apparently fired one or two shots from the apartment earlier this morning, but no one was injured. Police believed the suspect is in the apartment by himself, but they had not talked to him as of 8:25 a.m. Officers had seen some movement in one of the windows. The SWAT team was trying to evacuate an adult and two children from an adjoining apartment. A man who said he is a regular at Labor Ready said people start showing up at 3 a.m. to improve their chances to get jobs. He said he had just walked away from the group when the shooting started and did not see what happened. Johnson said she once worked side-by-side with the shooter on the line at BFI's recycling center on Triana Boulevard. She also knows he has done such jobs as washing dishes.

"He likes inside work," she said. Based in Tacoma, Wash., Labor Ready describes itself as the nation's largest provider of temporary manual labor for light industry and small businesses. The local office is next to the offices for the Alabama Department of Forensic Sciences, state troopers and Madison County sheriff's investigators. Arcadia Circle is off North Memorial Parkway just north of University Drive.

93-06-02 6/02/93: SHUTTLE TILE MATERIAL MAY HELP IN BONE TRANSPLANTS Charles Redmond Headquarters, Washington, D.C. June 2, 1993 Jane Hutchison Ames Research Center, Mountain View, Calif. http://spacelink.nasa.gov/NASA.News/NASA.News.Releases/Previous.News.Releases/93.News.Releases/93-06.News.Releases/93-06-02

RELEASE: 93-102 The same material that keeps the Space Shuttle from burning up when it returns from space may be useful in treating medical problems on Earth. Researchers from NASA's Ames Research Center, Mountain View, Calif., are working with physicians from BioMedical Enterprises Inc. and the University of Texas Health Science Center, both of San Antonio, to determine whether the Space Shuttle's ceramic surface insulation materials can be used as an implant for human skeletal reconstruction. "We're still a long way from having a bone implant that's ready for human use," said Howard Goldstein, Senior Staff Scientist in Ames' Thermosciences Division.

Message 6 in thread From: matt (matt@gigahertzelectronics.com) Subject: Re: Interesting emails between NASA workers. View this article only Newsgroups: sci.space.shuttle Date: 2003-02-25 05:24:31 PST "JF Mezei" <jfmezei.spamnot@vl.videotron.ca> wrote in message news:3E5AE05F.632FED0E@vl.videotron.ca... > matt wrote: > > you couldn't possibly be serious . you _expected engineers to bring long > > listings of data to management meetings_ ? then those managers should be > > competent engineers too to understand such data . how many competent > > engineers have you seen becoming managers and _staying_ competent after that > > , over the years ? believe me powerpoint is a disease that's more widespread > > Ok. So what is the context of those mission managemenmt meetings DURING a > mission ? Are the engineers really expected to pretty-up the data for > management, or are they expected to bring their listings and verbally explain > to the rest of the group what their findings are ? > > Or does the need to document absolutely everything force the engineers to > spaned time to make the data pretty for "the archives" ? My impression is engineers don't feel free to state their opinions at all within the NASA political environment . Did you see the remarks "why is management treating getting info like the plague"? Management wants to avoid any bad news and probably they're constantly being flooded with bad news from engineers , do you recall Mary Schafer's comment about how many such memos she's written , like everybody else ? Management is in place among other thing just to not allow engineers to blow these things out of proportion and delay everything forever. Management is the one responsible for the compromise when an engineer comes up with yet another problem which needs another 2 years and additional funding . Management is there to maintain the schedule etc.

My comment was tongue in cheek. Engineers do have to pretty up their
data or else either management doesn't understand it , or next time
they're not asked anymore.

Maybe you need to enter an asterisk before each frequency.

Yes, they are in the process of moving their office to a new location.

They expect to be back up and running next week, if not sooner.

One needs more than you or I would want to pay for the test equipment.

You should have a schematic of the radio also.

Check out G&G Communications web site, they repair scanners. They're a bit slow but are good at what they do.

This is a newsgroup, not a site. A site--generally accepted to be a short form of "web site"--is a series of html pages hosted by a specific kind of server and is always prefaced with the http:// or https:// protocol.

The actual URL, if you were to use one, for this usenet newsgroup would probably be news://rec.radio.scanner

Hi!
I have a Uniden Bearcat Scanner, model BC80XLT. Banks 3, 4 and 5 are locked out. Can anyone tell me how to unlock them? I can see the channels if I manually go through them, but if I go to scan mode, it only goes up to channel 20.

Thanks for any help you can give me.

If that is all you want a scanner for I will save you some money...

wife calls husband on his cellular using her cellular.

wife: honey please pick up some milk and bread on your way home
husband: ok honey, I will be home at 6 tonight
wife: ok I will see you then. have a great day
husband: you too. Luv ya
wife: luv you too

there ya go. that is 90 percent of the calls. the other stuff is
similar boring dribble.

I actually did not hear this conversation it is a replication. I
would never listen to cells since it is illegal in the US ; 0

You forgot the part that goes like this:

"Welcome to 1-900-4 HOT SEX. Press 1 for male dominance. Press 2 for hot lesbians under the sun. Press 3 for animal sex. Press 4 for- <beep>.

You've pressed 3 for animal sex."

"Hey thanks for watching Rover for me while I'm gone on vacation."
"Oh no problem. You're a friendly dog, aren't you. Oh Rover, you've got a bone of your own."

Name the movie that was from and you win a Coke.

By JOHN LeMAY
Staff Writer
BENNINGTON -- A resident listening to a scanner helped police find two Bennington College students, who were charged with stealing $30 worth of video tapes from WalMart Friday evening.
WalMart security personnel allegedly spotted Adrian Agredo, 18, of Brooklyn, N.Y., and Michelle Enemark, 20, of Topsham, Maine, stealing three videos, police said.

The security men saw the students drive away from the store in a red station wagon with Connecticut plates and were able to get part of the license plate number, according to Officer Larry Cole of the Bennington Police Department.

The security men then phoned police, Cole said.

A Houghton Lane resident listening to a scanner heard police describe the vehicle, and the resident called police after spotting the vehicle in the parking lot of the Sit and Spin laundry on Northside Drive, according to Sgt. Lloyd Dean.

Police went to the parking lot and took the students into custody. Three videos worth a total of $30 were recovered from the car, according to Dean.

"Enemark and Agredo were fingerprinted and photographed as required by law, and released with a citation for a court appearance on March 3, 2003 for the offense of retail theft," Dean wrote in a press release.

Sgt. Dean made the arrest, assisted by officers Cole and Michael Plusch.

Enemark and Agredo live in a Bennington apartment, according to Dean.

Outgoing mail is certified Virus Free.

Actually, you never know what you might hear. I've heard a friend's wife talking to her lover as they drove to meet each other, the wife of another person I knew discussing divorce tactics with her lawyer, a man discussing how he was going to kill his wife (she was later killed), two guys making prank calls to various local restaurants, a guy talking with his wife while on hold about how they were going to scam another pizza from a local Pizza Hut, a guy telling his girlfriend that he and a friend were on their way to rob a local store, and more. In other words, what you might hear ranges from the mundane and even silly to the much more serious.

intimate.

I once heard a guy on a cordless phone several years ago calling a phone sex line. The only thing I could think was, "why would anyone pay $4.95 a minute for this?" I think the guy was on for around 20 minutes, too. 20 X $4.95 = $99.00. That's a lot of scratch to pay for a dirty phone call. For that price you could have the real thing.

I hope you're wrong Bill, but you're probably right. Not too long ago a
thief was shot leaving a home. He survived and sued the victim of the
robbery for shooting him and won.

3473. GE Monogram portable question

Newsgroup: rec.radio.scanner
Date: 2003-02-27 16:19:27 UTC
From: netrunner <netrunner@cox.net>
Message-ID: <jUq7a.78376$P1.5136122@news1.east.cox.net>
Source record: 35656

I acquired a couple of old GE monogram (Ericsson), 10 channel, 5 watt portables, they're model SP2850's ..and would like some help with the LED light indications.

Next to the led indicator it says: "BUSY", "TX", & "BT"

The only thing I'm sure of is when I transmitting ..the led glows red ..which makes sense

While monitoring ..this led sometimes sporadically glows in yellow? Does this indicate other squelched traffic that I'd want to avoid transmitting during

I'm guessing BT is a low or charged battery indication ..but, I'm not sure exactly how to read it

If anyone's familiar with the monogram these sp2850's ..and can give me a quick run down of the led indications I'd really appreciate it ..feel free to email.

I'd also like to purchase an old manual for it ..if anyone has one they'd let go ..thanks, Ray.

You have about the shortest memory I have ever seen.

You obviously forgot about the 2002 Police Call CD already.

Let me refresh your memory - do a search on Supernews for a thread called "Thanks to Power House for posting Police Call 2002, however..." for starters.

There's your "dish" jackass... a nice piping hot plate of CROW. Bon appetit!

>millions and some one has bothered to write a repot on this shit what
>a waste of time

The thrust of the report was that it was a scanner enthusiast who had something important to do with the event.
The amount of money involved still makes it theft, which, last time I looked, was still a crime.
Any time good news takes place, it is worthy of reporting.
Linus

Forget about it. If he was "playing with the pots" it probably wasn't
working in the first place.

That's because someone who is running away from you is not a threat to you or your families' personal safety. The homeowner is a moron for shooting a fleeing suspect and is lucky he didn't go to jail for attempted murder. I kid you not. Some jackass running down the street with my VCR in his hand deserves plenty of jail time for it, yes, but my trying to kill him/her over it would be a bit extreme. I can always replace the VCR easily enough.

Do not trade with anyone at the following address:

1120 Laguna ST
#14
Santa Barbara, CA 93101

Phone 805-451-3042

This person has used the names Gabe Mariscal, Jeff Graham, and Jeff Kydd. At least two persons have been ripped off by this guy in trades. I would be leary of anyone in this area. He has used email addresses mojo-radio@cox.net, and gabe1972@cox.net . He has offered for trade a RS Pro 2006, Icom R75, RS Pro 43, and other equipment.

Radio comes with:
1) Mounting Bracket
2) Power cord
3) Original Mic
4) Schematic Diagram
5) Owners manual (14 pages)
6) Alignment instructions
7) FCC form 505 - Application for class C or D station license in the CB service (never used)
8) FCC form 555-B April 1976. Temporary permit - class D citizens Radio station.
9) Royce electronics corp. - You and your antenna pamphlet (4 pages).
10) There is a receipt in the box that came with the radio when I bought it. I am not sure if this is the actual receipt for the radio. It will be included. The receipt is dated 10 Sep 67 and is from Osco Drug. The charges are 9.99/40.00/tax=2.50/total=52.49

This radio is physically a 10 out of 10. I hooked it up the other day and the radio worked intermittently. Could be mic or cold solder joint. When it did work, I got 4 watts out and clear audio. This is a great find for the radio collector.

Email me for a pic @ cowboy67_NOSPAM_@casscomm.com

Take out _NOSPAM_

123 MP3 Sound Recorder is a powerful MP3 sound recording software. It records just any sound from any source available to your sound card. The resulting files can be saved in WAV-file and MP3-file format. 123 Mp3 Sound Recorder is able to record on-the-fly, that is, the recording result can be saved directly as mp3 file without an intermediate wav file. Sound quality of the recordings remains excellent.

A problem is that the EL (electroluminescent)
panel, used for back lighting the display, grows dimmer
with use and must be replaced.

The flicker is more likely due to a different cause, e.g.,
dirty contacts on the Dimmer pushbutton switch.

==========

99.00$ is a drop in the bucket. A close friend of mine (lady) just
divorced her husband,, and found out thru the disclosure part of the divorce
her husband had run up 63,000$ credit card bills for internet sex. Was using
most of his paycheck paying the bills. For that much money he could have
had a "lot" of real girl friends.

Yes, it's sad. I did purchase their software, which at the time was full of bugs, and growing pains. Tried to get help...what a joke! They get your money, then treat you like a second class citizen.

What goes around, comes around.

The flicker is more likely due to a different cause, e.g.,dirty contacts on the Dimmer pushbutton switch.

I once purchased a 2004 at an estate sale that had been in storage for years. When I got it home I discovered that the backlight didn't work but didn't worry about it as I hadn't paid much for it and thought I still had a bargain. After using it for about 6 months I noticed that the backlight had started to glow dimly and erratically so I took the contact cleaner to the switch and it lit up like new. RM~~

Hi all, I have a BC 895XLT and was using a RS antenna It is last yrs model, looked something like a Scantenna. I bought it as a kit. It came with Coax Well, it broke in the wind here in Upstate NY (I am assuming it was the wind). I am looking for a decent antenna, say, $60 or les. But am getting a little overwhelmed by all the choices and conflicting reviews on them. I live about 30 miles from Rochester, NY and want to get that area as well as close to home. Can anybody tell me the pro's and con's of my getting either ground plane or discone? Or any other type? I have a tri-pod on the roof so I don't need anything of that sort. Also the coax I have is 50ft of RG-6 I have the extra cable coiled up inside. Will that hurt reception? ANY help is greatly appreciated! Thanks, Steve

In my area (Denver) there were also radio and television commercials stating
that they weren't going to ask for that information anymore.

With the exception of the first purchase at a Radio Shack after I move to a
new town, I've been giving them fake addresses for the past fifteen years;
it'll be nice not to have to worry about coming up with a new name or
address every time I go to buy the most obscure thing; there are only so
many ways to keep a straight face and say "Yeah, sure, last name's 'Mehoff',
first is 'Jack'," or, "Hunt, Mike Hunt"

I asked the guys about the address thing the last time I was in and they
agreed that getting rid of that policy was a good idea. They mentioned that
at some point in the past, the intent was to build a single, large,
interconnected marketing database. It never happened.

Sure, I bought an RCA DVD player there about two years ago, assorted
scanners and CB radios over the years, but who gives a rat's ass about the
$1.19 spool of solder or the $0.29 little stereo/mono phono connectors?

Glad they won't be asking anymore. Now, if we could just get them to get
rid of some of the cutsie little radio controlled toys and stock more, well,
RADIO SHACK stuff, I'd be happy.

Steve,
I too have a ScanTenna, the one that is sold by www.AntennaWarehouse.com
and love it. Been into scanner for many years, have many antennas and
radios, you can see my shack at http://www.MilAirComms.com/shack.html.

If you replace your ScanTenna with a Discone you are going to be very
disappointed! I've had many different discones and not one (even one
that costs over $100!) would come close to the ScanTenna. For an
Omni-Directional antenna the ScanTenna is the best there is.

If you need something better then I would suggest a Beam such as the
ScannerBeam offered by AntennaWarehouse.com (about $60) or the Create
LogP. Antenna (about $300). I have both of these beams and the Create
isn't worth $240 more than the ScannerBeam but both are fine antennas.

George

Actually it might help depepnding on how it's coiled and where it's
placed.

Paraphrasing rom the Bill Orr book "Vert. Antennas" :

"Coax can be wound into circle 20X its diam. Any sharper bend will distort the
inner conductor. So RG-58 can be wound as tight as approx. 5", RG-8/U
about 10". An HF decoupling choke is about six turns and a VHF about 3 turns.
It is placed near the feedpoint at right angles to the radials."

Essentially it is an Inductor that filters RF and passes Audio better. In
effect, conduction along the center-conductor is unaffected while stray
RF along the coil is blocked. Used more for transmission than reception,
but ANY coil ANYWHERE on the feedline will have some effect so best
to do it right.

A practical note: Though the expert Orr says near the feedpoint I have
usually put them just outside the entry point to the house. Hung correctly they
act as a handy water trap to keep rain from trickling into your shack along the
coax line.

No. Incoming signals intended for your phone can be decrypted with
keys derived from information stored on your SIM-card.
Signals intended for other phones require other keys which
your phone have no access to.

He didn't believe me.
What he should do is take a course in electronics and his question would
have been answered before he ask.

Upset? Yes. Homicidal? No.

I'd just be glad to see them go, holster the weapon and be on the phone to
911.

Have anybody here ever heard of a cell phone kit for the scanners to get the
800 MHz frequencies?
A friend told me there is something you can buy for the older scanners to
get the higher freq.

You didn't mention what bands you listen to, but a discone is good for general coverage. A ground plane would tend to be a monoband antenna (unless specifically designed to be wideband), and wouldn't be as good for general coverage. I was pretty happy with the RS discone as a general coverage, omni-directional antenna.

Do yourself an incredible favor. Ditch the old rock bound set and buy a programmable. You can get them for $150 or less at any RadioShack on sale.

An even better choice is to find a local Ham shop that sells scanners - they are usually avid scannists themselves and know exactly what type of scanner is needed in your area, and many will even program them for you if you request it. Figure on spending no more than $250 max in most cases. You'll be glad you did this when/if your local agencies decide to move to different frequencies - much easier to type the new stuff in than it is to locate and pay for new xtals.

Mostly boring stuff but what a catch when you get a cop giving his supervisor the skinny on the latest officer involved shooting: (this was a few years back)

"yeah I know, we really screwed up."
"Am I correct in assuming all he had was a screwdriver in his hand?"
"Yeah, all he had was a screwdriver.... "
"motherf-----"
"What do I tell the media?"
"Don't tell them s--t. F--- 'em. I'm enroute now. I'll tell them we don't know anything yet, and won't for some time."
"OK cool. What about the family?"
"Jesus christ, all they give a s--t about is how much they get when they sue. Run 'em for warrants, maybe we'll get lucky."
"Roger that."
"Dammit Mark I'm getting too old for this s--t"
"I know sir. Me too"

Then the call hopped cells and I lost it.

Sure wish I had recorded that one... oh well. Turned out that the guy they shot was a gang banger sleazoid anyhow so no one in the media really gave the story much more than a glossover in the overnites. But had they heard what I heard... ohhhhhh boy... you can just about imagine the crapstorm that would have followed.
